Third Biennial Report

of the

State Tax Commission Of Utah

For the Years 1935-36

Third Biennial Report

of the

State Tax Commission Of Utah

For the Years 1935-36

3

Letter of Transmittal

To the Governor and the Legislature of the State of Utah:

We have the honor to transmit herewith the report of the State Tax Commission as required by law.

STATE TAX COMMISSION,

IRWIN ARNOVITZ, Chairman, R. E. HAMMOND, J. WM. KNIGHT, HOWARD P. LEATHAM.

Office of the State Tax Commission, State Capitol, Salt Lake City, Utah, November 18, 1936.

STATE TAX COMMISSION

7

TO THE GOVERNOR AND THE MEMBERS OF THE LEGISLATURE:

This is the third Biennial Report of the Utah State Tax Commission and covers the period from July 1, 1934, to June 30, 1936. In this report is presented a summary of the activities of the Tax Commission and statistical analyses of various tax laws, including the administration of these several tax laws. In order that this report may be as informative and valuable as possible, wherever difficulties in the administration of the laws have been encountered, these difficulties are enumerated. Wherever these difficulties can be corrected or removed by legislation such legislation has been suggested for adoption by the State Legislature.

The effectiveness of any law depends upon the effectiveness with which that law is administered. Effective administration depends in turn upon three general factors: the simplicity of the law, the means given the administrative body for enforcing the law, and the personnel selected for carrying out the administration. It is obvious that the more simple the law, the more simple is the problem of enforcing it. But no matter how simple the law may be, if adequate means of operation are not given, effective administration of even a simple law becomes impossible. In other words, given a workable law, sufficient funds for enforcement, a capable personnel and there is bound to be effective administration.

While the Tax Commission does not claim that the administration of the laws entrusted to it has been perfect, the Commission does feel that if some of the difficulties which it has faced, and is now facing, could be eliminated, definite progress toward a more effective administration could be accomplished.

The duties of the Commission during the past years have steadily increased. At the time the Commission was created in 1931, it was required to administer only the Property Tax, the Income Tax, the Corporation Franchise Tax and the Car and Bus Company Tax. It is now required to administer the following taxes:

| r roperty Tax | |
|----------------------------|--|
| Car and Bus Company Tax | |
| Income Tax | |
| Corporation Franchise Tax | |
| Sales Tax | |
| Motor Fuel Tax | |
| Cigarette Tax | |
| Oleomargarine Tax | |
| Insurance Tax | |
| Motor Vehicle Registration | |
| | |

Motor Vehicle Operators' License Gross Ton Mile Tax Inheritance Tax Beer Tax Public Utilities Regulation Fee Unemployment Compensation Tax: (Collection only.)

The 1933 session of the Legislature so changed the organization of the Commission as to provide for two "full-time" members and two "part-time" members, even though the Commission was faced with increased duties. These increased duties have not developed entirely from the enactment of new revenue measures but also from the fact that the Commission is directing more and more intensive administration of the existing laws. In other words, centralization of the administration of revenue laws has been fairly well accomplished and the important objective now is the more effective administration of the revenue laws. Much has been and is being accomplished in this direction, and while we feel that the authority granted to the Commission at this time is sufficient for the purpose, the Commission does not hesitate to say that complete results have not yet been achieved.

The ultimate in tax administration could hardly be expected by this time, when it is remembered that the Tax Commission has been in existence only since March 24, 1931. The process of assembling facts to guide administration is a long one; therefore, in many cases the Commission has had to approach the solution of its problems with meager and inadequate data. This handicaps efficient administration. This lack of data will be mentioned again when we take up the problem of taxation of mining companies and public utility companies where such a lack is particularly felt. However, the Commission does feel that the accumulated experience of the five years of its existence is gradually developing a more effective administration of the revenue laws of the State. The points at which administration has been made more effective and the points where more effectiveness is still required, will be discussed as we take up each of the taxes that we are administering.

The enforcement of the additional revenue laws required more employees and this in turn necessitated larger quarters. This necessity can best be shown by a comparison of the revenue collected during the fiscal years 1934 and 1936. Total revenue collected by the Tax Commission increased from \$6,250,000 in the fiscal year 1934 to about \$9,200,000 in the fiscal year 1936. Further, while collection of the Unemployment Compensation contributions does not become effective until January 15, 1937, it is important to note that with this item, it is estimated for the fiscal year 1937 the Tax Commission will collect approximately \$11,000,000.

One of the permanent improvements that has been effected is the enlarged quarters the Tax Commission now occupies. In addition to the first floor space, we are using that part of the basement coextensive with the quarters on the main floor. This expansion was not only necessary, but by providing better working conditions, resulted in better work by the employees. The use of the basement made necessary a great deal of remodeling as we had to build new walls and partitions, and install heating and air-conditioning apparatus as well as plumbing. The total cost of these improvements was \$9,891.04.

Another permanent improvement was the installation of seven validating machines in the main office and branch offices. These machines are a combination of cash register and bookkeeping machines. Their use protects the funds of the State as they provide a record of every cash transaction.

During the present biennium we have maintained branch offices in Provo, Ogden, and Logan, which have been of great convenience to the citizens of those localities. During the period of the year when we handle a large part of the motor vehicle registrations, we have also opened several temporary offices at strategic points in the State.

We here wish to express to the members of the Legislature our appreciation of the fact that they have made it possible for the State Auditor to conduct a continuous audit of the funds collected by us.

We also wish to observe that some of the matters discussed in this report may have occurred in the second year of the current biennium, but they are discussed in this report because of their importance.

In concluding the first section of this report the Tax Commission believes that a reading of the report will give some understanding of the operations of this department. We do not think, however, the printed report can give a complete word picture of our activities. Discussion will clarify the cold printed page, and the members of the Tax Commission welcome the opportunity to discuss tax pro-

8

posals and the details of our present administration of revenue laws with either the individual members of the Legislature or with legislative committees. It is our hope that this report and discussion will provide the Legislature with a better guide for action concerning revenue laws.

We proceed now to a recital of the activities of the Commission during the past biennium and to an enumeration of our findings during the course of those activities. We shall take up the separate taxes in the order they are enumerated in the opening paragraphs of this report on page 8.

PROPERTY TAX

The work of the Tax Commission in connection with property tax divides itself logically into two divisions: first, the assessment of mines and public utilities; second, the supervision of the work of the county officials in the assessment and collection of property taxes.

After the mines and public utilities have been valued by the Tax Commission, the assessed valuation is then apportioned to the several counties and is delivered to the county auditors of each county, who place the assessment upon the county rolls. Parenthetically, it may be said here that the valuation of this property assessed by the Tax Commission is 37.2 per cent of the total assessed valuation of the State. Some of the problems relative to the assessment of mines and public utilities will be considered first. For the purpose of assisting in this work, we have organized a valuation department, employing a geologist and accountants, including one familiar with mine accounting.

ASSESSMENT OF PUBLIC UTILITIES

Certain important changes have been made during the past biennium in the method of assessing property of public utility companies. Study has been made of the methods of valuation used by the assessing authorities in other states. The various methods that have been adopted by such states have been carefully considered, and those which seem to fit our own situation have been included in the assessment program conducted by the Commission.

The method of valuation of utility property is based upon the unit rule; that is, each utility is valued as a unit regardless of whether operated within one state or several states. The total system value is then allocated to the State of Utah on the basis of such apportionment factors as track mileage, investment in physical property, car mileage, gross revenue from operations, wire mileage, kilowatt hour production, kilowatt hour consumption, etc. The value thus apportioned to Utah is then equalized to the same basis as other property in the State is assessed. The assessed value determined for the State of Utah is further allocated to the various counties of the State largely on the basis of the investment in tangible property, track mileage, etc.

General economic conditions which affect a particular industry or business are considered in the valuation of any utility. The valuation of utility property is based on the capitalization of earnings at current rates of interest, market value of stocks and bonds, the Interstate Commerce Commission valuation plus a charge for betterments and less depreciation and retirements to date, book values of tangible property, and, whenever available, the rate bases established by the Public Service Commission. It is hoped that some expansion of the valuation department will be possible in order to provide for the making of engineering appraisals as an additional factor in such valuation.

Information upon which the Commission bases its assessment of utilities has been secured from various sources. The available data on some utilities has been extremely limited in the past, but this difficulty is being overcome by requiring utility companies to make annual reports to the Commission, giving operating statements as well as property account details. The first of these reports was required in the spring of 1936 and was based on 1935 operations. These reports, together with the rate bases established by the Public Service Commission, have keen bound and are kept on file in the office of the Tax Commission. Reports of utilities to the Public Service Commission of Utah have been made available to our accountants and have furnished considerable valuable information. Corporation franchise tax returns have also been studied to learn operating details. In addition to this, the annual returns of property have continued to furnish the detail of property inventory.

During the current year, a map project has been undertaken. Utility companies have been requested to provide maps showing the total utility system as well as detail maps of property within the State of Utah. It is felt that such maps will make possible a better understanding of the integrated operations of the larger utility companies. They will also provide information which will aid in allocating assessed values to the various taxing districts in the State, and will be of further assistance in simplifying the mechanics of recording the assessment of utility property.

The program of utility valuation, herein outlined, represents the basic principles of utility valuation now employed by the Commission. Similar methods of valuation are being used by many other states. The basic principles of such valuation have been approved by the United States Supreme Court on numerous occasions.

During the 1935 session of the Legislature a law concerning the method of valuation of utilities was passed which, among other things, provided that, "The State Tax Commission shall use such information (i. e. rate base) and tangible property values at the time it assesses for taxation purposes, the tangible property of said companies, and such assessments shall be in the same proportion to its true value in money as that of all other tangible property in the State of Utah." The Commission has sought to comply with this law in accordance with well established rules of law and in harmony with the opinion of the Attorney General concerning its interpretation.

As might be expected, various problems have arisen in connection with this assessment program. However, such problems appear to be administrative rather than legislative in their nature. While we realize that much is yet to be done, we confidently feel that consistent progress is being made both with reference to the current equalization of assessed values, and the maintenance of a proper equalization of assessment between individual utility companies as well as between utility property and other property in the State.

VALUATION OF CAR COMPANIES

Closely allied to the question of valuation of utility property is the valuation of car companies. It is a practice in the railroad business for railroads to lease certain types of cars from companies operating strictly as car companies; for example, the "A" Company will operate refrigerator cars and lease them to any railroad company requiring such cars. The rate of rental is the subject of contract between the car company and the railroad company. Generally the larger railroads hold stock in car companies. Railroad interest in the car company represented by the stock ownership is not considered in arriving at the value of the operating property of the railroad company, because the refrigerating cars are not operating property of the railroad, but on the contrary are operating property of the car company. The tendency of this practice is to reduce the assessed valuation of the car companies. The problem is having our serious attention, and some improvement will be made in the method of assessment of car companies.

TAXATION OF MINES AND MINING MACHINERY

Both the geologist and the mine accountant have had practical experience in the operation of mining properties. Together they are conducting a study of valuation of mining machinery and equipment.

During the period September 15 to December 15, 1936, the major mining properties in Beaver, Iron, Piute, Sevier and Tooele counties; the oil and gas wells in Daggett county, and other mines and mining properties have been inspected by these appraisers.

Section 80-5-32, Revised Statutes of Utah, 1933, requires county assessors to report to the Tax Commission the items of mining machinery and equipment located within their counties. It is difficult for an assessor who does not have particular training concerning valuations of mining machinery and mining equipment to make a report on those items and it is for this reason that we have undertaken the work of checking the amount and value of the mining machinery and improvements throughout the State.

On the basis of results to date, the following conclusions appear to be justified:

1. With a few exceptions mining machinery and improvements appear to have been generally underassessed.

2. Property above ground has been assessed at more nearly its actual value than has underground property.

3. As a result of the work of the Commission, considerable property not assessed in the past will be added to assessment rolls.

4. With only the present appraisers working on this project in connection with their other mine valuation work, it appears that the revaluation of the machinery and equipment of all of the mines in the State may not be completed lefore the close of 1937. Thereafter, due to the special nature of mining operations, constant checking will be required to keep mine machinery and improvement values properly equalized.

Assessment of Coal Lands

The most important classification of non-metalliferous mines is the coal mines. For that reason, we shall first discuss the assessment of coal lands and then proceed to an assessment of other non-metalliferous mines, including also other valuable mineral deposits.

The assessed value of coal lands in Utah, as determined by the State Tax Commission, is based upon such factors as accessible tonnage, quality of coal, proximity to transportation facilities, and distance from market. The original basis for the present assessed values was a geological survey made under the direction of the State Board of Equalization in 1918-20. During the past sixteen years, however, various changes in the assessed values of coal lands have been found necessary. Changing mining and economic conditions have occasioned minor modifications in classifications, and the volume of coal mined each year has made necessary annual deductions for the depletion of coal reserves.

During the period 1920 to 1936, the assessed valuation of Utah coal lands has decreased from \$10,680,744 to \$5,737,694. This decrease has been occasioned for the most part by changes in the economic conditions affecting the coal industry, the Federal Leasing Act which forbids the acquisition of coal lands by citizens individually or collectively, and the depletion of coal reserves.

Coal companies have been making vigorous protests of the assessments made on their properties, both coal lands and machinery and equipment. In 1936 there was a slight downward revision made by the Tax Commission in the valuation of coal lands. Only back-lying coal lands received the benefits of this reduction. During 1937, more detailed inspection of the value of their mining machinery and equipment will be made as we have already indicated in our report made above of the work of the valuation department.

Assessment of Other Non-Metalliferous Mines and of Valuable Mineral Deposits

In addition to the deposits of coal, there are various other non-metalliferous deposits that are assessed by the State Tax Commission. These deposits include native asphalt and related bitumens, cement rock, gypsum, stone, sand and gravel, bentonite, clay, silica, sulphur, salt, phosphate rock, alunite, calcite, fuller's earth, potash, oil shale, and natural gas. Since the last Biennial Report much has been accomplished in the assessment of these deposits. A survey has been conducted to determine the tonnage of gilsonite deposits. A valuation of stone quarries has been completed. Commercial deposits of bentonite, fire and tile clay, silica, calcite, and fuller's earth, which were formerly assessed at a flat rate of \$5.00 per acre, have been surveyed and assessed in accordance with the findings of such surveys. Some workable sand and gravel deposits have been added to the assessment rolls.

Taxation of Metalliferous Mines

The problem of assessing metalliferous mines is an involved one and has resulted in some serious disputes during the current biennium. We shall discuss this subject at some length.

The problem of placing an assessed valuation upon property is comparatively simple when the property to be taxed has a definite provable value. The same problem of tax assessment becomes extremely complex when the value of the property is indefinite and difficult to determine. We have found such complexity in the valuation of public utilities, but nowhere is this complexity more obvious than in mine taxation.

The mere mention of mine taxation brings to the mind of the tax administrator and the mind of the legislator the same uncertainty. To a degree the same uncertainty is experienced by the mine owner as well as the officials who administer the tax laws. The uncertainty is simply the result of the fact that neither the mine owner nor the tax administrator knows the actual value of the mine to be taxed.

It is true that for the guidance of the Tax Commission the Legislature has set up a formula for determining the valuation of a mine. That formula is stated in what is known as the Net Proceeds Law (Section 80-5-55) and the following sections of the Revised Statutes of Utah, 1933. However, unless one has accurate and exact terms to deal with, it is difficult to get a definite result from the application of the formula. The Legislature has attempted to make the formula precise, but adaptation of the formula to the facts in some cases is not nearly so precise.

The formula requires the keeping of accounts representing (1) the sums received from the sale of the ores and (2) accounts setting up the allowable deductions as set out in subdivisions 1 to 8 inclusive of Section 80-5-57, Revised Statutes of Utah, 1933. The difference constitutes net proceeds. This formula must be applied to all mining companies irrespective of their method of operation. Mining companies operate differently depending upon their business connections with purchasers of ores, generally milling or smelting companies. The methods of operation can be briefly stated as the following:

1. A mining corporation may sell its ores to a buyer, usually a milling and smelting company. If so, the mining corporation incurs no milling and smelting costs and, if the ores are sold at the mine mouth, no transportation costs. The allowable deductions of such an operator are confined to mining costs and the costs of permanent improvements.

2. Another mining corporation may mill ores in its own mill and reduction works and sell the concentrates to a buyer, probably a smelting company. If so, the corporation will be entitled to deduct milling costs and permanent improvements to the mill, in addition to the cost of mining and improvements to the mine.

3. A mining corporation may own its own smelter. A mining company so situated would be entitled to deduct smelting costs and the cost of smelter improvements in addition to the other costs enumerated in the first two types of cases.

(A) Such a mining corporation may smelt only its

(B) In addition to smelting its own ores, it may smelt ores sold to it by other mining companies; that is, what is known as "custom" ores. Such ores may be sold to it by a subsidiary or affiliated corporation or by an entirely unrelated mining company.

In all these types of cases, except the type designated "3B." the statutory formula is comparatively simple of application, and the facts and figures to which the formula is to be applied are easy to ascertain. The sales price of the ore and the actual cost of mining and improvements are ascertainable from the records of each company.

But where a situation exists, such as is catalogued under division "3B," above, it is questionable whether the actual cost of reducing its own ores separate from the "custom" ores is ascertainable. Can the total of the costs for smelting both types of ores be broken down so as to show the "actual costs" of milling and smelting its own ores?

We have tried to solve this problem because the United States Smelting Refining & Mining Company, one of the larger mining corporations in the State is operating in precisely the manner outlined as plan "3B." The solution of this problem becomes quite important, for if we allow too much or too little as costs, an injustice will be worked on either the State or the company.

We have the testimony of the company in question that it is impossible for it or anyone else to compute "the actual costs." It states that with much labor and by the use of averages and formulas it can determine the "probable costs," but that the results would be uncertain and that assuredly they would not be the "actual costs." These facts were developed in hearings conducted in 1936 when the Tax Commission challenged the method that the company had adopted in making its returns based upon gross proceeds.

As we have stated, that particular company operates under plan "3B." There is this additional qualification, it does not operate its mill and smelter "in connection with its mine." The reduction works, consisting of mill and smelter, are not on the mine property, nor adjacent to it, nor even near it. They are located approximately ten or fifteen miles from any of its mines. When they were built by the company no deduction for the cost of the reduction works and the mills was claimed, upon the theory that they were not operated "in connection with the mines," as is required in subdivision 4 of Section 80-5-57, in order to entitle the mining company to make the deduction.

The company assays, reduces and smelts its own ores. It similarly treats "custom" ores. The company maintains separate divisions within itself. It has a mining division, a milling division, a smelting division, a refining division and, we suppose, a selling division. Under the statutes, in order to determine the value for taxation purposes of its own mines from which ores are taken, the company is required to determine:

(1) The gross proceeds realized from the sale or conversion of the ores into money or its equivalent.

(2) The deductions that it may properly take.

But the problem of determining both of these factors is complicated by reason of the fact that the company reduces and smelts not only its own ores but also its "custom" ores. The company does not sell its ores until after they have been refined. No sale or conversion into money or its equivalent takes place until then. It contends that it cannot set up as the figure for gross proceeds the sum of money which it obtains for the refined product. It contends that gross proceeds should be determined before that point in the production and sale of the ore is reached. It claims that the milling division may take the ores at the mouth of the mine from which the ore was extracted and credit the mining division with the value of the ores as determined by some method of inter-company settlement which it has adopted. 'In the annual report which this company files with the Tax Commission, the figure so obtained is termed "gross proceeds received from the sale of ore."

This figure is defended by the company as just and accurate because it is based upon a milling and smelting charge, which is the same as was charged by another milling and smelting company for the ores from this same mine, when the mine was owned by another company. When the present company purchased the mine, it simply retained the old settlement contract as the basis of settlement for the ores of that mine.

The method of determining gross proceeds by an intercompany transaction at the portal of the mine is defended by the mining company upon the ground that unless they are permitted to consider the gross proceeds as being gross proceeds realized at the most extreme point; that is, when the metal product becomes finally the manufactured product. It does seem that there ought to be some logical point in the progress of the ores to the finished product at which gross proceeds should be determined.

The method of settlement used is the company's own, and there is no supervision over it by the State. The company does not make an actual sale of the ores at the portal of the mine, and for that reason, the Commission is of the opinion that gross proceeds should not be fixed as of that point. If the mining division would make the sale of the ores to a purchaser in nowise connected with the company, and in a competitive field, the Commission would be required to accept as gross proceeds the figure at which it sold the ores, even though it sold its ores at a loss.

Just as there is a problem in determining at which point in the progress of the ores toward the finished metal product that gross proceeds shall be ascertained, so is there a problem of determining the deductions to which the mining company is entitled. This problem arises from the fact that the company ores and the "custom" ores are mixed. As we have already indicated, the company states that it is difficult to know the costs justly attributable to the reduction and smelting of its own ores when the ores from its own mines and the "custom" ores are mixed. Therefore, they eliminate the necessity of determining "actual costs of sampling, assaying, and reducing and smelting the ores and extracting the metals and minerals therefrom," by an inter-company transfer of the ores at the portal of the mine. The company considers that transaction as a "sale," and, of course, if the ore is sold in its native state, there is no need of determining the assaying, reducing and smelting charge.

The law has been so interpreted as to allow the mining division of the company to make a so-called sale of the ores at the portal of the mine to the milling division of the company. The Board of Equalization considered this to be a practical solution of the problem, and, therefore, accepted that method. These transactions were similarly treated by the Tax Commission until the year 1936.

In 1936 this company filed its return on the same basis as heretofore. The return showed an assessed valuation of approximately \$2,600,000. The Tax Commission declined to accept that valuation and set up a valuation of approximately \$5,600,000. The Tax Commission insisted that it was concerned only with the gross proceeds realized from an actual sale of the ore, or at the least. the value of the metals extracted from the ores after they had passed through the smelting process. The Commission was of the opinion that the milling and smelting profits should be reflected in the value of the mine. The company keeps separate records for each of the different divisions of its operation, and the profits which are made by the milling and smelting divisions are not allocated back as a profit from the mining operation. The result is that the milling and smelting profits are not considered by the company to be any part of the gross proceeds of the mine. Accordingly. a lesser tax upon the mine results.

The Commission was of the opinion that the sum realized from an actual sale should be considered as gross proceeds and also directed that the company was entitled to deductions for only its "actual costs of milling and smelting." The Commission was of the opinion that if no other method of determining those actual costs were available, then at least averages and formulas to fix those costs could be used. The company protested the additional valuation placed upon their mines. Extensive hearings were held at intervals during the months of June, July, August, and September, 1936. Finally, the Commission and the company agreed that the company would accept an increase in valuation of approximately \$1,500,000. Neither the company nor the Commission is satisfied with the result, and hence, we have set out the case in detail as a guide to legislative action.

We feel that legislative action is necessary because of the fact that the construction placed upon the law by the past administrative action of the Board of Equalization and the Tax Commission is such that if we sought to change it now, without a change in the statute, a judicial tribunal might hold that the Commission is bound by its earlier interpretations and could not now change. A court might reach such a conclusion because of a legal doctrine known as "contemporaneous construction of an administrative board." By this doctrine the hands of the Commission might be so tied as to prevent it from making a change. It was for this reason that the assessment for the year 1936 was amicably adjusted rather than permit it to go to court. It must not be thought that this situation exists, or can be made to exist with only this one company. This situation is possible in a great number of cases.

We do not recommend any legislation that would seek to prohibit or limit the right of these companies to pursue this method of operation. As a matter of fact, such operation might even produce a greater valuation upon mining property, because the profit of the milling and smelting operations would be reflected back to the mining operations. We believe that it should be. If one mining operator has developed a more economical operation than another operator and receives greater net proceeds, we believe that the ultimate consideration is the amount of the net proceeds by whatsoever method of operation derived. One business man may have a more economical method of operation and may have made a greater net profit for income tax purposes; his tax is then based on that greater net profit. No deduction is allowed to him because he has a more economical method of conducting his business.

In order to provide the solution of the problems raised by the method of operation we have just described, we recommend an addition to the present law which will contain specific instructions as to the point at which gross proceeds are to be determined. Persons may differ as to whether this point should be after the ores are removed at the mine mouth or when they are taken through the milling or the smelting process, or, indeed, after an actual sale of the ores, at whatever point it may occur. We have already stated that in the case cited, the Tax Commission contended for the gross proceeds realized from an actual sale of ores or at least the valuation of the metals extracted after they had passed through the smelting process.

This viewpoint is contrary to the recommendation made in our last Biennial Report (bottom of page 23) to the effect that where "there is an integrated operation of mining and also milling and smelting, that the mine owner be permitted to provide for the valuation of the ore at the mine and to permit the deduction of any reasonable costs (not exceeding actual costs) of transportation, smelting, refining, etc." Some members of the Commission now doubt that this recommendation should have been made by us; whereas the others still believe it to be proper. Therefore, we respectfully submit this matter to the Legislature for its determination.

As the law now stands this company could organize a separate corporation for the purpose of operating the mining property. This subsidiary corporation could sell its ores to the parent milling or smelting corporation and then the State would be required to accept as gross proceeds the sum which the parent corporation paid the mining corporation for its ores. Where a mining company is a subsidiary of a milling and smelting company, it might sell its ores to the parent corporation at a price that would tend to greatly reduce the gross proceeds of the mine.

Since this simple device of establishing a subsidiary corporation may be adopted, it would be advisable to provide that the Tax Commission could inquire into the reasonableness of the price paid for the ores. Even if such authority were granted to us we still would have difficulty in executing it, because that is the work of experts, and in almost every instance such experts are in the employ of the major milling and smelting companies.

There are many such mining corporations subsidiary to milling and smelting companies. One smelting company has as many as ten subsidiary mining corporations. We do not mean to charge that the subsidiaries were established to further tax avoidance, but we merely point out that tax avoidance is possible through the use of this device.

We believe that more authority should be granted the Tax Commission to permit it to make full inquiry into the price received for the ores of such subsidiary mining corporations when they sell their ores to a parent milling or smelting company. An amendment should be added in substance as follows:

"Where a sale is made by a mining corporation of its ores to an affiliated corporation or company, the burden of proving that the price received was a fair one shall rest upon the mining corporation. For this purpose the Tax Commission shall have authority to make such investigations as it deems necessary. In the absence of satisfactory proof that the price received is a fair one, the Tax Commission is authorized to determine from the best information available, what the gross proceeds should have been from the sale of the ores."

Then in making an audit of such a mining corporation, we could require that the figures set up on the books of the company as "proceeds" should be supported by test checking to determine their accuracy. This will assist in determining whether or not the accounts kept in these affiliated corporate transactions are fairly recorded. An auditor experienced in mining technique and accounting can judge the fairness of the price received for the ores, providing that he knows something of the operations of that particular mine. Then if it should be determined that a subsidiary mining corporation was making an unfair sale of its ores to a parent corporation, the Tax Commission could insist that the sale be set up at a fair price. Although there might be some difficulty in administering this proposed amendment, nevertheless, we recommend that the law should be so amended as to permit the making of this

The case that we have discussed at length illustrates two possible avenues that may be used to lessen the valuation of a mine based upon net proceeds. Repeating, they are:

(1) By an intercorporate transfer of the ores by the mining division to the milling or smelting division, when one corporation controls both the mining and the milling and smelting divisions, and

(2) By the sale of the ores to an affiliated corporation, in which case there arises the possibility of making for a price less than the market price.

In our opinion both of these possibilities of tax avoidance should be eliminated from the law.

We have made suggestions as to how these possibilities could be eliminated. We make no claim that these objectives cannot be reached through other amendments to the law. Some such amendments have been suggested to us and no doubt will be presented to the Legislature and more adequately than we could hope to present them through the medium of this report.

While the case above referred to did not reach the courts, there is another case regarding valuation of mining property based upon net proceeds that is being litigated at the present time. It is the case of the Utah Copper Company.

This case revolves about the method the company used in making its return of net proceeds of the mine. Relying upon the provisions of the statute, the Tax Commission contended for a method different from that used by the company. The variation in the two methods used would make a difference in taxes charged against the company for the year 1935 of approximately \$100,000, and for the years 1936 and 1937 of approximately an additional \$300,000, or a total in taxes of \$400,000 for the three years. The company paid its taxes for the year 1935 and sued to recover the amount of taxes paid which were based on the net proceeds of the mine. The District Court of the United States allowed recovery in the amount of approximately \$80,000, plus interest. The recovery allowed was not to the full extent of the amount that the company contended it had overpaid, namely, approximately \$100,000. We are of the opinion that the case should be appealed to the United States Circuit Court of Appeals and steps are now being taken to perfect the appeal.

We repeat again the two following recommendations made in our last Biennial Report:

(1) On page 24 of that report we stated that "One very serious objection to the present net proceeds tax is its lack of stability, resulting in a wide fluctuation in public revenues." To eliminate that objection a bill was prepared, which would have tended toward a more uniform collection of property tax, based upon the net proceeds of a mine. The recommendation was that "instead of using the multiple applied to the net proceeds for one year, the multiple be applied to the net proceeds for several years." A bill was introduced into the Legislature which sought to carry out

this recommendation. The bill was passed by the Senate but was not acted upon in the House. We again recommend the passage of a bill such as Senate Bill No. 109, introduced in the 1935 Legislature.

(2) On page 23 of that report we stated: "It is quite possible that by the time the counties in which these mines are situated, are in a position to sell the property free of redemption the mines will be exhausted." To carry out this recommendation Senate Bill No. 29 was introduced into the Legislature and was passed by both the Senate and the House, but for some unaccountable reason the bill was never engrossed and was not signed by the presiding officers of the Senate and the House and transmitted to the Governor. For that reason the bill failed to become a law. We again urge the Legislature to pass such a bill so as to remove the possibility of loss of taxes where a mine becomes exhausted before the taxpayer loses the right of redemption.

If a law similar to the above mentioned Senate Bill No. 29 is enacted, then the following recommendation may not be of great importance. However, if such a law is not passed, it is suggested that the statutes be clarified so as to make definite the extent of a lien which is acquired by a tax on a mining claim. It appears that the statutes are somewhat deficient in providing for the extent of the lien that is acquired by the levy of a tax based upon net proceeds. Section 80-5-57 states that the tax is a lien upon "such mine or mining claim."

Serious problems might arise unless the assessment made by the Tax Commission definitely indicates the property against which the net proceeds tax is to become a lien. The statutes should provide that this assessment should be a lien upon all the mining claims of the company, owner or lessee, or at least a lien on all the claims which are contiguous. A more serious problem arises when the property of the mine is located in two counties. If the assessment based upon net proceeds is sent to one county, that being the one from which the ore is extracted, then that assessment never becomes a lien against the mining claims located in the adjoining county, even though the claims in two counties are contiguous. Assuming that the extraction of the ore in the one county makes valueless the claims in that county, then having a lien against only the

worked-out claims would be of no benefit. While the tax should be payable to the county from whose claims the ore was extracted, still the assessment should also constitute a lien against the claims located in the other county.

We also wish to call the attention of the Legislature to another item that may require correction. A mine owner might invest in a new mill and the amount invested would be deductible from gross proceeds. A year later the mining company might dispose of that mill to a subsidiary of its own, or to a third party, and receive a substantial sum in payment thereof. Under the law as it now exists, the amount so received from the sale of the mill would not be included in the gross proceeds. Such a process might be repeated from year to year and substantially cut down the amount of net proceeds.

It would seem that there should be included in the definition of gross proceeds, a provision that "there shall be added to gross proceeds any sum or sums that may be received from the sale of property by the mining company (that is, mill, etc.) the cost of which has been previously allowed as a deduction in arriving at the net proceeds of a mine.

SUPERVISION OVER LOCAL PROPERTY TAX

And now to the other branch of the property tax work of the Tax Commission. The responsibilities of the Tax Commission in this regard are set out in Section 80-5-46, Revised Statutes of Utah, 1933. Subdivisions 3, 4, 5, 6, 7, 8, 9, 10, 11, 12, 13, 14, 18, 21 and 22 of this Section detail these responsibilities and we refer the reader to the statutes rather than restating them here. Sufficient it is to say that the statutes grant broad powers and duties. The Tax Commission has relied principally upon its individual members, its secretary and two or three stenographers to accomplish all these duties.

The members of the Tax Commission have been able to visit occasionally with county officials and to hold conferences with them in order to advise them of their responsibility in connection with the property tax. However, the visits of the members of the Commission are not frequent enough to allow for the giving of detailed instruction on the administrative detail of the several county officers having to do with the assessment and collection of taxes.

Wherever cooperation has been given to county officials, assisting in the supervision of their work, noticeable benefits have been obtained. As one example, we refer to the educational campaign on property taxes which we conducted in cooperation with the county officials, and which we shall hereinafter discuss. We submit that the results could not have been obtained by individual action of the counties.

Since the advantages of this supervision are apparent, we recommend the extension of this supervision in the manner indicated. While the cost of such supervision, covering salary and traveling expenses of an auditor, would amount to approximately \$5,000 per annum, we do recommend that the legislative appropriations for real property tax purposes be sufficient to permit the employment of such a traveling auditor.

The cost of establishing the valuation department has made it imperative to economize in other departments. Much more has been expended on the property tax department than was contemplated in the beginning of the biennium, but we believe that its accomplishments to date justify the expenditure. Further discussion of the cost of the administration of the property tax will be taken up later in this report.

REVALUATION OF IMPROVEMENTS

In connection with real property valuation work of the Tax Commission, we herein name the several projects that have been undertaken and note their progress. In the year 1932 this Commission undertook the work of revaluing all improvements in the State. Several of the counties had been completed, when we were able to obtain the assistance of work projects by the Federal Government. With that help the work has been in progress ever since. The program contemplates the adoption of a standardized formula founded upon sound engineering and construction principles, and the application of this formula to the various types of building improvements in the State. Four years of usage of the formula and the revision thereof have practically assured the engineers in charge of this work that they are substantially correct. The work has progressed until at the present time the following counties and portions of counties have been revalued:

| Beaver | | Morgan | |
|--------------------|---------|------------|------|
| Box Elder | | Rich | |
| Cache | | San Juan | 1934 |
| Carbon | | Sanpete | |
| Davis | | Uintah | |
| Emery | | Utah | |
| Grand | | Washington | |
| Iron | | Wayne | |
| Kane | | Ogden City | |
| | | tial) | |
| Salt Lake City (Pa | artial) | · | |

Varying results have been achieved in different counties; a county that had uniformly low valuation has had its valuation raised and the reverse is true where a county had uniformly high valuation.

It sometimes happens that improvements are erected but they are not mentioned in the tax rolls. This occurs frequently in those parts of the counties outside of city limits because counties do not require issuance of building permits and for that reason there is no record of the new improvements. It would be particularly helpful in the assessment of property if all counties would require the issuance of building permits so that a record could be made of new improvements throughout the county.

REAL ESTATE REVALUATION PROGRAM

Further efforts to equalize valuations throughout the State have been made. This is in line with the work that is being done on the revaluation of improvements.

We have completed a reclassification of farm lands in Daggett, Wayne, Washington, Beaver, Davis and Tooele counties, and a similar program is now in progress in Utah and Emery counties.

Further efforts to equalize valuations throughout the State made necessary the revaluation of real estate in Salt Lake City. Complaint has been made that wide discrepancies exist. It was thought that the agency best fitted to carry out this work was the Salt Lake City Real Estate Board, and, in conjunction with the Board of Commissioners of Salt Lake County, the Tax Commission entered into a contract with the Real Estate Board to entirely revalue all real estate in Salt Lake City. After conducting the tax delinquency campaign, it was thought that there was considerable additional information on the records which it would be necessary to analyze before an intelligent attack could be made upon the problem of the delinquency. Fortunately for the State, the Tax Commission was able to secure a work project financed by the Federal Government which undertook a complete study of the tax delinquencies in the State. The findings of this study will be published hereinafter under the heading, "Tax Delinquency Study."

ADMINISTRATION OF THE EMERGENCY LEGISLATION FOR REDEMPTION OF PROPERTY

During the 1933 session of the Legislature it became apparent that property owners would require some relief on delinquent taxes. Accordingly in that session and in the 1935 session of the Legislature, laws were passed reducing the rate of interest on delinquent taxes of certain years. Likewise, the penalties were waived. The taxpayer was given a limited time to take advantage of these concessions made by the Legislature. Some consideration might be given to the desirability of reenacting this legislation. Another concession was made in that the period of redemption from the sale for delinquent taxes for the years 1928, 1929, 1930 was extended to January 1, 1936. A further extension of the period of redemption could be obtained by paying an amount equal to the taxes four years delinquent.

The Legislature also enacted a law permitting county officials to make adjusted settlement of property taxes in those cases where the taxes had been originally assessed by the county assessor. This exercise of authority on the part of the county commission was subject to no review.

The Legislature provided that county commissions should submit to the Tax Commission monthly reports of such action as they took affecting tax adjustments. The reports submitted in most instances were fragmentary, and we are certain that the report shows only a portion of the total cases handled and the total amount of delinquent taxes adjusted. Examination of the report shown on page 144 will reveal the irregular way in which the terms of the law were carried out in each of the counties. In one county the taxpayer was not able to secure any reduction, while in another county, the reduction in taxes accorded to a taxpayer were quite generous and easy to obtain. In short, there was an entire lack of uniformity in the administration of the law as between the several counties. Similarly the Tax Commission was vested with authority to make adjusted settlements of delinquent taxes in all those cases where the property had been orginally assessed by the Tax Commission. This authority has been exercised by the Commission not more than two or three times.

It is natural that the application of these so-called emergency laws to existing conditions would result in some confusion. The net result of the application of this emergency legislation is that there are bound to be questions raised as to the validity of the acts of either county commissioners or of the other taxing officials. These questions will be raised in connection with the determination of the validity of title to property.

Questions have been raised as to the validity of an auditor's tax deed issued at the expiration of the period of redemption. We believe this matter to have been settled by the decisions of the State Supreme Court in the two cases of Robinson vs. Hanson, 75 Utah 30, and Hanson vs. Burris, 46 Pacific (2nd) 400, which latter case was appealed to the United States Supreme Court and affirmed. The law as we believe it to be established, is that an auditor's tax deed is valid unless irregularities have occurred in any one of the steps leading up to the issuance of the tax deed; that is, the assessment or collection of the tax and the advertising of the delinquency, and issuance of the certificate of sale.

In view of the fact that many questions have been raised, it would seem that to give stability to the property tax laws of the State, a time should be fixed beyond which the acts of the municipality in collecting the taxes or the acts of the county officials in issuing tax deeds could not be questioned. It seems that the question should some time be finally settled. If the Legislature should adopt a provision limiting the period during which the auditor's tax deed is subject to attack to one year following the date of the May sale of the year in which the deed is issued, it would seem to bolster up the provisions of the property tax. At the 1936 meeting of the Bar Association of the State of Utah, held in December, it adopted a resolution recommending the following legislative action:

1. Those persons who have purchased from the county property which has gone to tax deed would at the end of one year be able to rest securely on the title that they acquired from the county;

2. Many persons whose property has gone to tax deed and who still live on the property, and in many in-

stances have so lived on the property for five, ten or fifteen years, would realize the jeopardy of permitting their taxes to remain unpaid and would pay them:

3. It would likewise discourage persons from permiting their property to go to tax deed knowing the effect of the issuance of a tax deed.

COUNTY-OWNED PROPERTY

No discussion of this emergency legislation would be complete without some mention of the vast amount of property, ownership of which has passed to the several counties of the State. Delinquent taxpayers have permitted their property to go to tax deed, relying upon the reluctance of the county commissioners to force them to vacate their property in times of stress. The result is that the title to much property is now vested in the several counties of the State. The amount of such property is being determined by a tax delinquency study which we conducted, the results of which we hope to have available by February 15, 1937. Mention of this study will be made hereinafter.

We have urged county officials to do their utmost to return this property to the tax rolls. The beneficial effects of such action would be twofold: The delinquent taxes would be paid and property again restored to the tax rolls would bear its just proportion of taxes in the State.

The acquisition of so much county-owned property has brought to the foreground certain problems affecting the propriety of this property being exempt from taxation. With this question comes the problem of whether or not this class of property could be made subject to taxation, assuming that it should be desirable to do so in the light of the constitutional provision on exemptions. Section 2 of Article 13, State Constitution reads in part as follows: "The property of the United States, of the State, of the counties, city, town, school districts, municipal corporation * * *

Some Problems That Have Arisen in Interpreting This Exemption Statute

This constitutional provision on exemptions, Article 2, Section 13, is carried into the statutes by Section 80-2-1, Revised Statutes of Utah, 1933. It sometimes becomes a close question to determine when this exemption applies to property standing on the tax records in the name of the State or an agency of the State, such as the State Land Board or a county, or in the name of a county or a municipality. There is a question as to whether or not an assessment should be made of property which has gone to tax deed but which has not yet been sold at the May sale. Similarly, there is the problem as to whether or not the property should be assessed after it has gone to the May sale. We are inclined to the view that the property cannot be assessed, excepting in those cases where the period of redemption does not expire until after January 1st of any given year. If it is not assessed, it gives an advantage to the owner or purchaser of property which has gone to auditor's tax deed, because that parcel of property escaped taxation for the year in which it has gone to auditor's tax deed. We recommend this matter for legislative attention. However, this constitutional provision is so broad that the remedy may lie only in a constitutional amendment.

TAXATION OF STATE AND MUNICIPALLY-OWNED LANDS WHICH ARE SUBJECT TO A CONTRACT OF SALE TO A PURCHASER

When property is acquired by the State or the county, these units endeavor to dispose of the property and sometimes sell it under a contract of sale. Whenever the property is so sold, it is provided that only the equity of the purchaser is subject to taxation. Serious question of policy is raised as to whether a person purchasing property from the State should pay a tax based upon only that proportion of the assessed value which his equity in the property bears to the whole value in the property, or whether he should pay taxes upon the whole assessed value of the property just as other taxpayers do. It would seem that he should be taxed upon the same basis as other property owners.

USE OF COUNTY-OWNED PROPERTY BY THE COUNTY

Sometimes a county acquires property which it is unable to dispose of for several years and possibly not at all. Of course the property was deeded to the counties by the auditor's tax deed, not only in consideration of the county taxes but also in consideration of the city, school district and State taxes. Therefore, all four taxing units have an interest in the property. The question then arises whether the county can use the property for its own advantage without paying anything to the other taxing units. That is, whether the county can use it for some beneficial purpose of its own or rent the property and secure the income therefrom.

The Attorney General has ruled that such property cannot be rented. Section 80-10-68, Revised Statutes of Utah, 1933, paragraph 3, reads: "All money received from the sale of property made pursuant to the terms of this section shall be paid into the county treasury and the treasurer must settle for the same as in case of money received for redemption. Money received as rents and installments of purchase price should be apportioned to the State and other taxing units interested in the taxes last levied upon said property, in proportion to their respective interest in said taxes." This section of the statute seems to state, by implication at least, that these properties can be rented. At least, if the property is rented, the statute provides for the disposition of the money received as rents. In such a case all the interested taxing units receive their portion of the sums paid.

But let us assume that the county desires to use this property for some purpose and since it has title (at least as trustee for itself and the other interested taxing units) would proceed to devote the property to that purpose. Has the county such a right? Recently, Salt Lake County demolished a piece of county-owned property and is using the salvage material to repair some property belonging to Salt Lake County. Neither the city, State, nor the school district secures any revenue or any compensation from the county for the use of this property. This is true even though the tax interest in that property of any of the other taxing units is greater than that of the county. It is recommended that this subject be given legislative attention. We have already pointed out that the constitutional provision on exemptions is very broad and it may require a constitutional amendment to remedy this situation. One reason is that while the examples that we have given may be considered only a trivial diversion of the property to the use of one of the taxing units, it is conceivable that the same practice may be indulged in, in cases where property has a considerably greater value.

EXTRA-COMMISSION ACTIVITIES

Some of the activities of the Tax Commission might be called extra-commission activities. These extra activities are not duties enjoined upon the Tax Commission by positive mandate of law, but which the members of the Tax Commission feel are vital to the more efficient administration of the tax laws of the State. Two such activities may be mentioned. One is the educational campaign on property taxes that was carried on under the supervision of the Tax Commission during the months of November and December, 1935. The second is a tax delinquency study. This second is a W. P. A. project under the supervision of the Tax Commission.

Tax Educational Campaign

This campaign was equivalent to what is known in business as an advertising campaign, and its purpose was to inform the taxpaying public of the benefits to be derived by taking advantage of the emergency tax legislation passed by the Legislature. The rate of interest on property taxes for the years 1928 to 1932 inclusive had been reduced from 8 per cent to 2 per cent and the penalty and interest were waived. The benefits of this legislation were to expire January 1, 1936. It was important to convey this information to the taxpaying public so that they might gain the full advantage of the legislative concessions. The Tax Commission took the lead in publishing the information.

It was expected that the cost of such a campaign would approximate \$5,000. To secure this sum the Tax Commission appealed to the local taxing units throughout the State, and they responded by contributing approximately \$4,500. However, as the educational campaign developed, it became apparent that the sum raised would be insufficient. In addition, it became evident that the services of several employees of the Tax Commission would be required to successfully conduct such a campaign. This meant a cost to the Tax Commission of approximately \$3,000 which had not been contemplated when the Tax Commission submitted its budget for the ensuing biennium to the State Legislature.

Nearly every known medium of publicity was used to draw the attention of the public to the terms of the emergency legislation which was to expire shortly. Informed home owners and property owners, numbering approximately 18,000, took advantage of the reductions granted and paid in the neighborhood of $2\frac{1}{2}$ million dollars into the treasuries of the twenty-nine counties of the State. The details of these payments are shown in statement No. 83 on page 190.

The Commission is indebted to those organizations and persons who assisted in the publicity campaign. We had the full cooperation of the public officials and the officials of the municipalities, as well as the newspapers throughout the State. Thanks are also due to the following persons who delivered effective talks over the radio: Governor Henry H. Blood; Dr. Elmer G. Peterson, President of the

Utah State Agricultural College; Dr. Franklin S. Harris, President of the Brigham Young University; Senator Herbert B. Maw; Mr. Tracy Welling; Mr. Werner Kiepe; Mr. C. Clarence Neslen; Senator Ira Huggins; Dr. L. John Nuttall; Mr. N. L. Morris; Mr. Frank Evans; and Mr. Carl Badger.

Tax Delinquency Study

While this educational campaign served to call attention to the problems of tax delinquency, this problem is still very much of an unchartered field. Available data were insufficient. The Tax Commission was able to take advantage of the opportunity of securing such data through the facilities of a W. P. A. project.

The objective of the study was to secure the data as guidance for future activities in solving the problem of tax delinquency. Admittedly, the delinquencies throw heavier burdens upon those who are paying their taxes. Payment of the delinquencies would encourage prompt payment of current taxes, and what is more important, would lessen the amount required to be raised from current taxation.

The only part of the study that is in tabulated form shows the tax delinquencies for the years 1932 to 1935 inclusive. A footnote appended to this table, which is found on page 191, states that the figures are tentative, pending final tabulation.

The study will show not only the tax delinquency for the years 1932 to 1935, but also the delinquency dating as far back as 1928, because some of the property which had gone to sale for those years was not deeded to the county by reason of the fact that the taxpayer had obtained an extension of the period of redemption. In addition the study will show the amount of property which has been deeded to the county auditor's tax deed.

We deem it advisable to submit the results of the study to date, and as soon as additional results are tabulated, we shall publish them. We believe, therefore, that one avenue to tax relief lies in the solution of the problem of tax delinquency. With all due dispatch the Tax Commission will embark upon a program of attempting to solve that problem. We hope for beneficial results within the year and certainly within the biennium.

STATE TAX COMMISSION

PRIORITY AS BETWEEN GENERAL TAXES AND SPECIAL IMPROVEMENT TAXES

One obstacle in the way of clearing up the general tax delinquency is the doubt that exists as to the priority of the lien of general property taxes over special improvement taxes levied by municipalities for the purpose of providing municipal improvements. Formerly the same doubt existed as to the priority of general property taxes and drainage district taxes. This problem was settled by the recent case of Hanson vs. Burris, which was decided by our Supreme Court and affirmed by the United States Supreme Court.

This case held that general property taxes were entitled to priority over drainage district taxes. In that case, the Court makes some rather sweeping statements as to the priority of general property taxes over all types of special assessment taxes. However, the Court did not give any effect to the specific statute on the subject found in the chapter on special assessment taxes. (Section 15-7-48, Revised Statutes of Utah, 1933.) That statute first states that the lien of special improvement taxes shall be prior to all other liens, except the lien of general taxes. It then continues with the statement, "and such liens shall continue until the taxes are paid, notwithstanding any sale of the property for or on account of a general or special tax." It is this last phrase which throws some doubt upon this question of priority.

The universal theory of taxation requires that general property taxes be granted priority, and it is, therefore, submitted that this section of the statute should be so amended as to state that the lien of general property taxes shall be prior to the lien of special improvement taxes.

COLLECTION OF TAXES UPON IMPROVEMENTS PLACED UPON LEASED LANDS

A factor making for delinquency is the uncertainty of the procedure in collecting taxes. Such uncertainty exists in cases where taxes are levied against improvements erected on leased ground.

Specific examples where this might occur, are where a summer cottage is built upon government owned land or where expensive tipples and other improvements are erected upon the coal lands, leased from the United States.

In such cases the statute provides that "every tax due upon improvements upon real estate assessed to others than the owner of the real estate, is a lien upon the land

and improvements." (Section 80-10-3, Revised Statutes of Utah, 1933.) The tax upon improvements may be enforced as a lien upon not only the improvements but the land as well. If the land is privately owned and not exempt, the problem of collecting the tax assessed against the improvements is a simple one, because the lien can be enforced against the land and the tax collected.

But if the improvements are erected upon leased ground belonging to the United States Government or to the State, and that land is exempted from taxation, it would appear that the lien could not be enforced as against the land. Recourse is solely against the improvements.

The problem becomes more serious if during the period of redemption the taxpayer should dismantle the improvements, sell them and leave nothing but the vacant property. While the State might obtain a personal judgment against the taxpayer, there might be no property to satisfy the judgment. It is advisable to prevent the possibility of such an occurence by requiring that taxes upon improvements built upon leased property where the lien of the tax upon the improvements does not rest upon the land should be collected in the same manner as taxes upon personal property are collected.

TAXATION OF PERSONAL PROPERTY

Assessment of Inventories on a Monthly Average Basis

Section 80-5-4, Revised Statutes of Utah, 1933, provides that "the county assessor must assess property to the person by whom it was owned or claimed * * * at 12 o'clock A. M. of the first day of January, etc."

The question has often been raised as to whether there might not be an assessment of inventories of merchandise by taking a monthly average inventory rather than inventories as of January 1st. Unless the constitutional provisions prohibit, it could be. There are court decisions construing constitutional provisions such as ours, that hold that it is possible to assess inventories of merchandise on a monthly average basis and still assess other personal property at its value on a given day. It has been held that that system does not create an unequal burden of taxation.

We, therefore, recommend that the statute should be so amended as to permit of the assessment of stocks of merchandise by taking a monthly average rather than value as of January 1st. Of course this monthly average would have to be based upon the inventory of the year preceding the year of assessment.

STATE TAX COMMISSION

Unequal Assessment of Personal Property

For taxation purposes, merchants report the amounts of their inventory of merchandise at some percentage of its true value. This percentage varies from 10 per cent or 15 per cent to 60 per cent or 65 per cent of the value of the inventory. Such variations are harmful to the administration of the personal property tax laws. Uniformity is very much to be desired.

To secure this uniformity we recommend the adoption of a law similar to that of the State of Massachusetts which requires the State Tax Commission to submit to the county assessors of the several counties the figure of gross inventory taken from the income or corporation franchise tax return of the taxpayer.

Thus, the assessors would have before them the statement of inventory which the merchant returned in his tax return to the Tax Commission. This would require considerable additional work on the part of the Tax Commission because one such card would have to be filled out for each merchant submitting a tax return and the cards would have to be sent to the county assessor where the merchant made his return. In Massachusetts this law is known as the Red Card Law.

If the Legislature should adopt the average monthly basis of assessment to be applied to inventories of merchandise, there still could be adopted a variation of this type of law to give to the assessors the information that they would desire. The Tax Commission could submit to the county assessor those figures taken from the tax returns which would reflect the average monthly inventory.

CHANGES REQUIRED IN EMERGENCY LEGISLATION

Jane.

The attempts of the Legislature to give relief to the taxpayer have resulted in some legislation which has become difficult to interpret in certain situations; for example, Section 80-10-59, Revised Statutes of Utah, 1933, which permits a delinquent taxpayer to obtain an extension of one year in the period of redemption, has caused some difficulty.

The original idea of this statute was to give the delinquent taxpayer one year in addition to the regular four year period of redemption, during which time he could redeem his property from delinquent taxes. As a condition to obtaining this extension for one year, the delinquent taxpayer was, however, required to pay an amount equal to the taxes which were four years delinquent, plus accrued

36

interest and penalty. That proviso was easy to apply when there had accumulated only four years of delinquent taxes.

Last year the Attorney General ruled that a taxpayer could take advantage of this section of the law only once. A ruling dated December 15, 1936, reverses this position. It is anticipated that such recurring extensions in the period of redemption will cause great difficulty in the keeping of records of the county treasurers, and will result in much confusion. The Attorney General recognizes this when in an opinion, dated November 30, 1936, concerning the interpretation of this statute, he states:

"The highly controversial nature of the problem simply serves to emphasize the need for clarification of the statute."

We recommend, therefore, that this proviso be repealed, so that taxpayers owing taxes beyond four years delinquency will be required to redeem their property.

An alternative, if the statute should not be repealed, is that at the least it should be amended to provide that a taxpayer could secure such an extension in the period of redemption but once.

RECOMMENDATIONS

Reciprocity Permitting This State to Sue for Taxes in the Courts of Another State When We Permit Other States to Sue in Our Courts to Enforce Their Tax Laws

We should have a statute allowing other states to sue in our courts for the purpose of enforcing their tax laws, providing that those states granted the same rights to us. At the present time South Carolina is the only state which has such a statute.

This is necessary because it frequently happens that a taxpayer leaves the State, owing a tax. We have a recent example where a taxpayer removed his property from the State, owing a tax of \$1,000, which cannot now be collected. If we could sue in the state to which the taxpayer has removed, we could recover the tax debt.

DRAFTING TAX MEASURES

The rule of law is that: "The repeal, without a saving clause or provision, of a statute imposing a license tax or fee takes away the right to collect an unpaid tax which is due, even though a suit to collect the tax is pending." STATE TAX COMMISSION

It would appear, therefore, that when the Legislature intends to pass a revenue law to supersede an existing law that the Legislature should not provide that the provisions of the existing law be repealed, but the new law should state only that it is superseding the present existing law. It is submitted that the statute should be so drawn that existing tax liabilities under the law which is being repealed should be preserved. This would mean that persons who were liable for the tax, but who did not pay when they should have paid, would have no advantage over those taxpayers who had paid their taxes. In spite of the repeal, the existing tax liability could be enforced.

PRIORITY OF TAX CLAIMS OVER OTHER CLAIMS IN LIQUIDATION

There seems to be some doubt as to whether or not a claim for taxes has priority over all other types of claims when a business concern is liquidated. It would seem advisable to remove this doubt and a general statute should be enacted which would give priority to claims for taxes over all other classes of claims.

PARTIAL PAYMENT OF PROPERTY TAXES

A law was passed in 1933 permitting installment prepayment of current taxes, and allowing discounts, beginning at 5 per cent during the month of January and on a decreasing scale until the rate of 1 per cent was allowed during the month of September. In 1935, the statute was so amended as to provide that prepayment could be made but no reduction in the amount of tax was permitted for prepayment, even though payment was made several months before it came due. We recommend that the law should be so changed as to give an inducement to the property owner to pay his property tax in advance. There are several reasons for this conclusion.

In the first place, one of the worst features of the property tax is the fact that it all becomes due at one time. This is one of the most important reasons for tax delinquency. We believe that delinquency can be minimized by allowing a reasonable discount for prepayment.

It is probable that the Legislature eliminated the discount for one or both of the following reasons:

1. It was thought that only large taxpayers were taking advantage of the discount.

2. That the discount rate was excessive.

39

As to the first of these, it is quite true that it was mainly large taxpayers who were making prepayments. However, some of the average taxpayers were beginning to make prepayments and it is logical to believe that if the provisions of such a law were properly publicized that more of them would do so.

As to the second reason, it is our opinion that the discounts originally allowed were excessive. We are not in a position to state the precise amount of the discount to be allowed, but we belive the reduction should be large enough to induce the property owner to begin the payments of his property tax early in the year before the taxes finally become due.

VETERANS' EXEMPTIONS

Under authority granted by a constitutional amendment, the Legislature of 1931 enacted a statute which was slightly changed in Section 80-2-4 and 5, Revised Statutes of Utah, 1933, granting, under certain conditions and limitations, property tax exemptions to disabled war veterans, their widows and minor orphans.

The wording of the statute has been interpreted to apply to all war veterans who have incurred disability either in service or from any other cause after being released from service. We call this to the attention of the Legislature in case the intent of the law was to exempt only those disabled in service.

We also call to your attention, Statement Nos. 51 and 52 on pages 142 and 143, showing that the number of persons allowed exemption and the valuation exempted, has increased three hundred per cent since 1931. As the law was probably enacted to give relief to disabled war veterans, we wish to mention the fact that it benefits only those who have property.

In case any bill is introduced regarding homestead exemptions, we recommend that the veterans' exemption law be considered a factor in the results of additional property tax exemption.

HOMESTEAD EXEMPTIONS

The subject of homestead exemption has been widely discussed during the past few years. The Legislative Committee of Nine has prepared exhaustive reports based upon extensive data. The study is so detailed that it would serve no useful purpose for us to have attempted to cover the same ground as the Committee has.

STATE TAX COMMISSION

USE OF MAP REFERENCE NUMBERS IN ASSESSMENT OF REAL PROPERTY

In the assessment of real property it is necessary to set out the legal descriptions of the property and oftimes it is lengthy and complicated. In California a statute has been enacted enabling the assessing authorities to substitute map reference numbers for the legal descriptions of real estate. The result is a material saving of time as well as clarification of property descriptions. The necessity of making such a change in our own State is illustrated by the fact that in the assessment of large utility companies it is often necessary to copy forty or fifty pages of legal descriptions of real estate. When it is remembered that this description must be copied by the Commission and then reported to the counties and the companies, and then it must be placed on the assessment rolls by the county officers, and finally goes on the assessment notice that is sent to the taxpayer by the county officers, it will be seen that it is a long, complicated task. It would seem desirable to simplify the work by the use of map reference numbers in place of the long legal descriptions of real estate which would otherwise be necessary.

ASSESSMENT OF OMITTED PROPERTY

Section 80-5-17, Revised Statutes of Utah, 1933, permits the assessment of property which has not been assessed. This covers property assessed by the county assessor; by judicial construction, the statute has been so extended as to apply to assessments made by the Tax Commission. (Union Portland Cement Company vs. Morgan County, 64-Utah-335.)

That case was decided in 1924 and since that time Section 80-5-47 was enacted. (In 1931.) That section seems to permit the Tax Commission to "make an assessment or reassessment on any property which it deems to have been over-assessed or under-assessed or which it finds has not been assessed."

It would seem that this grant of authority would cover almost any situation but it would not seem to include that type of case where an error in the assessment was made by reason of a mistake, lack of facts or a misrepresentation of the facts by the taxpayer. It would also seem advisable to know whether this power of the Tax Commission is limited to the period when it is "equalizing the valuation of the taxable property in the several counties of the State" or whether this power may be exercised at other times.

Such an example might be where a property tax assessment based upon net proceeds is made upon the property of the mine. A taxpayer makes a return, files it by February 15th and the Tax Commission audits it. These audits must be made hurriedly, because the assessment must be sent out by the first Monday in May. It sometimes happens that more detailed audits will disclose errors which were not apparent on the first inspection of the books. But this inspection may not be made until sometime later and it might be too late to put the assessment on the rolls. If these corrections could be made at any time during the year or within a three year period of limitations, then there would be a more certain check upon these returns.

In order to meet both of these situations it would seem advisable to amend Section 80-5-47 by making the following amendment:

By inserting after line 8 of the section, the following: "whether the original jurisdiction to make an assessment of property was with the county assessor or the Tax Commission. This authority shall extend to making new assessments, or adjusting assessments previously made, where it is found that no assessment, or an improper assessment was made because of an error, mistake, absence of the facts, or misrepresentation of the facts by the taxpayer. Such new assessment or adjusted assessment may be made at any time during the current year or at any time prior to three years from December 31st of the year for which such assessment was made."

Whenever such an assessment or reassessment is made, there is some doubt as to whether interest and penalty would apply as of the date when the assessment is made or whether they would refer back to the year for which the assessment was made. It is submitted that interest and penalty should refer back to the year for which the assessment was made. For that purpose we recommend that the following amendment to this same statute be made:

After the word "treasurer" on line 16 change the period to a comma and add the following: "and assessments so made shall bear interest and be subject to the same penalty, as though the assessment had been made during the current year for which the assessment was made."

STATE TAX COMMISSION

INDIVIDUAL INCOME TAX

The yield of the individual income tax in the fiscal year 1935 was \$212,704.70; in 1936 it was \$498,918.95. The increased collections for the fiscal year 1936 are due principally to the amending of the Income Tax Act by the 1935 Legislature which lowered the allowance for personal exemptions and credit for dependents, increased the rates of tax, and repealed the provision providing an offset credit for taxes paid on property in Utah.

The following examples show by comparison the effect of the increase in tax rates, the elimination of the property tax offset credit and the lowering of personal exemptions. Filing fee of \$1.00 has been disregarded in the examples below.

Comparison of the Change in the Rates of Tax

1931 Act

1931 Act As Amended By 1935 Legislature

| Rate | | Taxable Income | Tax | Rate | Taxable Income | Таз | Increase In Tax | Percentage of Increase |
|--------|-------|-------------------|------------|-------|-------------------|----------|--------------------|------------------------------|
| 1 % | 1st | \$1,000 | \$10.00 14 | | \$1,000 | \$10.00 | \$ None | None |
| 11/4 % | 2nd | 1,000 | 12.50 20 | % 2nd | 1,000 | 20.00 | 7.50 | 60% |
| 11/2% | 3rd | 1,000 | 15.00 30 | % 3rd | 1,000 | 30.00 | 15.00 | 100% |
| 13/4 % | 4th | 1,000 | 17.50 40 | % 4th | 1,000 | 40.00 | 22.50 | 128% |
| 2 % | 5th | 1,000 | 20.00 50 | % 5th | 1,000 | 50.00 | 30.00 | 150% |
| 21/2% | 6th | 1,000 | 25.00 50 | % 6th | 1,000 | 50.00 | 25.00 | 100% |
| 3 % | 7th | 1,000 | 30.00 50 | % 7th | 1,000 | 50.00 | 20.00 | 66% |
| 31/2% | 8th | 1,000 | 35.00 50 | % 8th | 1,000 | 50.09 | 15.00 | 42% |
| 4 % | 9th | 1,000 | 40.00 50 | % 9th | 1,000 | 50.00 | 10.00 | 25% |
| | & Ot | her Incom | e | & | Other Incor | ne (| | |
| | | \$9,000 | \$205.00 | | \$9,000 | \$350.00 | \$145.00 | 70% |
| 1/3 o | ffset | credit | 68.33 | | | None | | |
| Net ? | Fax] | Payable | \$136.67 | | | \$350.00 | | 156% |

In the above illustration it is assumed that taxes on property in Utah were paid in the amount of at least \$68.33.

A married man with two dependents, having a net income of \$5,000, paid taxes on property in Utah in the

42

44

amount of \$100. The computation of the tax is shown below:

| Original Law Net Income \$5,000.00 Less: | As Amended | \$5,000.00 |
|--|--|---|
| Personal Exemption _\$2,000.00 Credit 2 Dependents _ 800.00 Net Taxable Income \$2,200.00 Tax at 1 % 1st \$1,000 Tax at 1 % 1st \$1,000 Tax at 1½% 2nd 1,000 Tax at 1½% on bal. 200 3.00 Total Tax Due Before Credit \$25.50 Credit for Taxes paid on Property in Utah \$.50 Net Tax Due \$17.00 | \$1,200.00 600.00 Tax at 1% 1st \$1,000 Tax at 2% 2nd 1,000 Tax at 3% 3rd 1,000 Tax at 4% on bal. 200 | 1,800.00 \$3,200.00 \$10.00 20.00 30.00 8.00 \$68.00 None \$68.00 |

A single person having a net income of \$1,200.00, paid personal property taxes in the amount of \$5.60. His income tax would be computed as follows:

| Original Law | As Amended |
|---|---|
| Net Income\$1,200.00Less:Personal Exemptions1,000.00Net Taxable Income\$200.00Tax at 1% on \$200.00\$2.00Tax Before Credits\$2.00Less Credit for Taxes Paid.66Net Tax Due\$1.34 | Tax at 1% on \$600.00 \$600.00 \$6.00 \$6.00 \$6.00 \$6.00 \$6.00 |

During the fiscal year 1935, 82,601 returns were filed and for the fiscal year 1936, 56,932. The reduction in the number of returns filed for the year 1936 is due to the

STATE TAX COMMISSION

amendment of the Income Tax Act, eliminating universal filing.

As a result of the auditing of the returns filed and an investigation of the books and records of taxpayers, deficiency assessments collected during the fiscal year 1935 amounted to \$5,549.39 and during the fiscal year 1936, \$6,872.75. These deficiency collections cover mainly returns for the years 1933 and 1934 and were computed under the law before the amendments of 1935. The audit of the returns filed under the amended law will naturally result in greater deficiencies and will require a more thorough inspection and audit. Our present force of auditors assigned to the auditing of income tax returns is inadequate to properly complete the work required and, appropriations permitting, we propose to strengthen the auditing department in order to audit and thoroughly check all income tax returns.

During the past year the Federal Income Tax Law and regulations of the U. S. Treasury Department have been amended so that every person (except non-resident alien individuals) who is required to file a return with the Internal Revenue Department is also required to file a duplicate of his return with the collector's office at the time the original is filed.

The Tax Commission, through the chief executive of the State has secured permission to inspect and check all individual income tax returns filed with the local collector's office of the Internal Revenue Department.

The information which will be secured from the federal returns is desirable for the purpose of checking state income tax returns with those filed with the federal government.

RECOMMENDATIONS

Annuity Payments

The buying of annuities the last few years has grown to a point where it is imperative that attention be given to this particular type of investment from an income tax standpoint. The Federal Government recognized the necessity of amending the Federal Income Tax Law so that a portion of the annuity payment received each year would be considered as taxable income during the year in which the payments were received.

The present Federal Law provides that where an annuity is payable in annual installments, there shall be in-

45

cluded in gross income only such portion of the amounts received in any taxable year as is equal to 3 per cent of the aggregate premiums or consideration paid for such annuity, whether or not paid during such year. As soon as the aggregate of the amounts received and excluded from gross income equals the aggregate premiums or consideration paid for such annuity, the entire amount received thereafter in each taxable year must be included in gross income. The provisions of the Federal Law may be illustrated by the following example:

"A" bought in 1933, for \$50,000 consideration, a life annuity, payable in annual installments of \$5,000. For the calendar year 1936 he would be required to include in gross income \$1,500 of the \$5,000 received during that year (3 per cent of \$50,000) \$3,500 being exempt. If "A" should live long enough to receive as exempt \$50,000, then all amounts he receives thereafter under the annuity contract would be included in gross income.

The State income tax laws should be amended so as to conform with the Federal statutes so that if any part of an individual's income is received from annuities that individual will be required to report as taxable income a portion of such annuity income.

Personal Exemptions and Credit for Dependents

The State Income Tax Act should be amended to provide for the proration of personal exemption and credit for dependents based upon their status during the year instead of their status as of the end of the year. The present law in some respects works a hardship on taxpayers, for example:

A taxpayer is married and has no dependents. His wife dies December 15th of the taxable year. His status at the end of the year is that of a single person and under the present law he is entitled to only \$600.00 personal exemption, even though he was married eleven and one-half months of the taxable year.

Exchange of Information

The Income Tax Act should be amended so that the State Tax Commission can exchange information secured from income tax returns filed in this State with officers of other states or the United States charged with the administration of income tax laws, providing the Statutes of the United States and other states, as the case may be, grant substantially similar privileges to the proper officers of this State charged with the administration of our Income Tax Act.

THE CORPORATION FRANCHISE TAX

The corporation franchise tax in its present form was inaugurated by action of the Legislature in the year 1931. The first returns due under the new law were required to be filed during the fore part of the calendar year 1932, and while those returns were based upon the operations of the corporations during the "taxable" year 1931 the tax paid was for the privilege of doing business or exercising the corporate franchise during the year 1932. The same principle still pertains to the law in its present form so that a return made by a corporation covering its operations during the year 1935 is the basis for computing its tax due for the privilege of doing business in the State of Utah during the year 1936. The corporation franchise tax was inaugurated for the purpose of replacing the old corporation license tax or capital stock tax, and also, together with its companion act the personal income tax law, to provide a more equitable means of placing a tax upon intangibles and assist in relieving the burden of property tax upon tangible property.

The corporation franchise tax rates have remained unchanged from the inception of the law until the present time with the exception of the elimination of the property tax offset credit which was eliminated by the 1935 Legislature, and which had the practical effect of raising the rate from 2% to 3% on the net income of the corporation and increased the tax on the "value of tangible property" base, where used, by fifty per cent. In view of the fact that the change in the law was effective upon returns filed in 1936 based upon 1935 operations, the statistics contained in this report for the fiscal years ending June 30, 1935, and June 30, 1936, afford a very good basis of comparison of the results of tax assessed before the elimination of the property tax offset credit and those after the elimination of the credit.

The following schedule lists the amount of corporation franchise tax assessed during each of the fiscal years ended June 30, 1933, 1934, 1935 and 1936:

Comparative Statement of Amount of Corporation

| Franchise Ta | ix Assessed During Fisca | al Years as Shown |
|--------------------------------|--------------------------|-------------------|
| ror rear End | ed | Amount Assessed |
| June 30, 1933 June 30, 1934 | | \$189,359.63 |
| June 30, 1934 | | |
| June 30, 1935 | | 368,625.86 |
| sune 50, 1550 | | 596,657.73 |

While the figure shown in the above schedule for the fiscal year ended June 30, 1936, shows a decided increase over the tax assessed for previous years, this increase cannot be said to represent the net effect of the elimination of the offset credit. The figure shown for the year ended June 30, 1936, may be analyzed as follows:

Analysis of Corporation Franchise Tax Assessed for Fiscal Year Ended June 30, 1936

- 1. Amount assessed from July 1, 1935, to December 31, 1935\$ 56,750.60

Total Assessed for Year Ended June 30, 1936 \$596,657.73

Item No. 1, in the above schedule represents assessments of tax made during the last six months of the year 1935, all of which would be assessed under the law effective prior to the elimination of the offset credit.

Item No. 2, represents assessments of tax made during the first six months of 1936, but which are the result of audits made of returns filed in the main by taxpayers prior to January 1, 1936, and which also would be assessed under the law effective prior to the elimination of the offset credit.

Item No. 3, represents the balance of the tax assessed during the year ended June 30, 1936, and would substantially represent the amount of tax assessed upon returns filed under the law effective after the elimination of the property tax offset. While this balance includes assessments of tax against a substantial number of corporations whose tax was based upon the minimum of \$10.00, and upon which the offset credit would have no effect, the proportional amount would be so small that we can reasonably say that one-third of \$511,649.92, or \$170,549.97 is the amount of tax resulting from the elimination of the offset credit in the corporation franchise tax law as of June 30, 1936. It is to be observed that this amount represents assessments under the new law for a period of six months only, although it is the period during which the major portion of the tax for each year is assessed.

A further comparative analysis of the franchise tax is presented in the following schedule, showing the amount of tax based upon net income and the amount of tax based upon 1/20 of one per cent of the value of property owned. The latter base also includes the tax based upon the minimum of \$10.00 where the taxpayer has no net income. The figures shown in this schedule are based upon collections of tax made during the years shown, rather than upon assessments.

Comparative Statement of Corporation Franchise Tax Collections Showing Amounts Based Upon Income And Amounts Upon Value of Property

| | | | Amount Base | d on | Amount | |
|----------|--------|---|--|------|--------------|--|
| For Year | Ende | h | Valuation | of | Based | |
| FOI FCUI | 211000 | | Property | | on Income | |
| June 30 | 1933 | | \$111,720.7 | | \$ 80,348.20 | |
| June 30 | 1934 | | 100,088.4 | 12 | 120,694.11 | |
| June 30 | 1935 | | 89,759.1 | 8 | 260,221.66 | |
| June 30, | | | |)2 | 387,066.04 | |
| ound ou, | 1000 | | and the second | | | |

After the corporation franchise tax returns have been properly recorded upon the various accounting, statistical and filing records the returns are assigned to the auditing department of the Tax Commission for the verification of the correctness of the tax liability shown thereon. Two auditors were regularly assigned to the audit of corporation franchise tax returns during the fiscal year ended June 30, 1935, and one additional auditor was assigned for the fiscal year ended June 30, 1936, but only worked a part of the year on this type of work. There are approximately 3,600 returns filed by corporations each year and these returns are first audited in the office. If any discrepancies are found they are corrected and if any of the returns seem to indicate that they warrant a field audit such procedure is followed out, as far as practicable with the auditing staff available. The time occupied in the conduct of a field audit runs from a period of one day to thirty

days, all depending upon the size of the corporation, so it is impossible for the department to audit the returns in a complete manner with the audit staff now employed and with the appropriation which has been allotted for the payment of this class of work.

We are submitting below a schedule showing the additional assessments which were a direct result of the work of the auditors assigned to auditing corporation franchise tax returns. Not all audits, however, yield additional income, some of them result in refunds to taxpayers who have made an overpayment of tax. In addition, the value of auditing work cannot solely be measured by the amount of deficiency assessments made in any one year for the reason that corrections made by our auditors in the method of reporting used by taxpayers usually results in such correction being voluntarily made by taxpayers for subsequent years. While such corrections in subsequent years are not reflected as deficiency assessments they will be represented in increased collections in tax, which are a result of the auditing of returns for previous years.

Corporation Franchise Tax Deficiencies Assessed as a Result of Audit

| Year Ended June 30, 1935 | \$ 59,197.78 |
|--------------------------|--------------|
| Year Ended June 30, 1936 | \$ 65,517.33 |
| Total | \$124,715.11 |

In addition to the amounts shown as additional assessments in the above schedule, a substantial amount representing interest and penalties as provided by the statutes was also assessed in connection with these deficiencies.

After the audits are made and assessment notices sent to the various corporations, the taxpayer is given an opportunity within sixty days from the date of the notice of appealing to the Tax Commission from this audit report. Numerous hearings have been conducted by the Tax Commission as a result of proposed assessments made by its auditing department which were a result of examinations made of taxpayers' books and records. A large number of these appeals is due to a misunderstanding between the taxpayer and the auditor as to the methods of adjustment of various items reported on the corporation franchise tax returns and many informal conferences are held between the taxpayer, the auditor making the examination and the chief auditor or other representative who has not worked directly on the case. The results of these conferences are submitted to the Commission for their approval or rejection and if the taxpayer is not in agreement with the position taken by the Commission, he is afforded the opportunity of appearing before the Commission in a formal hearing, as provided for in the statutes.

When appeals to the Commission have been decided, the results are not final and the taxpayer still has the further right of appealing to the Supreme Court of the State upon the record which has been made before the Commission.

BANK TAXATION

Corporation Franchise Tax as Applied to Banks

For some time we have been considering the inequity which exists by virtue of excluding interest from tax exempt securities from the net income base for corporation franchise tax purposes. This problem is one which involves corporations engaged in all types of business, but is especially pertinent to the taxation of financial institutions. Under the law as constructed at the present time, interest received from tax exempt securities is not required to be included in the tax base, however, expenses incurred in earning all income whether tax exempt or not are allowed as deductions. This enables a taxpayer to invest funds in tax exempt securities to the point where the income from remaining sources does not exceed the deductions allowed and thus show for tax purposes no net income, or even a loss, and yet actually the results of all operations show a very substantial profit. It is significant to observe the following from a special report of the State Tax Commission of New York, published in 1934 on State and Local Taxation of Banks in the United States:

"Among the States which have adopted the tax according to or measured by net income, we find two—Oklahoma and Utah—which have not chosen to include interest from all sources in the tax base. In fact, in the case of Utah, the tax in its present form could as well be called an income tax."

The following schedule prepared from returns filed by State and National banks for the taxable year 1935 is submitted as indicative of the actual result of excluding interest from tax exempt securities from the corporation franchise tax income base:

51

Loss Resulting From Exclusion of Interest on Tax Exempt Securities From Franchise Tax Base of State and National Banks for Taxable Year 1935

| Net Taxable Income Reported Upon Which Tax Was | State Banks | National Banks |
|--|--------------------------|-------------------|
| Amount of Taxable Income Which Would Have Been Reported if Interest From | 57,621.64 | \$210,927.49 |
| Tax Exempt Securities Were Included in the Tax Base | 55,117.87 | 650,665.12 |
| Difference\$33 | 97,496. <mark>2</mark> 3 | \$439,737.63 |
| Tax at 3% on Above Differ- ences\$ 1 | 1,924.89 | \$ 13,192.13 |

It will be observed from the above schedule that a loss of 67.58% was sustained by the State in franchise taxes paid by national banks due to excluding interest on tax exempt securities, and a loss of 60.68% was sustained in the case of state banks. Similar losses of varying degrees are also sustained in all cases where corporations are receiving income from tax exempt securities.

While some persons have expressed themselves as feeling that interest from tax exempt securities is not excluded from the tax base by the provisions of subsections 80-13-6(2) (d) of the Revised Statutes of Utah, 1933, we have found no legal decisions that would lead us to the same conclusion.

It is therefore recommended that the statutes be amended so as to include interest from all sources in the tax base for purposes of computing the corporation franchise tax.

While the inclusion of interest from all sources in the computation of the corporation franchise tax will tend to increase the amount of taxes to be paid by banks, it will not solve the problem that exists in taxation of national banks. The solution to the problem lies in the amendment of Section 5219 of the Revised Statutes of the United States. It STATE TAX COMMISSION

is our suggestion that the Legislature memorialize congress to so amend this statute as to permit of the equitable taxation of national banks.

THE SALES TAX

General

The sales tax was adopted in 1933 as an emergency revenue measure and became effective June 1, 1933, with the rate of tax at $\frac{3}{4}$ of 1%, and effective August 4, 1933, the rate was increased to 2%. The tax is payable to the State by the seller, who, under the law, is held responsible for its collection from the purchaser, but who may either collect the tax, absorb it or include it as an addition to the price.

The revenue produced has exceeded that which was estimated or expected and has shown a gradual increase since the adoption of the tax. The collections for the last three fiscal years are as follows:

| Vear | ended | June | 30, | 1934 | \$1,731,005.73 |
|------|-------|------|-----|------|--------------------|
| | ended | | | | 2,497,554.41 |
| | ended | | | | 2,966,866.29 |

The increase in collections is attributed to increased sales, increased prices and a more effective collection procedure which has been adopted in the administration of the tax.

A statistical analysis has been made of the sales tax returns filed during the fiscal year ended June 30, 1936, and the results are presented in the tables contained in the appendage. These tables show the tax reported by types of management, business groups, types of business, and distributed by counties and cities. It is interesting to note that in the business groups the item of food accounts for over 22% of the total tax reported and that the items of food, general merchandise, apparel and utility services. all representing necessities, account for 54% of the total tax. In the distribution of the tax by cities and counties, we find in our State, as in other states having sales taxes that the greater portion of the tax is paid in the cities and in the counties having a more concentrated population. This is accounted for in part by the fact that sales transactions are concentrated in the larger centers of population, the rural population coming to these centers to trade.

There are certain objections and problems that have been raised in the administration of this tax, namely: 1. The burden falls heavier on the low income groups.

2. The tax cannot be imposed on transactions involving interstate commerce.

3. The problems presented where tax amounts to less than one cent.

Concerning the first item as shown above, the major part of the tax reported is from necessities. By necessities we mean items that the person with a small income is required to purchase and items for which the major portion of his income is expended. The sales tax is a regressive tax in that as a person's income increases the portion or percentage of such income paid out for items subject to sales tax decreases. The person, then, with a small income, pays out in sales tax a larger percentage of his income than does a person with a large income. This objection, however, is overcome to a great extent when the sales tax is considered as a part of the State revenue system, together with the income tax and the property tax.

The second item, that of interstate commerce, is the more serious as it applies to revenue, administration and the effect upon the Utah merchant. States are prohibited by the Federal Constitution from regulating commerce between states, and as a result, a sales tax cannot be imposed on sales made in interstate commerce. Such sales may be classified in two groups: sales of goods coming into the state, and sales of goods going outside the State. It is this first group which results in competition with, and discrimination against, the Utah merchant and causes the greatest administrative difficulties and probably affects the revenue more than the second group. Other states having sales tax laws have enacted as a supplement to their sales tax, a law known as a "Use Tax" which has the effect of imposing a tax on goods coming into the state for use and upon which the state sales tax has not been paid. Such a law would tax not only this first group of interstate commerce transactions, but would also apply to goods which the user had gone into another state to purchase. As the sales tax in the State of Idaho is no longer in effect, we no doubt will have the situation of Utah residents living close to the Idaho State line going into Idaho where no sales tax is charged, to make purchases rather than trading with the Utah merchants. The adoption of a "Use Tax" would impose a tax on the purchase price of such goods when they were brought into this State for use or consumption. The states recently adopting such laws are California, Colorado, Ohio and Washington. If this State is to

continue the sales tax as a part of its revenue system, the adoption of a "Use Tax" statute should be seriously considered. Some question has been raised as to the constitutionality of such a law and in the state of Washington their Supreme Court has upheld the statute, but the Federal Circuit Court of Appeals held it to be unconstitutional and the case has been appealed to the United States Supreme Court.

The third objection is not so serious in its effect upon revenue, but does present some problems between the seller and purchaser in transactions where the tax amounts to less than one cent. It has been found that most merchants collect the tax from the customer, and as the merchant has no means of collecting less than one cent, bracket systems have been adopted which most nearly collect the amount of tax he is required to return to the State. Under this system a customer may be required to pay a one cent tax on a twenty cent purchase which amounts to a 5% tax instead of 2%. This same customer may, however, make several ten cent purchases upon which no tax is paid and thus, considering his aggregate purchases in comparison with the total tax he has paid, the theory would be that if enough purchases were considered, the tax paid would not exceed a 2% rate.

The complaints of the purchaser are: first, that in considering single purchases, he pays under the bracket system, a tax greater than at the 2% rate; second, that the merchant is collecting an excess tax. We have made some special studies regarding the methods used by merchants, and although these studies are rather limited in their scope, we find that the larger merchants are collecting very nearly the amount of tax that they are required to return to the State and that the smaller merchants collect less tax. This study further shows that the merchant may have an under-collection in one department of his business and an over-collection in another department. In one case we found that in the sale of meals and tobacco there was a considerable under-collection, whereas in the drug department an over-collection existed, but in considering the total sales of all departments and the total tax there did not exist any over-collection. The small merchant operating a business such as a confectionery, making sales in small amounts and making sales of articles having a fixed or determined price, claims that it is not practical for him to collect the tax and that he is forced to absorb the tax. Merchants also complain of a customer's resistance to

paying the sales tax, especially on transactions where the sale amounts to less than fifty cents.

Other states have adopted sales tax tokens, issued to overcome these objections usually in the denomination of one-fifth of one cent so that, under a tax at the 2% rate, one token would represent the tax on each ten cent purchase. The use of the token enables the purchaser to pay very nearly the correct amount of tax and assists the merchant to reimburse himself for the amount of his tax liability to the State. We are now gathering data from the states using sales tax tokens for the purpose of assisting in determining if this State should adopt the tokens in the administration of the sales tax. If we are so persuaded, it is the intention of the Commission to adopt a regulation to permit their use.

Some suggestions have been made concerning the amendment of the Sales Tax Law to provide for the exemption of sales of food and to offset this decrease in revenue by an increase in the rate of tax, and secondly to adopt different returns of tax on different commodities. From an administrative point of view, we are opposed to these changes for the reason that the efficiency of administration will be considerably decreased and additional opportunities of evasion will be made possible. It is a legislative policy wholly as to whether it is desired to exempt food stuff, and on this point we make no recommendations or suggestions other than the statement just made concerning the difficulties of administration. Regarding any increase in the rate of tax, we believe that the 2% rate is the most effective and that any higher rate would tend to increase the incentive to purchase outside the State and would result in increasing the burden on the Utah merchant, both by competition and increasing the costs of the merchant who is unable to collect or reimburse himself for the sales tax. There are, however, some changes which have presented themselves and we recommend their consideration. They are as follows:

(a) The present law imposes a 10% tax on malt and malt products. The amount of tax returned from this source for the last fiscal year was only \$1,174.30. The 10% rate should be eliminated and such products made subject to the 2% rate.

(b) Our interpretation has been that the tax does not apply to the sale of meals made by private clubs and school cafeterias where the serving of meals is restricted to the members of the club or the students of the school. There would seem to be no logical reason why sales of meals made by private clubs, serving a large membership, should be exempt, and yet sales of meals made by restaurants serving to the general public should be taxed. It is submitted that an amendment should be made applying the tax to at least the sales of meals made by private clubs.

(c) The law requires a \$2.00 license fee of each vendor for each place of business. The complaint has been made that the law makes the seller or vendor the collection agency of the State and charges him a \$2.00 fee for such privilege. The license fee does prove to be a burden in the case of some very small merchants and we believe that consideration should be given to a reduction in the amount of the fee.

Administration

From our experience of over three years in administering and collecting the sales tax, we believe certain changes are necessary to provide for a more effective administration, reduce costs and avoid loss of revenue. We, therefore, propose that the law should provide: first, uniform filing of returns; second, collection of the delinquent taxes by warrant; third, a provision for a specific penalty for delinquent filing of tax returns. Our reasons for these proposals follow:

The law now requires that returns are to be filed monthly, except in cases where the tax liability is \$10.00 or less a month, the returns may be filed quarterly. As a result, part of the returns are filed monthly and part quarterly and taxpayers are continually changing from one basis to the other, depending on the tax liability. Delinquencies could be more readily determined and less confusion would exist with the taxpayer if a uniform filing were adopted and we recommend that returns be filed every two months. The bi-monthly plan, as compared to monthly filing, is less costly and coordinates with our delinquent routine and overcomes the objection to quarterly filing of allowing a larger amount of tax to accumulate in the hands of the taxpayer.

The second proposal, the collection of delinquent tax by warrant to be issued by this Commission, is most important. Our interpretation of the Act has been that the determination of the tax liability is vested in this Commission

with the right of review or appeal to the State Supreme Court. In order to collect a tax that has been determined as due and the payment of which is delinquent, we find it necessary to file an action in the proper city or district court for the purpose of reducing the tax liability to a judgment. As these courts do not inquire as to the determination of the tax liability, it would seem that the collection might just as well be made direct by a warrant from this Commission. The present procedure increases the cost of collection and is cumbersome and slow, thus resulting in a loss of revenue. We find that the possibilities of collection are much greater the sooner we reach the delinquent taxpayer and can force payment of the tax. If the taxpayer has admitted the liability by filing a return, and has, as in most cases, collected the tax from his customers, we believe the most adequate means should be provided for the State to collect the tax from the taxpayer vendor. A warrant provision, as provided in our Income and Corporation Franchise Tax Acts, and as many other states have in their sales tax laws, is strongly recommended.

Lastly, we propose that the Statute should be amended to provide for the imposition of a specific penalty for the failure to file tax returns when they are due. We intend to prepare such a bill for the Legislature.

During the biennium we found it necessary to change our procedure in determining delinquencies and in accounting for each taxpayer. A number was given to each taxpayer, according to districts and the accounts, and delinquent records were filed and maintained by these numbers. return blank is mailed to the taxpayer prior to the time the return is due. If the return is not filed the taxpayer is given notice of the delinquency and if he fails to file within thirty days, the tax liability is estimated by our Auditing Department. The accounts for the entire State are didived into four groups with a man assigned to each group who supervises and handles the delinquent routine for the accounts in his group. Periodically, men are sent into the field to contact delinquent taxpayers, adjust certain accounts and locate new taxpayers. These men are furnished with a photostatic copy of the taxpayer's account and delinquent record so that they have a rather complete history of the case.

When the collection department finds it is unable to make collection of the delinquent tax, the case is referred to our Legal Department. This department notifies the taxpayer that a court action will be filed unless the tax is

STATE TAX COMMISSION

paid, and then proceeds to file such an action if the taxpayer still refuses payment. It is estimated that about one-third of the cases are closed as a result of this notice, and thus do not require an action to be filed. During the biennium our Legal Department filed 345 actions to collect tax, interest and penalties amounting to \$67,894.54. Of this amount \$35,202.52 was collected, the balance is either pending collection, abated on account of error in assessment, or uncollectible.

We believe that the change to the procedure as outlined above had a material effect in the increased revenue collected and we know that we have been able to decrease the number of delinquent accounts from over 20% to 13%.

We cannot give an estimate of the evasion or loss in revenue that exists under the Sales Tax, yet we know of its existence to some extent. The following information is interesting.

Fiscal Year Ended

| | June 30, | June 30, |
|---------------------------------|-------------|-------------|
| | 1935 | 1936 |
| Number of Licenses issued | 10,022 | 11,747 |
| Number of Returns Filed | | 52,604 |
| Amount of Deficiencies Assessed | \$13,295.06 | \$45,060.84 |
| Amount of Penalties and | | |
| Interest Assessed | 21,439.69 | 16,092.93 |

The deficiencies assessed were a result almost entirely of field audits and investigations, showing an additional tax to be due over that reported by the taxpayer. The causes resulting in the deficiency in taxes reported are largely matters of interpreting the correct application of the law, failure to keep adequate records and in some cases, carelessness or an attempt to evade tax. We find that the only practical way to determine if the correct tax has been reported is by an actual field investigation of the taxpayer's books and records. This is a rather slow procedure and somewhat expensive and due to our limited appropriation we have been able to satisfactorily audit only a small percentage of the reporting taxpayers. We believe it necessary that our auditing force be increased in order to audit more accounts and prevent evasion and carelessness on the part of the taxpayer.

MOTOR FUEL TAX

The tax on motor fuels which became effective in 1923, has been the principal source of revenue for the building and maintenance of Utah highways. The revenue is increasing each year with the increased consumption of gasoline. Commencing at the rate of $2\frac{1}{2}$ cents per gallon the rate was increased to $3\frac{1}{2}$ cents during 1925 and to 4 cents during 1931, where it now stands. The present rate of taxation placed Utah in the middle bracket when compared with the levies of other states. At the present time there are eighteen states with a higher motor fuel tax than ours and seventeen, including the District of Columbia, with a lower rate. A tabulation of rates, as of June 1, 1936, by the numbers of states is shown below:

| No. | of States 8 10 17 11 3 | $\begin{array}{ccc} \text{Rate Per Gallon} \\ 6 \text{ to 7 cents} \\ 5 & \text{cents} \\ 4 & \text{cents} \\ 3 & \text{cents} \\ 2 & \text{cents} \end{array}$ |
|-------|---------------------------------------|---|
| Total | 49 | 4.23 Average rate |

These figures are exclusive of federal, county and inunicipal gasoline taxes.

Utah's net collection of motor fuels taxes exclusive of license fees for the fiscal years ending June 30, covering the period 1923 to 1935, is shown in the following table:

Total Net Collections of Motor Fuel Taxes By Fiscal Years'

| Year 1923x 1924 1925 1926 1927 1928 1929 xMarch | Amount \$ 85,059.93 652,766.66 771,180.88 1,219,778.80 1,319,393.09 1,577,169.01 1,737,850.26 to June 30th. | Year 1930 1931 1932 1933 1934 1935 1936 | $\begin{array}{c} Amount \\ \$2,095,721.82 \\ 2,111,430.22 \\ 2,307,986.77 \\ 2,110,680.59 \\ 2,327,759.38 \\ 2,534,964.50 \\ 2,898,425.77 \end{array}$ |
|---|---|--|---|
|---|---|--|---|

The decrease in revenues in the year 1933 is comparable with the decrease in the total registration of motor vehicles for that period.

Under a recent Federal Law, soldiers and federal employees who have been buying gasoline on government property for personal use without paying the state tax, are now required to pay the tax the same as civilians. The only motor fuel exempted is that "for the exclusive use of the United States." This State has been frequently congratulated on its motor fuels statutes, which permit economical collection of the tax, with minimum opportunities for evasion. This result is obtained by collecting the tax at the source of production or importation into the State.

The panorama of motor fuels is continually changing as the petroleum industry steps forward to keep pace with the evolutions of the motor industry. New fuels are being produced, both for the benefit of high powered, high compression motors and for the benefit of motors utilizing low grade, untaxed fuels. This condition creates a problem of classifying motor fuels as defined in the law, to prevent evasion of tax and at the same time to permit consumers to use fuels below the standard of gasoline for domestic and commercial purposes in no way connected with the highways, without the payment of the motor fuels tax. A study of the problem indicates that under the circumstances, it is a difficult matter to clearly define by statutes all motor fuels. We have been confronted with the problem of high grade distillate or fuel oils imported into the State, which could be used in blending with higher grade taxed fuels and sold as gasoline. The problem is not considered serious but is being watched through field audits of importers' records and by cooperation with the State Gasoline Inspector.

During the past few months field audits of the accounts and records of a number of motor fuels distributors and dealers have been made to determine that all taxes are being paid. Our experience indicates that the industry generally is endeavoring to fully comply with the laws although some exceptions were discovered and corrective measures have been taken. Incorrect and improper methods of reporting, such as temperature adjustments on invoices, are being changed thereby placing all dealers on a uniform basis. It is the intention to continue these field audits because in addition to the other benefits derived, the Commission is enabled, through the audit reports, to keep in touch with changing conditions in the petroleum industry and to secure information not available through other sources.

Some dealers doing business in the State, but maintaining headquarters in other states, do not keep records within the State, of all business transacted therein. In order to place all motor fuels distributors and dealers on a basis where their books and records are available for examination without undue expense to the State, it is recommended that the statutes be amended so that all such distributors and dealers doing business within the State be required to keep within the State, books and records of business transacted therein, or be required to pay the expenses of auditing such records outside of the State.

Section 57-12-7 of the Motor Fuels Tax Law allows a deduction, before payment of the tax, of 3 per cent of the gross amount of motor fuels produced or shipped into the State, to allow for evaporation, loss in handling and expense of collection. While recognizing the perishable nature of gasoline, the Commission is of the opinion that 3 per cent is an extremely liberal allowance, which could safely be reduced without injustice or hardship upon the dealers. An investigation indicates that Utah ranks with those few states making large allowances. A table of allowances by groups is shown below:

Allowances to Distributors for Shrinkage, Evaporation, Spillage, Etc.

| Number of States | Percentage of Allowance |
|-------------------------------|--|
| $2 \\ 9 \\ 1 \\ 8 \\ 1 \\ 14$ | $ \begin{array}{c} 4\\ 3\\ 2^{1}/_{2}\\ 2\\ 1^{1}/_{2}\\ 1 \end{array} $ |
| 1 11 1 1 | 1/2 None Actual Loss Not Specified |
| Total 49 Average | |

The reduction of 3 per cent represents a deduction of over \$80,000 in the 1935 motor fuels tax collections. Reduced to the average of other states, the tax collections would increase over \$40,000 per annum.

CIGARETTE AND OLEOMARGARINE TAX

The provision of the present tax law which places the responsibility upon the original consignee or vendor within the State, of affixing the tax stamps, has materially aided in the collection of the tax; in addition, by reducing the number of dealers to be supervised, this law has cut the cost of supervision and reduced petty violations. Under the existing statutes, a limited control may be exercised through the examination of the records of purchases and sales of the wholesale concerns. However, there is some evasion by small retail dealers which we are attempting to curb by the work of our field inspectors and auditors.

Section 93-1-5 of the law which confers authority on the Tax Commission to impose penalties for violation of the law, has been held unconstitutional by the Supreme Court. This feature of the law has been an excellent aid to the Commission in discouraging violators, being far more effective than resorting to local courts for convictions. For this reason the Commission recommends that the law be amended to permit the imposition of a fixed sum to be imposed as a penalty for violations, which will not be in conflict with the Supreme Court's decision.

The revenue from cigarettes and cigarette papers continues to increase. Tax and license collections for the fiscal year ended June 30, 1936, totaled \$284,493.48 as compared with \$243,165.44 for the year 1935 and \$202,-558.86 for the year ended June 30, 1934.

As stated in the Second Biennial Report, the Commission feels that the annual license fee of \$10.00 for selling cigarettes is too high. When it is considered that hundreds of small retailers carry cigarettes only as an accommodation to their patrons, with little or no profit involved, the reason is obvious. In such instances there is an incentive to violate the law by bootlegging. A reduction of the license fee to \$2.00 per annum would reduce revenues approximately \$17,000 per year, based on license fees collected during the fiscal year ended June 30, 1936, which totaled \$21,141.00. This reduction would doubtless be partially offset by an increase in the sale of stamps and may be almost entirely offset by reducing the discount from 10 per cent to 5 per cent on stamps sold. This discount totalled \$29,527.37 for the last fiscal year. Consideration of this matter is urged in view of the fact that we are surrounded by states which have no state cigarette tax.

The Commission feels that the requirement of a bond for retailers is no longer necessary and recommends that Section 93-1-3 be amended to cover only those persons in the State receiving unstamped cigarettes. Such action would relieve numerous small taxpayers of an undue burden which yields no revenue and is of insignificant benefit to the State.

In line with other revenues the oleomargarine tax collections have increased during the past two fiscal years as follows:

| Sale of Stamps 1934-19 License Fees \$ 24,658 1,040 \$ 1,040 | 8.50 \$ 36,219.15 |
|--|-------------------|
|--|-------------------|

It is the belief of the Commission that the license fees for oleomargarine should be reduced correspondingly with the license fees for cigarettes. A reduction to \$2.00 per annum would reduce revenues approximately \$850 per year. It is also believed, that the bonds for retailers should be eliminated and that bonds should be required only from persons who manufacture or receive for sale unstamped oleomargarine.

INSURANCE TAX

The amendment of the insurance premium tax statutes, effective May 14, 1935, increasing the tax rate from $1\frac{1}{2}$ to $2\frac{1}{4}$ per cent had the effect of materially increasing the revenue from this source. This is shown by the following table which gives the insurance premium tax collection for the three fiscal years ended June 30, 1934; 1935; 1936:

| Insurance Company 1934 | 1935 | 1936 |
|---|--------------|--------------|
| Tax\$158,060.75 Insurance Tax— | \$169,176.32 | \$271,064.91 |
| Self Insurers 10,803.22 Insurance Company Tax—Fireman's | 11,503.81 | 17,269.23 |
| Fund 6,848.08 | 9,541.21 | 9,756.80 |
| Total\$175,712.05 | \$190,221.34 | \$298,090.94 |

Although Chapter 40, Laws of Utah, 1935, amending Section 43-3-7, Revised Statutes of Utah, 1933, increased the rate of tax on premiums to $2\frac{1}{4}$ per centum, the premiums on reciprocal insurance are still taxed at the old rate of $1\frac{1}{2}$ per centum. This is because the chapter on insurance contains a clause which provides that the general insurance statutes shall not apply to reciprocal insurance unless specifically mentioned. While the increase in revenue produced thereby would be negligible, it is recommended that the law be amended equalizing the tax on reSTATE TAX COMMISSION

ciprocal insurance companies with that of other insurance companies.

Utah is one of the few exceptions among the states which allow deductions from the insurance premium tax for certain amounts paid on property tax. It is recommended that the law be amended to eliminate this provision in Section 43-3-7. If the provision is not eliminated, then Section 42-1-51 of the Revised Statutes of Utah, 1933, which imposes a tax upon self-insurers, should be clarified to the extent of providing that self-insurers shall not be entitled to an offset for taxes paid for general state purposes.

Cases arise where insurance companies become defunct, and if they are owing taxes the receivership will not recognize the taxes owing in other states. (This was true in the case of the National Life Insurance Company of America.)

It would seem desirable that the laws should be amended in some form, requiring insurance companies that enter into this State to do business to then agree to post a bond guaranteeing the payment of the premium tax which shall thereafter become due.

Frequently, insurance companies entering the State write a large volume of business and then withdraw from the State. They are no longer subject to our jurisdiction, and though they continue to receive premiums from residents of this State, who mail the premiums to them at their office outside the State, those premiums are not subject to our tax. It would seem that the laws should be so amended that any insurance company entering the State and doing business here would be required to agree that it would pay the insurance premium tax on all premiums sent from this State, even after it has withdrawn from the State. Considerable doubt exists as to whether such a requirement could be imposed and yet not contravene the provisions of the United States Constitution.

As an alternative, it has been suggested that our method of reaching premiums paid by citizens of this state to foreign insurance companies, should be by working out some reciprocal agreement which would provide that the state of the domicile of the company would refund to the particular state from whose citizens the premiums were collected the amount of the tax applicable to that state, provided, that state would reciprocate in like manner. The difficulty is that the states of the domicile of the company may not be willing to do so, particularly if they have many such companies.

The Commission is of the opinion that some of the fraternal insurance organizations, which under the law are permitted to operate tax free, have not limited their scope of operations as intended by the statutes and that they are, therefore, subject to taxation the same as the regular insurance companies. This question, through the Insurance Commissioner, has been submitted to the Attorney General for a legal opinion. Our attention has been directed to a decision handed down in the early part of November by a three-judge federal court, holding that fraternal societies are exempt from the payment of insurance premium tax. In its decision the court said, "that many of the reasons which originally justified exempting fraternals from taxation no longer apply to such great financial institutions as the plaintiff has grown to be. But such considerations are for the Legislature. It has sanctioned the changes in the methods of the fraternals which have made their growth possible, but has kept intact and without change their classification as exempt corporations."

We, therefore, submit this matter for legislative consideration.

MOTOR VEHICLE REGISTRATION

Many changes in the Motor Vehicle Laws were made by the last Legislature. During the time within which they have been operative, we have had an opportunity to judge of their merit and effectiveness. Some have met with the approval of the public and have also worked advantageously in facilitating prompt handling of registration matters. We shall here discuss only a few of the more important changes that have been made.

When an application for registration is made the law now requires the surrender of the certificate of registration last issued. This eliminates endless checking of documents, as a complete description of the vehicle is obtained from the surrendered certificate, showing that the vehicle has been previously registered. Likewise the adoption of the flat fee basis of \$5.00 for passenger cars has facilitated the work, because it is no longer necessary to check the model and year of manufacture to determine the amount of the fee.

Revenue from both motor vehicle registration and gross ton mile taxes have decreased in 1936 from the figures in 1935 because the legislature has decreased the rates of both.

STATE TAX COMMISSION

Expiration of Registration

Under the provisions of the existing motor vehicle laws, registration of motor vehicles expires at midnight on the 31st day of December of each year, and the owner of a vehicle registered thereunder who has duly and regularly applied for the annual renewal of registration within fifteen days thereafter shall be entitled to operate such vehicle until midnight of January 31st on the plates issued for the previous year.

The department is authorized to receive applications for renewal of registration and issue new registration cards and plates at any time prior to expiration of registration, but no person shall display the new registration plates prior to December 15th.

Inasmuch as many county assessors are unable before January 2nd of each year to issue tax clearances, a necessary requisite before registration can be completed, it is impossible for this department to complete such registration before that time, thus rendering inoperative the expiration of motor vehicle registration provisions set out heretofore until a change is made in the expiration date of plates. The expiration should be extended to January 31st of the year following that for which such registration was issued, and no one should be permitted to display the new registration plates prior to January 2nd. The alternative is a change in the property valuation assessment date.

All motor vehicle registration plates used in Utah in 1937 were made in the Utah State Penitentiary and are of the same standard and specification as heretofore issued by the department.

Licensing Dealers, Transporters and Wreckers

The department must, by law, license manufacturers and transporters of automobiles, dealers in used parts and accessories, dealers in motor vehicle tires and wreckers of vehicles for the resale of the parts, as well as dealers in motor vehicles, as heretofore. Under the Act, a licensed wrecker must furnish the department with a report of acquisition or purchase, accompanied by the last issued title certificate properly endorsed and notarized, before he is given a permit to dismantle the vehicle, thus protecting the public, as well as the legitimate licensed wrecker.

Not only is this an additional anti-theft measure but it makes possible the clearing from our current files of hundreds of obsolete title records. It is important to close out these certificates because our files for keeping the documents are voluminous. The reason is that the Statutes require the department to maintain an appropriate file for every surrendered certificate of title and every application for title for a period of not less than seven years, so as to permit the tracing of titles to vehicles. It will be appreciated that the filing of documents is a constantly growing problem.

As a result of our anti-theft provisions and the cooperation of peace officers of the State, Utah holds an enviable record throughout the country in stolen car recoveries. Reports of stolen or embezzled vehicles are recorded and listed in the files of the department, and all peace officers of the State are notified thereof, as well as every motor vehicle department in the United States.

Revoking Operators' and Chauffeurs' Licenses

Suspending and revoking operators' and chauffeurs' licenses for cause, has made some demand upon the time of the department in the past year. The law requires each judge and justice of peace to report to the department each record of conviction so that the Commission may make such suspension or revocation as the law requires. It has been necessary to keep in touch with the judicial officers to urge them to send in their reports for action by the Commission. We regret to report that while some judicial officers make regular reports, many of them do not. During 1936 there were suspended and revoked some two hundred fifty licenses, approximately half of which were on charges of reckless driving.

Renewal of Operators' Licenses

The Uniform Motor Vehicle Operators' License Act adopted by our Twentieth Legislature and in effect January 1, 1934, makes the licensing of all motor vehicle operators compulsory before such individuals may operate vehicles on the highways of the State. Realizing that it would be almost impossible to examine all individuals who would apply for licenses, the department decided to issue licenses upon application and without examination for the first three months the law was in effect. During this period of three months, approximately 138,000 licenses were issued. Since April 1, 1934, all applicants for licenses have been required to take an examination.

STATE TAX COMMISSION

Licenses are good for three years, or until revoked. Section 16-A, Chapter 47, Laws of Utah, 1935, states: "The department is authorized at any time to cancel all operators' licenses heretofore issued, which have been outstanding for three years or more, and to require the renewal thereof, and every operator's license thereafter issued expires three years from date of issuance."

We are now approaching the period when some 150,000 operators' licenses have been outstanding for a period of three years or more and we shall shortly be confronted with the question as to whether or not we should exercise the discretion granted to us by statute to require the cancellation of all licenses which have been outstanding for three years. The only purpose of cancellation would be to require those licensees to be examined. The task of examining 150,000 applicants for renewal of licenses would be a large one. Applicants would be subjected to some inconvenience in being required to take an examination.

The fee charged for an operator's license is twentyfive cents. Actual cost to the State is something more than twice that amount. Therefore, the examination of 150,000 applicants would cost the State approximately \$40,500, in excess of the amount paid by the applicants.

For these reasons, we hesitate to direct the cancellation of outstanding licenses. The Commission would much prefer that it be not left to our discretion as to the term for which the licenses should be effective. We are of the opinion that the licenses should be effective for a definite term of years. Such a provision would free the Commission of the charge that it was exercising too much authority in requiring the cancellation of licenses which have been outstanding for three years or more.

If the Legislature should require the re-examination of applicants at the end of a definite term, then in order to meet the costs, it should either require an increased fee, or make an appropriation to the department to cover the cost of making these examinations.

Registration and Taxation of House Trailers

The statute exempts from registration small twowheeled trailers of less than one thousand pounds gross weight. Most house trailers of the variety now in common use are less than that weight, and accordingly are not required to be registered and, therefore, not required to ob-
tain a tax clearance. Owners of house trailers, therefore, do not pay a registration fee, and unless a county assessor happens to know of the trailer house, it is not assessed for tax purposes.

GROSS TON MILE TAX

The Twenty-first Legislature changed the basis of registration of motor vehicles from the basis of the manufacturers' rated carrying capacity to the basis of gross weight. The gross weight of a vehicle includes both the weight of the vehicle and the load. The minimum gross weight for which each unit may be registered must be at least as much as the manufacturers' rated carrying capacity, plus the weight of the vehicle.

Section 36-1-29, Chapter 48, Laws of Utah, 1935, provides, "A trucktractor and semitrailer shall be construed to be two vehicles for all purposes." As a result of the wording of the section most two vehicle units, that is, trucktractor and semitrailers, have been registered this year, thus creating a greater road hazard and an avoidance of the ton mile tax. For example, a truck weighing 5,000 pounds, having a manufacturers' rated carrying capacity of two or three tons may be licensed for 13,000 pounds gross weight, thus allowing the hauling of a pay load of four tons, the full year registration fee for which is \$35.00. The same vehicle may draw a trailer or semitrailer of the same weight and carry another pay load of four tons, and the drawn or propelled vehicle may be registered for another annual fee of \$35.00 allowing a total gross weight of 26,000 pounds for both vehicles for a total registration fee of \$70.00. Another vehicle weighing 10,000 pounds with a manufacturer's rated carrying capacity of 16,000 pounds, or eight tons, would require a registration fee of \$125.00 per year and be subject to the ton mile tax in addition for the privilege of hauling the same pay load, and more than likely the latter case may involve a greater capital investment and consume more motor fuel.

In addition to the registration fees set forth above, the Act requires a payment of 0.70 mills per licensed gross ton mile on all vehicles of a gross weight of over 13,000 pounds, but not more than 20,000 pounds, and 0.75 mills per licensed gross ton mile on all vehicles of a gross weight of over 20,000 pounds. A prepayment of the ton mile tax on a basis of 4,000 operating miles is required at the time of registration. If such payment is not entirely used by one vehicle, it may be transferred to another vehicle owned STATE TAX COMMISSION

by the same person, or a claim for refund may be made for any unused part of the fee. For each vehicle propelled by motor, engine or other device using fuel, other than motor fuels as defined by the Act, a mileage tax of $1\frac{1}{2}$ cents per operating mile is required in addition to the regular registration fee and the ton mile tax.

The Act requires the owner or operator of every vehicle, trailer or semitrailer required to pay the gross ton mile tax, to keep a record on forms prescribed by the department, of the operation of such vehicles and in addition thereto shall have and maintain in working order a properly calibrated and sealed speedometer or other measuring device, as the Commission shall prescribe. In the interest of economy and in order to save operators of vehicles all possible expense, the Commission required the calibrating and sealing of speedometers or other measuring instruments, which are installed on most commercial vehicles, instead of requiring additional or more costly equipment. Speedometers or other measuring devices are not standard equipment on trailers or semitrailers, consequently the owners of such units are required to install some device for measuring the distance such vehicle travels regardless of the fact that such a unit must be propelled by a vehicle that is equipped with a measuring device. To accomplish this end various agencies were established in key towns of the state to carry out this requirement, the fee for such service being paid by the owner of the vehicle.

The Act requires that on or before the 15th day of each month the owner or operator of vehicles subject to the tax shall file a return with the department, accompanied by the tax due for the operation of such vehicle during the preceding month, further requiring that such return must state specifically the speedometer readings at the beginning and end of the month with the total mileage the vehicle was operated. An administrative problem was encountered here, particularly in the cases of vehicles in interstate traffic, due to the fact that very often such vehicles will enter and pass through Utah occasionally and operate solely within another state for a considerable period of time, consequently, it has been found necessary to check the manifests or weigh-bills of these particular vehicles covering the particular trips to determine the actual mileage due.

Calibrating and sealing speedometers or other measuring devices or requiring the installation of any measuring device on vehicles in interstate traffic, is a needless measure under the present setup, as well as being a source of annoyance and an unnecessary expense to owners of commercial vehicles. A notarized or sworn statement, which is accepted in practically all other forms of returns, should suffice in determining the fees due.

The Act makes it impossible for this State to enter into reciprocal agreements with other states, as affecting privately owned trucks, thus hindering the free flow of commerce and traffic with our neighboring states.

There are defects in the collection procedure of the tax. In other taxing statutes, it is generally provided that in the event of a failure to make a return, the Commission may make an assessment of the tax from the best information it has available. If the assessment is not paid, then warrants are issued for the collection of the tax. If the statute remains in effect, it should be amended to provide the same remedy in the case of this tax.

An analysis of the gross weight registrations and the ton mile tax collections discloses that less than 5% of the trucks and trailers registered are paying a gross ton mile tax. This results from the fact that more two vehicle units having a gross weight of less than 26,000 pounds have been registered. It would seem proper to either require more of the vehicles to pay the ton mile tax or else repeal it. Since it is our opinion that it has failed as a revenue producer, we recommend that the gross ton mile tax be repealed and that the registration fee based on gross weight be increased in order to offset the loss. This loss of revenue could be offset by a 30% increase in registration fees for all trucks, and for all vehicles carrying passengers for hire.

INHERITANCE TAX

The Inheritance Tax collected in the last biennium has increased over that collected for the previous two years.

This increase in taxes for the year 1935 can be attributed mainly to a strengthening in prices of stocks and bonds and other assets owned by the decedents. The increase for the year 1936 can be attributed to this same cause and also to the fact that on estates of decedents who died after July 1, 1935, the rate of tax was increased on the larger estates. It may be anticipated that revenues derived from inheritance taxes will increase because of the higher rate of taxes imposed by the 1935 Legislature.

We wish to reiterate the recommendation made in the biennial report of the State Tax Commission for the years 1933 and 1934, wherein we proposed to change the method of making appraisements of estates. (Pages 41-42.) Our primary purpose in asking that the appraisement of estates be made by the Tax Commission is that we believe under the present system the appraisements are not uniform throughout the State. The present method of appraisement also accounts for the fact that the cost of administration of the Interitance Tax law is too high. As an exemple, in one of the counties of the State, each of three inheritance tax appraisers was paid the sum of \$225.00 for duties rendered in one month. While this is higher than the average, it is illustrative of the point that the cost of administering this tax is too high. The average monthly sum paid to inheritance tax appraisers throughout the State is \$470.50. The system which we recommended in our second biennial report corresponds to the method used by the Federal Government.

We again make the observation that the law relative to the taxation of transfers of property owned by joint tenants with right of survivorship is in our opinion, inequitable and unjust. We believe that the proper method of taxing such transfers is to tax only that portion contributed by the decedent.

It is our opinion that the exclusion of life insurance in any amount from the gross estate casts an inequitable burden upon persons owning assets other than life insurance. It is our opinion that a definite exemption should be given to life insurance and that all over that exemption should be included in the gross estate of the decedent, and should be subject to tax the same as other transfers of property.

BEER TAX

With the enactment of the Liquor Control Act effective March 25. 1935, and the resulting establishment of the Liquor Control Commission, the licensing of manufacturers, distributors and retailers of beer passed to the Liquor Control Commission. Since then the Tax Commission has been primarily concerned with the collection of the excise tax on beer through the medium of tax stamps of designated values, which must be affixed to all containers of beer.

Promptly after the publication of the Act and the printing of stamps, the Tax Commission conducted an investigation to determine that all beer containers were properly stamped and endeavored to instruct the beer dealers concerning the requirements of the Act. The manufacturers and vendors now appear to be thoroughly familiar therewith, and are generally complying with the law.

During the fiscal year ending June 30, 1935, the beer tax collections approximated \$143,000 (exclusive of license fees) as compared with approximately \$104,000 for the fiscal year ending June 30, 1936. Though the tax collections are reduced, these figures are indicative of increased consumption when consideration is given to the fact that effective with the new Act the tax was reduced.

The brewery industry is adopting the use of new style containers, in metal and in different shapes and sizes of bottles, making it difficult to securely affix stamps and neck labels as designated in Section 104. It is recommended that Section 104 be amended to permit the use of such tax stamps, either neck labels or body labels, as are adaptable to the type of container used. Because of the difficulty experienced by the brewers in getting stamps to adhere to metal containers, it is recommended that the law be amended to permit the imprinting of the tax on can lids and crowns under the direction of the State Auditor, upon approval and recommendation of the Tax Commission.

PUBLIC UTILITY REGULATION FEE

The Commission is required, under an act passed by the 1935 Legislature, to collect a special fee from public utility corporations. The amount of this fee is to be equal to three-fourths of the amount appropriated for the support and maintenance of the Public Service Commission, which fee for the present biennium amounted to \$75,000 or \$37,500 per year.

Assessment of the fee is based on the gross income derived by the public utility corporations from intrastate business, a levy being fixed to produce the required revenue. The levy applied to such gross income for the year 1934 was \$.00195 and for 1935 \$.00182. A question was presented as to the interpretation of gross income and this Commission, by regulation, provided that the gross income upon which the fee is to be based included only that derived from public utility operations, and non-utility operations were not to be considered. This ruling, we believe, resulted in a fair and equitable distribution of the burden of the fee. No serious collection difficulties have been experienced.

The following table shows the fees assessed as based on the gross income for the calendar years 1934 and 1935:

STATE TAX COMMISSION

| Corporations | 1934 | 1935 |
|--|--------------------------------|---|
| Railroad, Terminal, Express and Telegraph | $12,030.34\\24,649.96\\849.09$ | $ \begin{array}{c} 12,173.00 \\ 24,574.07 \\ 977.96 $ |
| TOTALS\$ | 37,529.39 | \$ 37,725.03 |

UNEMPLOYMENT COMPENSATION LAW

The Legislature of the State of Utah met in Special Session on August 24, 1936, to consider legislation relative to Unemployment Compensation. A bill was submitted and passed on August 28, 1936, by unanimous vote of both Houses and was signed by the Governor the following day. This Act is now known as the Unemployment Compensation Law.

The Law in brief provides for a tax upon employers of 9/10 of 1% of the total pay roll for the year 1936, 1.8% for 1937, 2.7% for 1938 and subsequent years. The tax so collected is placed in an unemployment trust fund to be used, starting January 1, 1938, for the payment of benefits to unemployed in the State of Utah.

The State Tax Commission is charged with the responsibility of the collection of this tax, the first report of which is due January 15, 1937. Preparations are now being made by the State Tax Commission for the handling of this new tax.

ACTIVITIES OF THE LEGAL DEPARTMENT

The activities of the Legal Department of the State Tax Commission in the matter of court litigation have been as varied and as numerous as the taxes which the Commission administers. These activities can be broadly classified into four divisions:

1. The collection of sales taxes on accounts turned over to the Legal Department by the Collection Department, which the latter is unable to satisfactorily settle, and the collection of which, if necessary, results in the filing of actions in the city courts and district courts of this State;

2. Cases filed specifically against the State Tax Commission in the district courts of this State, some of which have been appealed to the State Supreme Court;

3. Cases filed in the Supreme Court on Writs of Certiorari or Review, directly from a ruling of the State Tax Commission, without any intermediate action being taken in the district courts; and

4. Cases involving inheritance taxes due from decedents' estates, which controversies have arisen out of the probate of the estates in the district courts, and then appealed to the Supreme Court.

Three hundred forty-five actions for the collection of sales taxes were filed by the Legal Department during this biennium, totalling \$67,894.59. A total of \$35,202.52 has been collected, the balance representing actions still pending, either partially satisfied or in the process of settlement.

These figures do not reveal the complete story of the activity of the Legal Department in this connection, since they do not cover the numerous accounts settled by the Legal Department where suit was unnecessary, nor do they take into consideration estate matters, such as assignments for the benefit of creditors, receiverships, bankruptcies, decendents' estates, and others in which the Legal Department has filed proofs of debt. In the majority of these estate cases, payment has been received in full.

In the second class may be mentioned the three actions commenced against the State Tax Commission by the Utah Coal and Produce Truckers Association, each attacking the constitutionality of the provisions of Chapter 46, Laws of Utah, 1935, otherwise known as the Motor Vehicle Act. In two of these actions the complaints were dismissed and in the third action the case is now pending on demurrer.

There have been three actions filed by the receiver of the Starlene Gas & Oil Company against the State Tax Commission, all involving the question whether the receiver appointed by the District Court must pay a gasoline tax to the State. A demurrer to the first of these actions has been sustained, and the case is on appeal to the Supreme Court.

There has been a series of cases appealed to the Supreme Court from the decisions of the Tax Commission. We shall here merely enumerate the cases without discussing the points at issue in each. They are the following cases: Becker Products Company, a corporation, vs. State Tax Commission; Clarence A. Tite, doing business as Wilson Brothers Grocery Company, vs. State Tax Commission; Western Leather & Findings Company vs. State Tax STATE TAX COMMISSION

Commission, and W. F. Jensen Candy Company vs. State Tax Commission.

Two cases which have arisen under the Inheritance Tax Law have been appealed from the decision of the District Court to the Supreme Court.

In addition to these litigated matters, the Legal Department assists in carrying out the many details of administration by a study of the law on the many legal points that are raised from day to day. They are available for consultation, and because they can give preferred attention to the matter which we submit to them, their advice can be promptly given, so far as to assist in the speedy handling of the business of the department.

TAXATION OF FEDERAL INSTRUMENTALITIES

The new federal agencies established by the recent session of Congress bring up old problems of power and policy in matters of state taxation.

The Income Tax Law (Section 80-14-4, Subdivision G) recites that the following item shall not be included in gross income and shall be exempt from taxation under this chapter, "amounts received as compensation, salaries or wages from the United States or any possession thereof for services rendered in the exercise of an essential governmental function." It becomes a difficult problem to determine whether or not persons in the employ of these agencies are engaged in the exercise of an essential governmental function. There are but few legal decisions on the subject, and it appears that it would be advisable to have a legislative expression of State policy.

The Federal Government has sought to meet the problem in the case of property taxes. It now pays a sum in lieu of taxes upon that property which it acquired through the Resettlement Administration and similar agencies.

STATISTICS

With the increase of duties imposed upon the Commission by the Legislature of 1931, the subsequent expansion and new tax laws created afterward, the volume of transactions has become large indeed. In a corresponding manner the demand for comprehensive statistics and information on the operation of all tax laws of the State has continually increased.

In the statements that follow we have endeavored to compile as many and as detailed tables as our budget would allow. In the various tables on property tax we have been aided materially by the several county tax officials in the preparation of the reports required to be submitted to the Commission. At this time we wish to state that although we have had excellent cooperation from most county officials there are usually one or two who forward their reports as long as six months after the date required by law. For this reason it is obvious that property tax information for the entire State is held up after the time the public and Legislature are entitled to receive it, (we have been forced to make two statements in this report based on estimated information).

Some of the statements have been prepared from the records of our accounting department.

For a complete analysis of the operation of the sales tax, individual income tax and corporation franchise tax, in which the volume of returns received was in excess of 125,000 and as each return needed to be handled approximately 20 times to gather the information thereon, or a total of approximately 2,500,000 operations, we found it necessary to install the tabulating machines of the International Business Machine Corporation for a period of 13 months, to gather the information shown on the operation of the tax acts mentioned above. Whether we shall be able to continue this service will naturally depend largely upon the appropriation for the statistical department.

ADMINISTRATIVE COSTS

During the fiscal year 1935, the cost of administration of the Tax Commission was \$243,942.13. During that period a total of \$7,709,727.61 was collected—at a cost of 3 16/100 cents per dollar. During the fiscal year 1936, a total of \$9,202,373.67 was brought in with administrative costs of \$365,787.96—a cost of 3 97/100 cents per dollar.

It must not be forgotten, also, that included in these administrative costs is the cost of administering the property tax, the revenue of which is paid to the several county treasuries and not paid to the office of the Tax Commission. The costs incurred by the Tax Commission in administering this tax, which includes the work of assessment of mines and public utilities and supervising generally the property tax laws of the State, amounted to \$67,086.88 in 1936.

The cost of issuing operators' licenses was \$17,362.25 in 1936, which was equal to the revenue brought in from that source. Likewise, administration of the Motor Vehicle Registration laws can scarcely be compared to the administration of an ordinary revenue law. It is recognized that the cost of issuing license plates is greater than the cost of administering any type of revenue law from which the same amount of revenue can be obtained. Naturally, the administration of this law tends to increase the percentage cost of collection in administering the revenue laws which have been entrusted to the Tax Commission.

By eliminating these three items from the administrative costs, it will be found that the cost per tax dollars in 1935 was only 2 41/100 cents and 3 6/100 cents in 1936.

The increase for the first year of the current biennium was due wholly to the increase of expenditures for permanent improvements. We are certain that costs for the second year of the current biennium will be less.

Increased costs were incurred in the property tax work, because of the intensive revaluation work which was carried on, and is as yet not completed. Expenditures at this time enabled us to secure Federal funds with which we hope to be able to complete the work.

CONCLUSION

Finally we respectfully submit that no additional taxes be added to the list of those which are already in force, unless enactment of a homestead exemption law makes that necessary. It is our candid opinion that instead of adding new taxes, the main work of the State in this field should be a more effective and successful administration of the taxes which we now have. To that end we have made recommendations for changes in the present laws. There is an old adage among tax administrators that "90% of the effectiveness of the tax laws is in their administration." Elsewhere in this report we have called your attention to the fact that we are seeking to make the administration of the present laws more effective.

The members and employees of this Commission stand ready to assist members of the Legislature desiring more detailed explanations of the material submitted herewith, or to supply such other statistical information as the Legislature may require.

RECOMMENDATION BY MR. ARNOVITZ AND MR. HAMMOND

The undersigned who have been designated as "fulltime" members of the Tax Commission present the following report and without consulting the two members who are designated by law as "part-time" Commission members.

The State Constitution provides that "there shall be a State Tax Commission consisting of four members." Prior to the 1933 session of the Legislature the members of the Tax Commission were required to be in continuous session throughout the year. The 1933 session of the Legislature put into operation a plan whereby the Commission was required to be in continuous session from February 1, to August 15, of each year and to meet at least once a week from August 15, to February 1, of each year. A part of this plan was to designate two commissioners as "full-time" and two as "part-time." The two "full-time" commissioners were to remain at their posts during the whole of the period between August 15, and February 1, as well as during the time between February 1, to August 15.

The splitting of the Commission in this manner makes for a very awkward and unsatisfactory situation. During the period from August 15. to February 1, when only one meeting each week is held, it is absolutely impossible to carry on the work effectively. It has become necessary for the "part-time" members to stay at their posts for more time than they are paid, and they have generously donated their time in order to help prevent a congestion of the work. But that is unfair to them. and furthermore, it is absolutely essential that the Commission have available its membership at all times during the year in order to accomplish its manifold responsibilities.

We, therefore, earnestly recommend that the law in force prior to 1933 with respect to the membership of the Tax Commission be reenacted. There is too much at stake in the administration of Utah's tax system to continue longer the present ineffective plan. The practice does not result in economy and even if it did, economy could better be practiced elsewhere in the operation of the department, where the results of economy would not be so detrimental as is the practice of the present method of operation of the Tax Commission.

Analysis of the Operation of the Sales Tax Act Fiscal Year 1936

To properly interpret and analyze the tables that follow, it is important to be familiar with the provisions of the Act and to study the following explanations of these charts.

The statements have been developed solely from the information contained in the sales tax returns as filed pursuant to the provisions of the Act. In Statement Number 60 your attention is called to the fact that the amount shown as wholesale sales does not represent the total wholesale sales in this State, as many wholesalers report only that volume of their business which is retail and taxable. For this reason and also due to the fact that many transactions, such as the sale of real property, are not taxable under the Act, the amount shown as gross sales does not truly report the year's gross sales in the State.

In Statement Numbers 62 and 63 the returns have been analyzed by types of business. It must be remembered in studying these charts that practically no seller in this State sells only one commodity; for instance, drug stores and department stores while they have been classified as such, usually sell some food, furniture and other commodities. We have been forced, therefore, to classify businesses according to the commodity of which they sell the greatest apparent volume.

Statement Number 64 presents the sales, deductions and tax classified by counties. In this schedule under the heading "Unclassified" are included the deductions of chain stores. The sales tax returns are so drawn that a chain store system may report one schedule of deductions for the entire system, but must itemize net sales and tax according to the location of the various stores. We have also found it impossible to classify by county, taxable

sales of public utilities, as these do not necessarily fall within the boundaries of any one county.

Statement Number 65 is a similar analysis for all cities in the State whose population exceeds 2,500.

Statement Numbers 66, 67 and 68 analyze information on the operation of the Act as to chain stores and non-chain stores. For these schedules we have arbitrarily defined a chain store as a seller or vendor with more than one place of business. We have included the Utah Liquor Control Commission among the non-chain group. We have tabulated public utilities as a separate group with the exception of the arrangement of Statement Number 68.
