About the Cover:

The purpose of the process/data class matrix is to show data class creation and usage. A "C" identifies the process responsible for the creation of a data class. A "U" identifies processes which use a data class.

All of the "C's" on the cover have been obliterated by the shaded line running through them and thereby clearly delineate to the reader the interrelationship between data class and process so far as the "create" aspect is concerned.

By showing which processes both create and use each data class, the matrix suggests interdependencies among the various processes. This has special significance in the planning of future shared data systems.

For more information on Utah Systems Planning, refer to page 23.

TWENTY-SIXTH BIENNIAL REPORT of the UTAH STATE TAX COMMISSION VOLUME II

David L. Duncan Chairman

Douglas F. Sonntag Vice-Chairman

Georgia B. Peterson Robert O. Bowen *Commissioners*

Phillip E. Procter Executive Secretary

Vernon J. Christensen Editor-Contributor

For the fiscal year July 1, 1981 to June 30, 1982

UTAH STATE TAX COMMISSION

OFFICE OF THE COMMISSIONERS STATE OFFICE BUILDING SALT LAKE CITY, UTAH 84134 801-533-5831

DAVID L. DUNCAN - CHAIRMAN DOUGLAS F. SONNTAG - VICE CHAIRMAN GEORGIA B. PETERSON - COMMISSIONER ROBERT O. BOWEN - COMMISSIONER

SCOTT M. MATHESON - GOVERNOR

Dear Governor, Legislators, and Interested Citizens:

We are pleased to present our Twenty-sixth Biennial Report (VolumeII) for the fiscal year 1981-82, made in compliance with Section 59-5-46, Utah Code Annotated, 1953, as amended.

The State Tax Commission is responsible for collecting most of the state's revenues. We also supervise the administration of local property taxes which provide a significant portion of the funds for local government, as well as the State Uniform School Fund. Our role as the State Board of Equalization takes on added significance as the public increases its use of the property tax appeals process. This role will become one of manifest importance as a result of the factoring process duly ordered by the Tax Commission in December 1980 and to reoccur in each subsequent even-numbered year. Hence, a new factoring order has been issued in 1982 to be utilized in computing property taxes for 1983. The Tax Commission did this in keeping with its constitutional and statutory mandates to assure state wide equity and uniformity.

The passage of Proposition 1 responds to a long awaited and much needed change to further insure equity in the tax burden between commercial and residential properties. It also brings with it some challenging administrative problems to both the Legislature and the Tax Commission. We will look forward to working with you to resolve these problems.

Our report summarizes the taxes we have collected in the past year. We also wish to emphasize reorganization and the employment of automation has helped to demonstrate or concern and effort towards enhancing the cost effectiveness of the Commission and State government.

Some of the more important and interesting issues affecting the State's tax future are discussed. Additionally, we have presented a brief review of recent tax legislation, as well as a preview of recommendations for further action. As concerns about taxation and the Utah economy become greater, we are sure that this report will be a useful tool to you.

Sincerely,

Havid Lohmcan

David L. Duncan, Chairman

Janglas & Sonutag

Douglas F. Sonntag, Commissioner

Robert O. Dowen

Robert O. Bowen, Commissioner

Georgia B. Peterson, Commissioner

ORGANIZATIONAL OVERVIEW

The Utah State Tax Commission is headed by a four-member Commission with not more than two members from the same political party. Members are appointed by the governor with the consent of the senate. The commissioners serve a four-year term. The legislature determines their salaries.

The commissioners function in the capacity of the State Board of Equalization wherein they equalize evaluations subject to tax laws. The board may act on its own initiative to correct valuations on property which has been over-assessed, underassessed or non-assessed. The commissioners also act as a board of appeals to hear appeals from decisions of county boards of equalization.

The commissioners perform a quasi-judicial function in matters involving any of the taxes administered by it. A taxpayer may initiate proceedings which can result in either an informal or formal hearing before the Commission.

Finally, the commissioners are the executive directors of the entire Tax Commission—a department which consists of eleven separate divisions employing a total of some six hundred employees. As such, they may formulate policy and promulgate rules and regulations to assist the various divisions of the Tax Commission in effectively interpreting the laws they are charged with administering.

H. Floyd Tanner, Director

Gil Naisbett, Assistant Director

The Revenue Accounting Division of the State Tax Commission is responsible for the accurate receipting and depositing with the State Treasurer of all tax revenues collected by the Tax Commission. Also for the establishment and maintenance of accounting records to facilitate the publication of accurate and informative reports and statistical information. General and Subsidiary Ledgers, Journals, and other records are maintained to assist in this responsibility.

Other specific responsibilities of the Revenue Accounting Division include preparation of refund vouchers; safekeeping of surety bonds and other negotiable instruments and securities deposited by taxpayers; control over the sale of cigarette revenue stamps; maintenance of the Tax Commission Revolving Fund used for change funds in various branch offices; payment of petty cash items and travel advances; control over returned checks; and licensing of cigarette, motor fuel and special fuel dealers. The quarterly distribution of all local option sales tax, mass transit tax and transient room tax back to the participating localities is also a major responsibility of the Revenue Accounting Division.

Figure A shows the level of property tax and excise taxation during the past 10 years. As can be clearly seen in Figure A and Table 3 (appendix), property taxes are assuming a smaller role in total revenue collections, while excise taxes' percentage of the total continue to increase.

Figure B illustrates, with pie charts, the funds into which excise tax revenues are deposited and shows which taxes provide the greatest source of revenue for each fund.

Appendix tables 1 and 2 show excise revenue collection comparisons and tables 4, 5, and 6 show distribution of local sales tax, transient room tax, and transit authority tax to the participating units of government.

COMPARISON OF PROPERTY TAX AND EXCISE TAX COLLECTIONS

AUDITING

Don Bosch, Chief Auditor

The auditing division has recently effected a reorganization to a functional program consistent with the recommendations contained in the Tax Management System Report. The division now has an office section with Horace Gailey as the assistant director, a field section with Reid Lloyd serving as the assistant director and a third group, the oil and gas audit team under the supervision of assistant director George Bowman.

Rick Leimback is in charge of a program to train auditors in all tax areas which will permit us to reduce the potential number of times a taxpayer may be contacted for an audit. All taxes will be reviewed at one time.

The Tax Management System is being implemented throughout the commission, and the auditing division is correlating its activities with the other divisions who are also initiating innovative and far reaching changes in the field of tax administration. The income tax returns, for example, were reviewed this year through use of extensively increased computer applications. This has eliminated the need for a number of review functions formerly performed by auditors and has left the auditors free to perform more meaningful audit tasks. A side benefit of the data entry is the additional statistical information available that provides us with the ability to select the accounts that will produce the most effective desk and field audits. Also, the computers have detected errors that resulted in tax adjustments of almost 1.5 million dollars through June 30. 1982.

We have expanded our out-of-state audit program extensively and have initiated several new audit programs that involve oil and gas producers. These efforts are reflecting substantial results in additional tax billings with over a half million dollars in oil and gas audit deficiencies; 1.6 million in sales and use tax audit deficiencies; 1.9 million in corporation franchise taxes and \$60,000 in motor fuel taxes. These amounts resulted from just a few trips in 1982. In August, a team of auditors began a review of U.S. Mineral Management records in Casper, Wyoming and Albuquerque, New Mexico. Preliminary investigation indicated a probability of significant recoveries for Utah in this review of Federal Royalty payments.

At the time of reorganization, a new section for compliance and enforcement, under the direction of Bill Gray, was established. Several new techniques and procedures have been developed with the help and cooperation of the Attorney General's Office to insure that each person pays a fair share of taxes. These procedures will resolve some of the problems created by illegal tax protestors who use schemes to unlawfully evade paying their fair share of the costs of schools and state government services.

The training program mentioned earlier, together with the newly-created program, produces flexibility that permits us to target problem areas and give them maximum coverage.

The amounts shown in table 7 indicate that audit recoveries are a significant item and we are still not reaching a level of diminishing returns on our audit investment. An increase in the number of auditors should prove to be a wise investment as the account volume increases in just about every one of these tax areas.

COLLECTIONS

Kent H. Price, Director

The Collection Division, previously responsible for maintaining individual accounts and billing delinquent taxpayers for thirteen different taxes has experienced three years of extensive change. Organization of groups handling specific duties rather than groups specializing in certain taxes has increased efficiency. Computerization of withholding and income tax has reduced account maintenance. As the automation of sales and special fuel tax is refined, it also promises to reduce the clerical duties of the division. Income tax is processed through the automated "Gotcha" program which applies refunds to previously delinquent taxes. During the first nine months of 1982, total collections effected through this system were approximately \$675,000.00. Change became a necessity in order to stay within budgetary guidelines and still handle the tremendous increase in the volume of accounts due primarily to Utah's growth in its economy and population.

Attention is now centered on the specialization of more advanced collection procedures such as personal contact by telephone, field representatives or eventual legal actions when all other efforts have been exhausted. Procedures and goals are being developed with standards of performance being established for additional employees. Performance is being monitored and the needs of collectors assessed. In a cost ratio report prepared by the division, a monthly average of \$18.60 was collected for every dollar spent. This represents a total collection of approximately \$12,000,000.00 for the fiscal year ending June 30, 1982. Specialization of the division will create even more productive, professional employees.

APPEALS

Jerry Larrabee, Director

The Commission has the responsibility as a quasi-judicial body to investigate facts pertaining to an appeal, to hold hearings (formal and informal), and to draw conclusions and exercise discretion of a judicial nature in all tax areas. The appeals come to the Commission in six major areas: (1) property taxes (locally assessed); (2) property tax (state assessed); (3) personal property; (4) sales and use tax; (5) income tax and miscellaneous taxes.

The Commission has organized a staff of two people to assist in the managing and investigating of appeals and setting of hearings. This procedure functions well and has helped the Commission handle the increased number of appeals.

The Commission considered nine hundred and three appeals having a combined tax revenue of \$13,505,035.00.

TAX DOLLARS UNDER APPEAL

13

Robert Stringham, Director

The Personal Property Division is responsible for promulgating assessment standards, policies, programs, and procedures to insure uniformity and equity in the local assessment of personal property by each county assessor. Each year, committee meetings are held, a program at the Assessor's School is presented, and publications, schedules, and other information are mailed to the assessors in an attempt to create a common philosophical, informational, and procedural basis for the assessment of personal property.

This division aids in the assessment of licensed vehicles utilizing the computer Mail Out Program. The Mail Out Program assesses the lion's share of motor vehicles, which had a total assessed value of over \$300 million in 1981, according to figures compiled by the State Assessed Property Division.

Passed in 1969, Section 59-5-110 of the *Utah Code Annotated* established for this division a program of routinely auditing 20 percent of each county's personal property accounts each year. Again, figures compiled by the State Assessed Property Division for 1981 show that locally assessed personal property other than licensed vehicles exceeded 430 million.

During the fiscal year 1982, we audited accounts having a total assessed value of 45 million. The Audit Program resulted in an increase in assessed value of over 18 millon or an increase of about 40 percent.

Each county pays a portion of the cost of the Audit Program. Please refer to Figure E which graphically depicts ratios of revenue to cost. The number of counties is on one axis and on the other the ratios of additional revenue collected to revenues expended due to the Auditing Program. The overall state average is 13:1 this year compared to 10:1 for last year.

Figure F compares the net assessed value increase from the Auditing Program for the last five fiscal years.

FIGURE E

FIGURE F

LOCAL VALUATION

Joseph Dunlop, Director

The past fiscal year has seen the reappraisal of two counties, Beaver and Uintah, that had previous contracts with Local Valuation. This leaves Millard County as the last county with a contract under the old reappraisal program. The completion of this county will bring to the close the reappraisal program.

The emphasis of the division has turned to the auditing of the county assessors' records and providing assistance of appraisal personnel. The Sales/ Assessment Ratio Study is the backbone of the auditing function. This study shows the effectiveness of the county assessors in maintaining their county's level in comparison to the other counties in the State. This year's study shows the effect of the first factoring ordered by the State Tax Commission, which has brought closer uniformity to the level of assessment in the State, comparing county to county. County assistance has been rendered to many counties from updating records for those counties on the State C.A.A.S. to appraisals and appeals.

Washington, Tooele, Emery, and Wayne Counties have had their farm land reclassified for the Farmland Assessment Act during this same period. This process is done from the most up-to-date aerial photographs and physical inspection of property by the staff at Local Valuation.

Grounds have been laid for an expanded auditing of properties that are on the F.A.A. to insure compliance with the statutes and regulations. This will provide additional control of the program for the county assessors.

The computerized commercial card that was developed last year has been used by five counties: Duchesne, Wasatch, Rich, Daggett, and Morgan.

The State Tax Commission annually values several categories of property which cross county and state boundaries. These properties include airlines, bus lines, car companies, gas distribution companies, pipeline companies, power companies, railroad companies, terminal companies, water companies, mining companies and oil and gas companies. Assessment rolls are prepared and delivered annually to the county auditors in the counties where the properties are located. The valuation notices are prepared from appraisals made by the Tax Commission and from personal property and production returns filed by the companies.

Tax Commission appraisers periodically visit these properties to update appraisals. As well as making appraisals of buildings and improvements, the Tax Commission has an ongoing audit program. All auditors are certified appraisers and are able to make appraisals at the time the audit is made.

Cities, towns and special taxing districts are responsible for reporting all annexations to the Tax Commission. Current boundaries are necessary in apportioning values of state-assessed properties among taxing units. Counties must report the mill levy of each taxing unit to the state to be reviewed for compliance with statute. Table 8 (appendix) represents the total assessed value for all properties in 1980 and 1981. Assessed values statewide increased 7.29% to \$6,010,968,428. Total taxes rose 10.09% as shown on Table 8 (appendix). The largest percentage increase in locally assessed properties was for livestock (12.06%). The largest percentage increase in state-assessed properties were oil and gas companies (41.58%) and airlines (26.14%).

Figure J graphs the percentage of assessed value attributable to each class of property. There was little fluctuation between 1980 and 1981 in the distribution of assessed value for the different classes of property. The assessment level for all class of property was 20% for 1981.

Figure K shows the distribution of property tax dollars in 1981.

Table 9 (appendix) compares the distribution of property taxes according to purpose for 1980 and 1981.

Property taxes from all classes of property from 1972 to 1980 increased 246% from \$169,207,884 to \$417,646,199 (Figure I). Assessed value of all properties increased from \$2,060,517,849 to \$6,010,968,428 or 291%. In Figure L the growth of state-assessed properties has not kept up with locally-assessed properties. This is partially due to the lowering of the assessment level from 26.5% (1971) to 20% (1981).

MOTOR VEHICLE

Ronald Posselli, *Director* Edward Berry, *Asst. Director*

ACCOMPLISHMENTS:

Creativity, innovative ideas and hard work have resulted in a wide range of accomplishments for the Motor Vehicle Division in FY 1981-1982. Some of these achievements are noted below:

• The automation of personalized license plates has greatly improved customer service in this area. The initial entry of application information on Four-Phase, will generate, from word processing, all other correspondence needed in a given transaction.

• The centralization of the mail program in the Salt Lake Fairgrounds office has greatly reduced the capital outlay formerly needed to supply offices with the equipment required for individual branch operation. Staff reduction in branch offices is also a positive aspect of this centralization.

• There is a more consistent, efficient operation at the Motor Vehicle branch offices, throughout the state, because of special reorganization and training programs effected. "Information," "renewal only" and "dealer only" areas in the larger branches to assist taxpayers and speed up processing, the combined function of EO/Cashiers to eliminate the "stand-in-two-lines-to-wait" problem, have all been incorporated in the branch office procedures. These innovative ideas have been tested successfully at the Fairgrounds office.

• The implementation of word processing assures more efficient handling of all correspondence at Motor Vehicle. Given the extremely large volume of written communication in this division, word processing has proven to be one of this year's major improvements.

• A systems development group to generate and maintain new computer programs has been organized.

• The E/O Cashiering section has stepped up the training schedule at the Fairgrounds office to include cross-training in the prorate and mail renewal program. This special training will provide backup help when it is needed in any of these sections. We are also working on a training period in the edit research area for information personnel.

• Three new states are now figuring Utah prorated fees and remitting these fees with their aplications. All personnel are being trained in the examining/

cashiering functions and new forms are being designed which will no longer become outdated at the year's end. The Pro-rate section has improved all collection methods. The effective use of new cash registers and better procedures for depositing monies in the bank immediately have also been established.

• Personnel records have been computerized, giving ready access to merit dates and other important personnel information.

PROJECTIONS:

• The "Motor Vehicle Laws and Regulations" will be updated to incorporate the supplements of the past four years and to amend the current indexing.

• Utah has forwarded reciprocity agreements to the states of Connecticut, Maine and South Carolina and is working with New Mexico on a mini-IRP Agreement. These are expected to be signed very soon. Extensive work is being done to increase the value of Utah "base plate." We are also anticipating the mailing of laser printed prorate and special fuel applications.

• Automation of internal files, i.e. instate and outof-state undercover cars, will soon be underway.

• Extensive cleanup of existing files, followed by a carefully controlled maintenance program should enhance significantly the "plate-by-mail" program.

• The automation of the "Impound" function is also a goal for the current year.

SUMMARY OF TRANSACTIONS FOR FY 1981-1982:

Duplicate Titles & Duplicate Registration 107,581
Certificates of Title
M.V. Registration1,356,852
Vehicles Impounded
Impound Sales Conducted
Vehicles Sold at Impound Sales
Prorate Applications Processed (representing
in excess of 200,000 vehicles)
Fuel Permits Issued
Revenues collected from all
Motor Vehicle transactions

MOTOR VEHICLE BUSINESS ADMINISTRATION

John A. Burt, *Director* Dale S. Brown, *Assistant Director*

The Motor Vehicle Business Administration is charged with the responsibility of licensing and regulating all persons, firms or corporations who are involved in the manufacture, distribution, sales, or dismantling for salvage of all motor vehicles of a type subject to registration under the provisions of the Motor Vehicle Act.

The Motor Vehicle Business Administration works closely with the law enforcement agencies and county attorneys in helping to enforce the Motor Vehicle laws. This division's investigatory activities include: inspections of places of business, peace officer inspections, impounded vehicle identification number (VIN) verifications, impounded vehicle sales, consumer complaints, auto theft, fraud and enforces provisions of the Motor Vehicle Act. Businesses regulated through this division include: new and used car dealers, trailer dealers, motorcycle dealers, transporters, dismantlers of motor vehicles, manufacturers, distributors and representatives. Permits issued include: intransit, temporary, junk and dismantling. Special plates (dealers, dismantler, transporter and manufacturer) are issued through this division.

The 1981 Utah Legislature increased fees of licenses issued by the Motor Vehicle Business Administration. With these increases effective in 1981, the Motor Vehicle Business Administration collected approximately \$10,000 over and above their approved budget for 1981-1982.

Legislation is needed to resolve problems which have arisen in the motor vehicle salvage operation. It is suggested that some of the larger salvage operators, including crushers, shredders, etc., be required to post a bond sufficient to protect the public against loss through illegal disposal of possible stolen vehicles.

Amended legislation is needed in order to clarify the total aggregate liability on the \$20,000 surety bond required by Motor Vehicle Business Administration before a dealer's license can be issued.

INVESTIGATIONS

Until recently, the typical approach to the development of data processing applications has been to undertake each one by itself. Each one was developed for its specific purpose with not enough thought given to the potential value that existed in sharing information across system application boundaries or without considering data as a resource to be valued and controlled. The result often has been redundancy of data, misuse of data processing resources, and insufficient return on the data processing investment as certain government information needs have gone unmet or been postponed.

Utah Systems Planning (USP) is a structured, documented methodology to define the environment in which data can be managed as a resource. This on-going process was established for planning and managing information needs for the State of Utah. It identifies information needs, and establishes information systems and data systems to support the needs. The USP is a plan which supports both short-and long-term information needs and is integral with the governmental plan.

Basic to the USP philosophy is a top-down analysis of information needs in order to create a plan for building information systems from the bottom-up. Activities performed to reach this objective include definition of the governmental objectives, definition of the governmental processes, definition of the data classes, and definition of the information architecture. Once the data needs have been analyzed from the top-down, a bottom-up implementation can proceed. This is done by organizing logically related data into data bases and building information systems that will use the data to provide the information required to support the governmental processes, thereby supporting the objectives of the state.

A data base is a non-redundant collection of interrelated data items processable by one or more applications. This simply means that individual data items appear only once (or at least less frequently than in normal file organizations) in the data base and that the files are constructed with an ordered relationship that allows data elements to be tied together, even though they may not be in the same physical record. It also means that data is shared and used by several different subsystems.

Development of a data base has some obvious benefits. By consolidating files, the user can obtain better control of data and reduce storage space and processing time. Use of a single information source makes processing more accurate because all subsystems refer to the same data. It becomes apparent that a data base system can help overcome some of the complexities of data management.

The purpose of USP is to develop a structure system based on governmental processes not usually affected by organizational changes or the way of managing the data processing resources. The emphasis is on data integrity when the system is created. This is accomplished by designating data responsibility, creating a single data source with parallel distribution, central control of policy and planning information systems, organizational independence of data, and data resource sharing. To support the goals more efficiently and effectively, USP is aimed at providing major information systems that will produce improved relationships between the systems, managers, and users. This will be accomplished through systems that are responsible to user requirements and priorities. The results will be management's control of data as a resource, fulfillment of information needs, and the elimination of redundant data.

Priorities must be established once the topdown analysis has been completed. Since the USP is ongoing and cannot be developed and implemented at one time, subsystem architecture and criteria are analyzed. The priorities are dependent on the following: (1) what systems exist and are not dependent on other systems, (2) which systems can be operated effectively and efficiently, (3) which priorities are most critical in terms of cost-benefit and data redundancy or duplicated systems, and (4) what changes are needed to manage and operate high priority projects. Recommendation of an action plan follows this analysis and helps in deciding which projects to incorporate in the budget; also which resources will be used to implement the decision. Included is a time-flow analysis showing project interaction.

To implement the USP and see it to fruition, certain critical factors had to be met. Governor Matheson assumed leadership as the executive sponsor of the USP. His commitment was critical and his leadership was necessary for the success of USP. The selection of the USP team and its management was also very important. Department head cooperation was particularly valuable by allowing key personnel to be assigned to the USP project on a full-time basis for two months. Assistance was needed and received from the legislative and judicial branches of State Government. Each realized that there were problems. Each recognized that data is a valuable resource and acknowledged the potential cost savings and benefits in data management that could result from the USP study. The realization that the USP would be an ongoing activity created a process that will continually identify and support the State's new needs and objectives and incorporate them into the process. This, in ef-

fect, created an evolutionary system building on the current modular system and incorporating it into an information system. Management's involvement in maintaining the integrity of the data was critical. Without it, the data becomes historical rather than current, and therefore of less value.

MULTISTATE TAX COMMISSION

In their fourteenth annual report, the Multistate Tax Commission stated that their purposes are:

to bring about further uniformity and compatibility to the tax laws of the various states of this nation and their political subdivisions insofar as those laws affect multistate business, to give both business and the states a single place to which to take their tax problems, to study and make recommendations on the continuing basis with respect to all taxes affecting multistate businesses, to promote the adoption of statutes and rules establishing uniformity, and to assist in protecting the fiscal and political integrity of the states from federal intervention.

Utah has been a member of the Multistate Tax Commission for thirteen years. MTC membership includes 20 states and the District of Columbia. In addition, there are eleven associate member states. As a member of the MTC, the State of Utah receives a variety of benefits. In 1977, Utah began participating in the MTC joint audit program. The following table illustrates the benefits that the State has reaped from participation in this program.

Fiscal Year	Return per \$1 Spent	Amount
1978	\$ 2.2	\$ 54,805
1979	17.7	620,788
1980	2.5	89,045
1981	11.9	417,926
1982	7.6	264,568

Fiscal Year 1983 is starting out to be a high productivity year in terms of participation in the joint audit program.

The Multistate Tax Commission provides an ex-

cellent means for member states to exchange ideas and information. An example of this exchange occurred with regard to the auditing of oil and gas production. At last year's annual meeting of the Multistate Tax Commission, Utah Tax Commissioner Robert O. Bowen presented a paper on behalf of Commission Chairman David L. Duncan, which expressed Duncan's concern over the fact that states are not receiving all of the oil and gas royalties and severance taxes to which they are entitled. Duncan suggested that the states act cooperatively through the MTC to study this situation, to make recommendations and to establish some type of joint effort to remedy this situation. In response to Chairman Duncan's paper, the MTC established a Gas and Oil Royalties and Severance Tax Force (GORST), which met last September to explore and develop strategies for ensuring that states received their fair share of revenues in the form of oil and gas royalties and severance taxes. GORST held its first meeting on April 20 in Denver and its membership consists of three state representatives plus representatives of a major oil company and an independent producer.

The Multistate Tax Commission also offers a variety of ways for states to establish credibility and acceptance of the "unitary business concept." The "unitary" concept of apportioning the income of multistate and multinational corporations asserts that one must look to the total value of the total business in order to determine a value of the portion located in a particular state, even though business activity is conducted by more than one corporation. The MTC offers a variety of seminars dealing with legal aspects of the "unitary concept" and also offers substantial legal assistance to states with pending litigation concerning the "unitary concept." Utah has gained from MTC membership in many other areas than just the joint audit program.

THE IMPACT OF A PROPOSED SEVERANCE TAX ON THE UTAH UNDERGROUND COAL INDUSTRY

On the eighteenth of August, 1982, Keith Kelly of the Economic and Statistic Unit of the State Tax Commission gave the legislative Revenue and Taxation Committee a brief outline of the results of his study on the "Impact of a Proposed Severance Tax on the Utah Underground Coal Industry." Mr. Kelly worked on this study under the direction of tax economist Doug Macdonald and some of the general conclusions he reached are:

- 1. The demand facing most firms in the Utah coal industry is elastic. (The quantity of Utah coal sold in the long run is significantly influenced by its price.)
- 2. Significant economies of scale appear to exist in the Utah coal industry.
- 3. Between 1978 and 1981, a substantial portion of the Utah coal industry reported a loss for tax purposes.
- 4. A severance tax of 2% or 5% on gross receipts would not make any profitable firm show a loss.
- 5. A severance tax would cause some decrease in the amount of Utah coal produced, along with a less significant impact on price.
- 6. A severance tax would add to cost pressures that make the Utah coal industry oligopolistic.
- Because of the competitive nature of the coal industry, most of the severance tax burden would fall on producers and would be felt by out-of-

state stockholders of large corporations that own Utah coal producing firms. Short-run exceptions to this conclusion are coal operators selling on long-term contracts with tax pass-through clauses and producers that are integrated with public utilities.

8. In the short run (for the duration of current contracts), a minimum of 39% and a maximum of 78% of a severance tax would be exported to out-of-state consumers through long-term contracts with tax pass-through clauses. In the long run, roughly 71% of a severance tax would be exported to out-of-state stockholders of corporations that own Utah coal operators. Because of the complicated nature of tax incidence questions, these estimates of severance tax exportability must be made and interpreted cautiously.

A severance tax of 2% of the gross value of coal was proposed during the last legislative session. The tax has been justified as a return to the state of a natural resource heritage, a means of slowing depletion of the state's resources, a cushion against community service strains produced by rapid growth in mineral development, a means of capturing unearned economic rents (profits) and a tax whose burden would be primarily borne by out-of-state consumers. Proponents have also pointed out that every other major Rocky Mountain coal-producing state has enacted a severance tax.

SUMMARY OF 1982 REVENUE AND TAXATION BILLS

- SB 44 Assessed Valuation and Tax Notice (Sen. Charles Bullen)-Arranges the time schedule to accommodate a combined tax and assessed valuation notice and streamlines other procedures, such as a uniform application date for indigent and circuit breaker abatements, in the property tax process.
- HB 142 Residential Property Assessment (Rep. Franklin W. Knowlton)-Provides for a reduction from 20 percent to 15 percent of fair market value in the level of assessment for residential property if the voters approve a constitutional change in the Tax Article at the November Election; and repeals certain deductions required in assessing local property.
- SB 40 Depreciation Deduction for Mining (Sen. Charles W. Bullen)-Phases in over a fouryear period a change in the deductions available in computing values for property tax purposes by providing for a depreciation allowance rather than full cost deductions.
- SB 13 Tax Exempt Agricultural Land (Sen. Charles W. Bullen)-Excludes agricultural land which becomes tax exempt from rollback tax payments provided it remains in agricultural use.
- HB 38 Tax Deferral Requisities (Rep. Lorin N. Pace)-Allows the county commission to defer payment of real property taxes upon application provided approval is granted by secured parties and provided the deferred taxes are an interest-bearing lien due when the property is sold or conveyed.
- SB 41 Sales Tax Exemption on Vending Machine Sales (Sen. Charles W. Bullen)-Provides that vending machine items sold for under one dollar shall be

taxed at 120 percent of their cost instead of at the retail sale price.

- SB 6 Cigarette Tax Increase (Sen. Karl N. Snow, Jr.)-Provides for an increase of the excise tax on cigarettes from ten cents to twelve cents a pack.
- SB 16 Circuit Breaker Modifications (Sen. Haven J. Barlow)-Provides a property tax credit for the elderly and single heads of households whose income is between \$9,000 and \$9,999, of \$25 for homeowners and of 1/2 of 1 percent for renters.
- HB 92 Tax on mineral Production Withholding (Rep. Dix McMullin)-Provides a mineral producer withholding of income for tax purposes of 4 percent on all payments for mineral production; and allows a credit for the amount withheld to all people filing an income or franchise tax return in Utah.
- HB 88 Tax Levy for County Zoos (Rep. Sherman D. Harmer, Jr.)-Allows counties to establish zoos, accept donations to maintain them and allows a county one mill levy until June 30, 1983 for the support of any such zoo.
- HB 35 Transportation Permit Fee Increase (Rep. W. Robert Phelps)-Increases the registration fee for temporary permits, and the fees for special overweight permits; and provides for a special overweight permit for 365 continuous days at a fee of \$100.00.
- HB 33 Vehicle Registration Fee Increase (Rep. Don R. Strong)-Increases vehicle registration fees by \$5.00, except for fees of vehicles in excess of 9,000 pounds which are set forth in the schedule contained in the bill.

FOURTH ANNUAL UTAH TAXES NOW SEMINAR

This year's annual Utah Taxes Now Seminar was held on the 18th of March and, as has been the case since 1979, was jointly sponsored by the Utah State Tax Commission and the Utah Taxpayers Association. The purpose of this seminar was to inform the general public on the impact of legislative action regarding taxes in Utah. After a brief welcome from Commissioner Robert O. Bowen of the Tax Commission (who served as moderator for the seminar) and Jim Thompson, President of the Utah Taxpayers Association, Tax Commission Chairman David L. Duncan delivered the keynote address. His comments generally depicted where we've been, where we are, and where we're going in terms of the economy. He dealt at some length with solutions to our present problems as engendered in the New Federalism and indicated that the greatest threat to its workability is the present national recession.

Other topics discussed were H.B. 68 dealing with changes in the unemployment compensation benefit package, S.B. 12 relating to drivers license fees, H.B. 33 relating to motor vehicle registration fees, H.B. 35 treating temporary permit fees and the mineral lease revenue for highways. Representative Frank Knowlton and Senator Karl Snow gave their respective views on the tax article revision and Senator Charles Bullen discussed recent severance tax legislation stating that "I don't believe this legislation has failed; it has merely been postponed." S.B. 44, the new tax cycle, was explained and the followng is an abridged list of the more important dates.

- May 1 Veterans, blind, and circuit-breaker filing deadline
- June 15 Local governments set mill levies
- July 1 Indigent abatement filing date
- July 21 Combined property valuation and tax notice to be mailed to the taxpayer
- Aug. 1-15 County Board of Equalization meets to hear protest from taxpayers
- Sept. 1 Board of Equalization decision deadline
- Sept.1-11 Taxpayers may appeal to State Tax Commission
- Nov. 30 Taxes due

Extreme controversy arose when Representative Bob Sykes severely criticized the 10.5% increase given all state employees. At the end of the seminar, House Speaker Norman H. Bangerter discussed the current economic conditions claiming that "the 1980's will be a time when we are forced to live within our means." He pointed out that "cost containment in every facet of government is probably the most important step that can be taken to retain fiscal balance."

"There is still one critical balance question which has yet to be resolved in the specification of a high quality state-local tax system. What is the proper distribution of the property tax burden between owner-occupied residential property and incomeproducing property?"*

With the passage of Proposition #1 (Tax Article Revision), the Utah Legislature's hands are now untied in addressing pressing tax needs like the "balance question" involving the proper distribution of the property tax burden. Previously the antiquated Utah State Constitution entirely prevented changes in the Utah tax structure or made these changes extremely difficult to bring about.

Of major concern now, is what the Legislature will do with its newly-found freedom in the area of state taxation. One must remember that nothing in Proposition #1 is self-executing. All Proposition #1 does is allow the Legislature to act. The Legislature now can:

- exempt up to 45% of the value of residential property for property tax purposes
- —establish a property tax on local government property which is located outside of the local government's own boundaries
- exempt property owned by nonprofit organizations used exclusively for religious, charitable or educational purposes
- -exempt livestock
- -allow local governments to share tax and other revenues
- -remove the 75% ceiling upon the amount the state may fund for the public school system
- make other organizational changes in the Revenue and Taxation article of the Utah State Constitution

Proposition #1 requires the legislature to define exactly what a residential property is. Most rented residential properties will be covered under tax exemptions granted as a result of the passage of Proposition #1, but whether that exemption is extended broadly to such situations as 300-unit apartment or condominium complexes where units are rented to transient visitors most of the year is a question that the legislature must face in the next session. According to O. William Asplund, assistant director, Office of Legislative Research, "the concern will be, when do these properties become businesses, rather than residences?" Owners of condominiums in Saint George and Park City are understandably interested in the upcoming legislative action, for in those two communities are large groups of condominium buildings whose owners may use their units only at certain times of the year.

If House Bill 142 is not amended during the next session—either because a controversy develops or because legislators like it just as it is—the defining of "residential" will be left up to county assessors. According to Mr. Asplund, some of the assessors who use the income method of determining rental property values, rather than the market value method, are already applying the 'tri-plex or smaller' rationale. Depending on how eager they are to take pressure from the public, county assessors are variously going to push for rigid definition in the law— it would let them off the hook—or for a broad and general definition which would give them flexibility to meet individual situations.

The Local Valuation Division of the Utah State Tax Commission will be directly affected by the Passage of Proposition #1 on the dual level of assessment of residential and commercial properties. One problem they will have is the lack of commercial sales in the majority of the rural counties. The insufficient sales to create a Sales Ratio Study will have to be supplemented with appraisals of commercial properties.

Further impact will depend on the definition of residential property. If residential property is defined as land zoned for single family residences, then an additional problem is posed by those counties which do not have any zoning ordinances. Any other type of definition poses its own problems.

There will be an increase in the number of properties that will be assessed by State Assessed Property due to the taxability of properties owned by counties and cities outside of their political boundaries.

Proposition #1 finally gives the Utah State Legislature the flexibility to deal with everchanging financial requirements of the State which must be met by an equitable and versatile tax system.

^{*}Cline, Robert and John Shannon, "The Property Tax in a High Quality State Local Revenue System" September 27, 1982

The Property Tax Task Force was established by the Legislative Revenue and Taxation Committee to examine, in more detail, the way the property tax is administered in the State of Utah. Members of this task force include:

Sen. Cary Peterson (Chairman) Sen. Charles W. Bullen

Sen. Omar B. Bunnell

Sen. Carl G. Swan

Rep. Tom Christensen

Rep. John M. Garr

Rep. Franklin W. Knowlton

Rep. Lorin N. Pace

Rep. D. Leon Reese

Rep. James J. White

Mr. George Behunin, Jr. (Superintendent of Carbon School District)

Mr. Tom Bingham (Farm Bureau Association) Comm. David L. Duncan (Utah State Tax Commission)

Mr. Brent Gardner (Utah Association of Counties)

Mr. Jack Olsen (Utah Taxpayers Association)

Mr. Thayne Robson (Bureau of Economic and Business Research - University of Utah)

Mr. William Stump (Kennecott Corporation)

At the most recent meeting of the task force, two significant topics were examined. The first topic, one of great controversy, was the state assessment of mines for property tax purposes. At present, in the State of Utah, mines are assessed by various methods, depending on the type of material being mined. (Refer to the entry on State Assessment of Properties for more information on assessment procedures.) A motion was later made, before the full Legislative Revenue and Taxation Committee, that all mining properties be valued as provided in the current statutes for metalliferous mines.

The second topic of discussion dealt with the clarification of administrative procedures with regard to the property valuation process for state assessed property. It was suggested that the Tax Commission staff prepare written summaries of property valuation processes and that these summaries should be set forth in administrative regulations or state statutes. The areas which require the description of current procedures include the following:

-the assessment of personal property

- -the development of capitalization rates wherever such rates are used
- -the audit policies for state assessed property
- --policies providing access to records and information developed by, or in the possession of, the Tax Commission;
- -the policies and procedures by which interested parties may provide input to the valuation process or appeal the results.

AUDITING OF OIL AND GAS PRODUCTION

As the accountability of oil and gas production became more prevalent, the Tax Commission, directed by Chairman David L. Duncan, began to investigate oil and gas production within the State of Utah. Audit samples of oil and gas companies were made, and from these samples, it was decided that audits should be conducted on all oil and gas production. It was also determined that better methods of reporting production were needed, together with refinements in receiving and utilizing these reports. The Oil and Gas Audit Team was set up in May of 1982 and the Tax Commission also established a committee to develop a reporting system which could be used by all State agencies and would have internal controls to see that oil and gas production is reported correctly. The present method of selfassessment is basically a honor system which has been abused. The committee setting up the data processing for oil and gas visited states that already had a good reporting system and discovered that the New Mexico system was the most compatible with the needs of Utah.

The Data Processing Committee secured New Mexico's software and is using it as a guide to set up Utah's new reporting system along with the necessary data processing capabilities. During the next legislative session, the Oil and Gas Data Processing Committee will request law changes and new laws concerning the implementation and enforcement of this system in Utah.

Because of the Linowes Commission Report (this commission, headed by David Linowes, was formed upon request of Secretary of the Interior James Watt to investigate the reporting of oil and gas production) and other pressures, the federal government has reorganized the oil, gas and mineral division into a mineral management division and has invited state audit groups to join with them in joint audit programs. The State of Utah signed an agreement with this division on July 19, 1982 and a State auditor is currently working full time with them in their Casper, Wyoming office.

It is interesting to note that since the Linowes Commission on fiscal accountability has been in effect, federal royalty revenues have increased 1.4 billion dollars and Utah's share of these royalties has increased from \$14,932,595.00 in 1980 to \$26,890,531.31 in 1982, a 56% increase. Our auditor in Wyoming has informed us that the federal and state audit team has made a substantial initial billing on understated royalty payments.

The State Oil and Gas Audit Team has performed audits reflecting over six million dollars in deficiencies. These audits are on various taxes, fees and royalty payments due the State.

Presently, this Team is working with a group of auditors from the states of Texas and California as well as with auditors from the Federal Mineral Management Office and they are finding the following areas of problems:

- -Excess deduction for partner's equity
- Excess exempt royalty deduction being taken
- -Gas sales understated
- -Unreported price adjustments
- -A lag between the time a well is completed and income is reported
- Excess plant operating costs claimed
- Excess lease fuel claimed

Our auditor working on federal records in Casper, Wyoming, is encountering many difficulties due to the condition of the records. Also, there are several problems that are being worked out as a result of a joint effort involving all of the interested states regarding audit assistance, cooperation and billing procedures. These problems will hopefully be resolved fairly quickly. The federal records are kept in four locations; Casper, Wyoming, Lakewood, Colorado, Salt Lake City, Utah, and Albuquerque, New Mexico.

With the increase in energy resources exploitation in the western United States, the proper reporting of oil, gas and coal production will become more and more of a concern to state governments.

The Tax Commission feels that the audit team will be a valuable, cost-effective tool and together with the new data processing system, will help provide good resources to insure the proper reporting of revenues due.

ANNUAL REPORT Economic and Statistical Unit

The Economic and Statistical Unit of the Tax Commission compiles and publishes statistical reports reflecting the history of tax revenues in Utah and also projects future tax revenues based on models and simulations. These reports are prepared and published under the general powers and duties granted to the Tax Commission by the Legislature to provide information that will facilitate a mandate to equalize the burden of taxation in the State.¹

Recent reports published by this unit dissect business and household tax burdens for the major taxes paid in Utah. Figure Q indicates the initial tax burden on businesses and households in selected western states, which indicates that Utah ranks last compared to these states in percent of taxes paid initially by business. In fiscal year 1980-81, Utah businesses paid 38.1 percent of the \$1.106 billion in major state taxes. The weighted average in the western states for initial taxes paid by the business sector was 44.8 percent. At the other extreme, in neighboring Wyoming, businesses paid 78.8 percent of their state's major taxes.

CORPORATE INCOME TAXES

One of the primary reasons Utah businesses have a lighter tax burden than businesses in its sister states is the relatively low burden on income taxes. Figure R illustrates the tremendous growth of the individual to corporate tax over the last thirtytwo years. During the 1950's, the ratio of individual income taxes to corporate income taxes ranged from 1.39 to 2.38. This means that for every dollar corporations paid in income taxes, individuals paid \$1.39 to \$2.38. As inflation boosted individual incomes into higher state brackets during the 1960's, the ratio went from 2.61 in 1960 to 4.19 in 1969. When the uniform school finance program commenced in the early 1970's, individual income taxes were tied to the federal base and the rates increased. Inflating salaries ratcheting up through the state tax brackets brought real increases in state individual income taxes during the 1970's, while inflationinduced increases in business expense were written off by corporations. The 8.09 ratio for fiscal year 1982 is a marked contrast to the 2.0 ratio which existed in the 1950's.

Figure S depicts who pays the corporate income (franchise) taxes. Figure S indicates that 34.6 percent of the 16,571 active corporate returns reported net losses for the 1980 tax year. Although only 0.9 percent of the returns were in the over \$1,000,000 net taxable income class, these corporations paid 65 percent of the total tax yield (Figure S_2).

Some confusion exists over the interpretation of the no income or loss taxable income class, which filed 23.5 percent of the returns in 1980. Instead of representing firms actively doing business in the state, this category largely consists of firms maintaining their corporate standing, but not necessarily doing business. A closer look at Figures S_1 , S_2 , and S_3 , reveals that while this class filed 23.5 percent of the returns in 1980, these returns accounted for only 0.5 percent of Utah gross receipts and 0.3 percent of the corporate tax, indicating a lack of actual business activity.

A comparison between Figures S_1 , S_2 , and S_3 reveals that the 34.6 percent of the returns in the net loss category had 20.7 percent of Utah's gross receipts, and paid only 0.5 percent of the corporate tax. In contrast, those returns with a net taxable income of \$1,000,000 and over made up 0.9 percent of the returns, paid 65 percent of the taxes and claimed 34.1 percent of Utah's gross receipts.

Figure T illustrates the number of corporate returns, gross receipts, and taxes paid by major industry sector for 1980. Surprisingly, Utah's manufacturing sector paid one-third of the corporate taxes (over \$13 million), earned 30 percent of the gross receipts with less than 11 percent of returns filing. With less than 3.4 percent of the returns, the transportation, communication, and public utility sector earned 9.9 percent of the gross receipts and paid over 19.2 percent or \$7.5 million of the \$40 million in total corporate franchise taxes. Tables 10 through 11 in Appendix A detail exact dollar amounts.

INDIVIDUAL INCOME TAXES

During the 1970's, state individual income taxes increased at a compounded annual rate of 15.8 percent. This contrasts with personal income gains in the state of 12.6 percent per year and federal income tax gains of 13.5 percent per year. Without recent federal income tax cuts which may translate into state tax windfalls (due to smaller federal tax deduction on the state return) the state income tax elasticity would probaly decline in this decade. A narrowing of the state tax elasticity to personal income is apparent due to one very fundamental reason— a great portion of the adjusted gross income is earned by taxpayers already in the highest Utah income bracket (\$7,500 and over). The Tax Commission's ISIM model (Individual Income Tax Simulation Model) estimates that in 1980 56.1 percent of all Utah returns were in the \$7,500 and over bracket. See Figure U. More importantly, 82.3 percent of the adjusted gross income was in the highest bracket. With respect to Utah net taxable income, ISIM estimates that in 1980, taxpayers in the top bracket reported 91.7 percent of all net taxable income. By 1982, 95 percent of Utah net taxable income will come from taxpayers who have already hit the highest state tax bracket.

This means that barring legislative intervention, Utah's once progressive income tax, due to inflation induced salary increases, will be more of a modified proportional income tax in the 1980's. Public School Administrators must not, therefore, expect that real increases in the individual income taxes in the 1980's will keep up with real (due to school population increases) public school expenditure increases.

In 1980, Utah taxpayers, due to real and inflation induced cost-of-living increases, were pushed into higher Federal tax brackets, leading to the 16 percent increase in federal income taxes whereas state tax increases amounted to 10.7 percent. As Figure V points out, the major shifts in returns are from the *under \$20,000* bracket to the *over \$20,000 brackets*. In 1976, the share of returns in the under \$10,000 adjusted gross income (AGI) class was 49.7 percent. By 1980, only 40.5 percent of the returns were in that income class. In contrast, the \$30,000-\$50,000 class increased from 3.5 percent of the returns in 1976 to 11.4 percent of the returns in 1980.

With respect to amount of adjusted gross income (AGI), in 1976, 58.8 percent was in the under \$20,000 classes (Figure W). By 1980, only 34.9 percent of AGI was in the under \$20,000 classes. Only 16.5 percent of AGI was reported in the over \$30,000 classes in 1976, compared to 36.5 percent of AGI in those classes in 1980.

SALES AND USE TAXES

Utah's retail sales and use tax law is a fairly broad based tax. Termed regressive by economists, but perceived as a "fair", proportional tax by the average citizen, the Utah sales tax base includes food, sales of tangible personal property not used as a component part of manufactured items, and certain services, particularly repairs on tangible personal property. In recent years, the Utah Legislature narrowed the sales tax base by the following actions:

1) Completely exempted prescription drugs;

2) Removed farm machinery and equipment from the sales tax base in gradual steps; and

3) Reduced the sales tax on residential fuel sales from 4 to 1 percent.

By categorizing Utah's retail sales and taxable purchases (use tax) into standard industrial sectors, the state tax commission was able to estimate how much of the Utah sales tax was paid initially by Utah businesses. A joint effort with the Utah Taxpayers Association revealed that businesses paid an estimated 42 percent of the Utah sales tax (see Figure Q), even though food items, mostly consumed by households, are in the tax base.

In addition to enabling us to estimate the tax burden, industry data also indicates more complexity in the Utah economy than had previously been imagined. As Figure X points out, large portions of Utah's sales and use taxes come from non-retail industry sectors. In fact, for 1981 almost 46 percent of gross taxable retail sales and purchases occurred in nonretail sectors. Retail sales in the wholesale trade sector comprised 15.6 percent of the total. One reason for this is that many wholesalers also have a substantial amount of retail sales. In addition, many businesses such as electrical lighting stores, under the Office of Management and Budget's standard industrial classification, can only be categorized in the wholesale sector. Notwithstanding these irregularities, Table 25 in Appendix A indicates that almost 46 percent of wholesale trade sales or purchases were in the wholesale-machinery equipment sector.

In 1981, most major industry sector sales increased more than 15 percent. Part of this increase can be explained by the fact that the tax commission coded about 2,000 previously uncoded accounts increasing retail sales in many sectors by over 3.5 percent.

All in all, it can be said that calendar year 1981 was a very good year for Utah's retailers and a big investment year for Utah's mining, construction, and transportation sectors. Food stores, and retail apparel and accessories also increased 20 percent or more. Even sales by motor vehicle dealers rebounded from 1980's 10.4 percent absolute deline, increasing 17.6 percent. Retail miscellaneous sales dropped 1.4 percent primarily due to reclassification of one large chain retailer to general merchandise, causing a significant increase in this category.

Modest increases were seen in retail building and garden, furniture and home furnishings, and eating and drinking establishments. Sales in Utah's service sector increased 17.5 percent, a trend which has continued into 1982.

Sharp increases were experienced in investment

purchases in Utah's mining sector (up 50.3 percent), and transportation (up 43.6 percent). Purchases by coal mines, up 46 percent, were exceeded by expanding investment in Utah's oil and gas fields. Oil and gas extraction purchases were up 103.1 percent from \$61.9 million to \$125.7 million. Even more dramatic were purchases by non-metallic minerals (except coal) which were up from \$7.4 million to \$18.1 million, an increase of 145.7 percent. In the transportation sector, railroad investment was up 78.4 percent from \$27 million to \$48.2 million. See Table 25, Appendix A.

UTAH TAX EFFORT VERSUS TAX CAPACITY

A thorough, but not necessarily perfect method of estimating the states' tax burden has recently been refined and developed by the Advisory Commission on Intergovernmental Relations (ACIR). ACIR's representative tax system calculates *tax capacity* "by estimating the amount of revenue each state would raise if an identical set of tax rates were

¹Subsection 59-5-46(21), Utah Code Annotated

²Advisory Commission on Intergovernmental Relations, Tax Capacity of the Fifty States: Methodology and Estimates, (Washington, D.C.: March, 1982) p. 11.

³Michael Lawson and John Shannon, Advisory Commission on Intergovernmental Relations, "Intergovernmental Perspective," Tax Pressure, Tax Increases and Tax Purity, Volume 8, No. 3, Summer, 1982, p.31. used."² A states' tax effort is measured by the ratio of its total tax collections to its total tax capacity. Figure Y illustrates ACIR's depiction of the Utah tax system. Two of Utah's major taxes indicate that tax effort is significantly greater than capacitygeneral sales and individual income taxes. For the remaining taxes, tax effort is less than tax capacity. While tax efforts of property taxes and selective sales taxes are a little below Utah's capacity, such is not the case for corporate net income, licenses and severance taxes. The table in Figure M indicates that whereas Utah's severance tax capacity is 46.2 percent higher than national average, our tax effort is almost 70 percent below average (at 30.7). With respect to corporate net income taxes, ACIR findings verify earlier statements with regard to a low tax burden. Here Utah's tax capacity is below national average (83.2), while the effort measures only 50.7. Thus, Utah's low 4 percent corporate franchise tax rate would have to be increased to 6.5 percent so that tax capacity would equal tax effort.

*Legend for codes in column four: G = Gasoline and motor fuels; A = Alcohol;C = Cigarettes; S = General Sales; 1 = Individual Income

¹The taxes included in these figures are state and local individual income taxes and general sales taxes. (Local income and sales taxes were included since most states determine whether local governments can impose local income or sales taxes and the rates that the local governments can impose.) The index numbers were determined by multiplying the U.S. average tax rates by the respective individual income and general sales tax bases of each state. Adjustments were made to the general sales tax collections in the cases of Arizona, Hawaii, Washington and West Virginia because these states have much broader sales tax bases than the typical state. In addition, individual income tax collections for the state of New York had to be revised downward because the local individual income tax collections included a small portion of corporate income tax receipts.

²The greater the index number, the greater the degree of utilization of the underlying tax bases. U.S. Average 100.

³Variable rate tax based on percentage of price rather than cents per gallon.

In actuality, Ohio lowered the excise tax on cigarettes from 15c to 14c per pack

but, for the first time, made them subject to the state sales tax. The net effect of this was to raise the tax on cigarettes.

⁵Extended sales tax to cigarettes for the first time.

⁶Reduced income tax.

⁷An additional 3% excise tax on oil companies doing business in Virginia was enacted.

⁸Reduced the sales and income taxes.

⁹California is scheduled to increase its gasoline tax January 1, 1983.

¹⁰This increase in the sales tax was enacted to reduce local property taxes.
¹¹Lowered the variable rate motor fuels tax from 13.5c to 12c. effective through

12/31/82. Also placed a 4% surcharge on all general fund taxes.

- ¹²Eliminated individual income tax in 1980.

NOTES

Plymouth—Due to incorrect information from a business doing a one-time construction job, \$14,016.21 of tax money due Box Elder County was coded to Plymouth. Plymouth should therefore only show a percentage increase of 53.25%.

Enoch—Adopted the Local Option Tax effective July 1, 1981.

Juab County-Received a one-time windfall of Use Tax on equipment purchases of more than \$163,000.

Pickleville-Annexed by Garden City.

West Valley City and Farr West Town—Due to accounting periods, the two fiscal years are not properly comparable. The amounts for fiscal year 6-30-81 are represented by only 3 quarters for West Valley and only 1 quarter for Farr West, while the amounts for fiscal year 6-30-82 are represented by 4 quarters for both localities.

Uintah County—The large increase is due in part to a court decision on industrial annexations. Tax money held in trust pending a decision was awarded to the county.

Local Sales and Use Tax is $\frac{3}{4}$ of 1 percent of net taxable sales or purchases. Presently, the rate is uniform statewide. The revenues are distributed back to the town, city or county in which the sale took place (depending on whether the local option ordinance has been adopted).

TABLE 5 SUMMARY OF DISTRIBUTION OF TRANSIENT ROOM TAX TO PARTICIPATING UNITS FOR FISCAL YEARS 1980-81 AND 1981-82

Weber County	1-1-70	118,695.08	130,097.58	11,402.50	9.61
GRAND TOTAL		\$2,614,758.89	\$3,089,671.71	\$474,912.82	18.16

NOTES:

1. Emery County increased its rate from 11/2 % to 3% effective Nov. 1, 1981.

2. The room tax rates as of 6-30-82 are 11/2 % in Beaver, Cache, Garfield, Iron, Juab, Kane, Rich, San Juan, Tooele and Washington Counties; 2% in Sevier County; 21/4 % in Grand County; and 3% in all other counties.

3. As this is a county tax, all distributions are made only to the counties. The tax applies to the rental charge for any suite, room, or rooms in a motel, hotel, motor court inn, or similar public accommodation for fewer than 30 consecutive days. This tax is over and above the applicable sales tax. Room tax is remitted on a quarterly return separate from sales tax.

TABLE 6 SUMMARY OF DISTRIBUTION OF LOCAL TRANSIT AUTHORITY TAX TO PARTICIPATING UNITS FOR FISCAL YEARS 1980-81 AND 1981-82

		RIBUTION	AMOUNT OF	PERCENT OF
UNIT	7-1-80 to 6-30-81	7-1-81 to 6-30-82	(Decrease)	(Decrease)
Davis County	\$1,370,813.05	\$1,578,321.30	\$207,508.25	15.14
Salt Lake County	11,240,705.69	12,037,102.48	796,396.79	7.08
Weber County	1,932,621.06	2,095.283.92	162,662.86	8.42
Park City	150,847.30	160,338.38	9,491.08	6.29
GRAND TOTALS	\$14,694,987.10	\$15,871,046.08	\$1,176,058.98	8.00

NOTE:

This tax can be adopted by a county or municipality after proper procedures are followed including voter acceptance. The rate is ¼ of 1 percent of net taxable sales and is remitted on the regular quarterly sales tax return. At present only three counties; Salt Lake, Davis and Weber and one city, Park City, have adopted this tax. In the case of Salt Lake, Davis, and Weber Counties, the distribution is made by the Tax Commission direct to the county which in turn distributes the money to the Utah Transit Authority.

SUMMARY OF EXCISE TAXES AND FEES ADMINISTERED BY THE STATE TAX COMMISSION

AUTOMOBILE DRIVER EDUCATION TAX

Rate of tax:	\$2.00 upon first registration by the owner of each motor vehicle each year.
Applicable to:	Owner or operator.
Disposition	
of Revenue:	Automobile driver education account within uniform school fund.
Citations:	Section 41-1-144 through 41-1-146. U.C.A. 1953.
BEER TAX	
Rate of Tax:	\$4.12 per bbl. on all beer: 31 gallon barrel stan- dard measure; licensing under jurisdiction of Utah Liquor Control Commission.
Applicable to:	All beer imported or manufactured for sale, use or distribution in Utah. Monthly reports required of every brewer, wholesaler or distributor manufacturing or importing beer.
Disposition	
of Revenue:	State general fund.

Citations: Section 32-6-1 to 32-6-19, U.C.A., 1953.

CIGARETTE AND TOBACCO PRODUCTS TAX

- Rate of Tax:12¢ per package of 20 cigarettes weighing less
than 3 lbs. per 1,000. 24¢ per package of 20 ciga-
rettes weighing more than 3 lbs. per 1,000. \$10.00
license for retailers and dealers; tobacco pro-
ducts other than cigarettes are taxed at the rate of
25% of manufacturer's sale price. 4% discount
allowed on stamp purchase in excess of \$25.
- Applicable to: Sale, use, storage or consumption of cigarettes and tobacco products. Wholesalers and distributors purchase stamps or use cigarette stamping machines for payment of tax on cigarettes. Quarterly returns required of dealers liable for payment of tax on other tobacco products.

Disposition of Revenue: State general fund.

Citations: Section 59-18-1 to 59-18-19, U.C.A., 1953.

CORPORATION FRANCHISE TAX

 Rate of Tax: Four percent of net income allocated to Utah; \$25.00 minimum tax.
 Applicable to: Corporations having income allocable to Utah or exercising corporate franchise in state. Tax is imposed for privilege of doing business in Utah. Special provisions for agriculture cooperatives and small business corporations.
 Disposition of Revenue: Uniform school fund.
 Citations: Sections 59-13-1 to 59-13-64, and Sections

59-13-78 to 59-13-97, U.C.A., 1953.

CORPORATION INCOME TAX

CORPORATION	N INCOME TAX
Rate of Tax:	Four percent of net income allocated to Utah.
Applicable to:	Corporations deriving income from sources within Utah and not subject to the corporation franchise tax.
Disposition of Revenue:	Uniform school fund.
Citations:	Sections 59-13-65 through 59-13,72, U.C.A., 1953.
INDIVIDUAL IN	ICOME TAX
Rate of Tax:	Graduated rate for single taxpayers 2 ³ / ₄ % on the first \$750, to 7 ³ / ₄ % on \$7,500. Income over \$4,500, at 7 ³ / ₄ + Married filing separate 2 ³ / ₄ on first \$750, to 7 ³ / ₄ % on income over \$9,500. Married filing jointly 2 ³ / ₄ % on first \$1,500, to 7 ³ / ₄ % on income over \$7,500. Federal provisions applicable.
Applicable to:	Resident individuals and fiduciaries having gross income exceeding statutory amounts; nonresident individuals and fiduciaries having defined earnings within Utah; employers liable for employees withholding tax at a percentage (fixed by Tax Commission) of federal withholding requirement or according to Commission op- tional tables; monthly withholding tax pre- payments required upon Commission order.
Disposition	
of Revenue: Citations:	Uniform school fund.
	Sections 59-14A-1 to 59-14A-96, U.C.A., 1953.
INHERITANCE	ΤΑΧ
Rate of Tax:	Utah inheritance tax is the amount of the state death tax credit claimed on the Federal estate tax return. Safe deposit box inventories, waivers of lien, and inheritance tax appraisals not required.
Applicable to:	Estates required to file a federal estate tax return; non-resident estate must prorate the death tax credit.
Disposition of Revenue:	State general fund.
Citations:	Sections 59-12A-1 to 59-12A-15, U.C.A., 1953.
INSURANCE P	REMIUM TAX
Rate of Tax:	Two and one-fourth percent of net premiums upon property and risks located in Utah subject to retaliatory provisions, plus an additional 1% of total premiums on Workman's Compensation and occupational disease insurance.
Applicable to:	Every insurance company doing business in Utah.
Disposition of Revenue:	State general fund, fireman's pension fund and combined injury and benefit fund.
Citations:	Sections 31-14-4 to 31-14-9, 31-21-2 to 31-21-19 and 35-1-68.

LOCAL OPTION SALES AND USE TAX

LOCAL OPTION	N SALES AND USE TAX	
Rate of Tax:	Three-fourths of 1% of purchase price on same transactions as the state sales and use tax laws: Tax Commission acts as agent for local govern- mental units.	
Applicable to:	Same base as state sales and use tax. Retailers liable for tax collections. Purchasers liable for payment of tax on private sales of motor vehicles at time of registration.	
Disposition of Revenue:	To the county, city, or town which levies the tax.	
Citations:	Sections 11-1-1 to 11-9-11, U.C.A., 1953.	
LOCAL TRANSIT AUTHORITY TAX		
Rate of Tax:	One-fourth of 1% of purchase price on same transactions as the state sales and use tax laws apply; Tax Commission acts as agent for local governmental units.	
Applicable to:	Transactions in counties and municipalities where voters have approved imposition of tax to finance local bus service. Retailers and pur- chasers liable under same conditions as ap- plicable for sales and use taxes.	
Disposition	Like Transit Authority or local transit district	
of Revenue: Citations:	Utah Transit Authority or local transit district. Section 11-9-4.	
Citations.	Section 11-9-4.	
MINE OCCUPAT	ΓΙΟΝ ΤΑΧ	
Rate of Tax:	One percent of gross value of products of metal- liferous mines and metalliferous claims; 2% ap- plicable to products of oil and gas wells; value fix- ed at place produced; \$50,000 annual exemption.	
Applicable to:	Occupation of mining ore or metals or producing oil or gas.	
Disposition		

of Revenue:	State general fund.
Citations:	Sections 59-5-66 through 59-5-85, U.C.A., 1953.

MOTOR FUEL TAX

Rate of Tax	Motor Fuel—11¢ per gallon. Motor Fuel for boats—11¢ per gallon. Aviation Fuel—4¢ per gallon. Gasahol—6¢ per gallon. 2% evaporation allowance.
Applicable to:	Sale or use of motor fuels. Importers, refiners and distributors liable for reporting and paying tax to State Tax Commission.
Disposition of Revenue:	Transportation fund, motor boat fuel fund and aeronautical fund.
Citations:	Sections 41-11-1 through 41-11-47, U.C.A., 1953.

MOTOR VEHICLE BUSINESS ADMINISTRATION

Rate of Tax: Annual license fees; new motor vehicle dealer's license, \$80,00; used motor vehicle dealer's license, \$70.00; new motorcycle, motor scooter and small trailer dealer's license, \$60,00; motor vehicle manufacturer's license, \$60,00; dismantler's license, \$50.00; motor vehicle crusher's license, \$60.00; motor vehicle remanufacturer's license, \$60.00.

Applicable to:	Persons, businesses or conditions stated above.
Disposition of Revenue:	State general fund.
Citations:	Sections 41-3-2 thorugh 41-3-27, U.C.A., 1953.
MOTOR VEHIC	LE CONTROL FUND
Rate of Tax:	Fees for motor vehicle certificates of title, \$2.00 duplicate certificates of title or registration, \$2.00.

Applicable to:	Owners or operators.
Disposition	Transportation fund.
of Revenue:	Sections 41-1-133, 41-1-137 and 41-1-141, U.C.A.,
Citations:	1953.

MOTOR VEHICLE REGISTRATION

Rate of Tax:	Fees including reflectorized plate charges are ten dollars for ordinary passenger cars; \$7.50 for motorcycles; commercial vehicles on gross laden weight schedules ranging from \$12.50 to \$555.00, for combinations of weight from 6,000 lbs. to 78,000 lbs;; farm trucks ranging from \$12.50 to \$115.00, for combinations of 6,000 lbs. to 42,000 lbs.; trailers over 750 lbs. \$8.00, less than 750 lbs.—\$5.50; some fees are reduced for periods of less than one year.
Applicable to:	Owner or operator.

Disposition	
of Revenue	Transportation fund.
Citations:	Sections 41-1-1 to 41-1-141, U.C.A., 1953.

NINETY-SIX HOUR TEMPORARY PERMITS

Rate of Tax:	Percentage of Utah miles traveled multiplied by equivalent tax according to weight. 6,000-18,000 lbs \$100 equivalent tax 18,001-33,000 lbs 200 equivalent tax 33,001-48,000 lbs 300 equivalent tax 48,001-63,000 lbs 450 equivalent tax 63,001 lbs. or over 600 equivalent tax Temporary 96 hour permit—\$20.00 for single units and \$40.00 for multiple units.
Applicable to:	Qualified nonresident commercial motor vehicle operators in lieu of annual registration.
Disposition of Revenue: Citations:	Transportation fund. Sections 41-1-88, U.C.A., 1953.
SALES TAX	
Rate of Tax:	Four percent of retail sales and rentals of tangi- ble personal property; 4% of retail sales of meals, admissions to places of amusement, in- trastate communication and passenger service, electric, gas and heat utility service, hotel and motel accommodations and certain other ser- vices; extensive exemption provisions, retailer license issued without fee.
Applicable to:	Retail sale of tangible personal property and ser- vices listed above. Vendor collects the tax ex- cept that purchaser of a motor vehicle from a

person other than a licensed dealer is liable for the payment of the tax at the time of registrations.

Disposition	
of Revenue:	State general fund.
Citations:	Sections 59-15-1 through 59-15-22, U.C.A., 1953.

SCHOOL LUNCH TAX

Rate of Tax:	Eight percent of retail sales price of wines and dis- tilled liquors sold by liquor control commission.
Applicable to:	Sales of wines and liquors. Collected at time of sale.
Disposition of Revenue:	Uniform school fund to be apportioned to local board of education for school lunches.
Citations:	Sections 53-8-1 through 53-8-5, U.C.A., 1953.

SPECIAL FUEL TAX

- Rate of Tax: Eleven cents per gallon for fuel (other than gasoline) used in propelling motor vehicles upon highways in Utah; governmental exemption; 4 cents per gallon for aircraft fuel.
- Applicable to: Sale or use of special (diesel) fuel. Dealers required to collect tax on fuel placed in service tanks of motor vehicles. Returns are required of all users and user-dealers.

Disposition of Revenue: Transportation fund.

Citations: Sections 41-11-49 through 41-11-76, U.C.A., 1953.

TRANSIENT ROOM TAX

Rate of Tax: Up to 3% as fixed by county ordinance, of defined accommodation charges; Tax Commission acts as agent for counties. Applicable to: Persons doing business as motor courts, motels and hotels. Disposition of Revenue: Counties which impose this tax to establish, promote and finance recreational tourist and convention promotion bureaus. Citations: Section 17-31-7, U.C.A., 1953. As enacted by Chapter 35, Laws of Utah, 1965. USE TAX Rate of Tax: Four percent of amount paid for tangible personal property purchased for use, consumption or storage in Utah; includes rentals in lieu of purchase and services of repair, renovation and certain installations of tangible personal property. Applicable to: Transaction indicated above. Licensed vendors liable for collection of tax; purchasers liable for collection of tax; purchasers liable if not taxed by vendor. Disposition of Revenue: State general fund. Citations: Sections 59-16-1 through 59-16-25, U.C.A, 1953. As amended by Chapter 163, Laws of Utah, 1967; Chapter 14, First Special Session, Laws of Utah, 1969. Effective July 1, 1969.

PROPERTY TAXATION OF POWER COMPANIES

DEFINITION OF POWER COMPANY

A power company produces, generates, transmits, delivers, or furnishes electricity for light, heat, or power.

AGENCY RESPONSIBLE FOR ASSESSMENT

The State Tax Commission must assess power lines and plants, when they are operated as a unit in more than one county, and all property of public utilities whether operated within one county or more. (59-5-3)

Currently the State Tax Commission assesses power companies operating in one county, because it is presumed they are public utilities.

Power plants owned by muncipalities are exempt from ad valorem taxes; however, Provo City which bought a portion of Utah Power & Light's Hunter plant, pays a fee in lieu of tax equivalent to what the ad valorem tax would be. Section 54-9-5 Utah Code Annotated provides that any city acquiring an interest in facilities necessary to the generation, transmission or distribution of electric power by thermal means may contract with a county to pay to the county in which the facilities are located, an annual fee in lieu of ad valorem property taxes based upon the assessed valuation of the percentage of the ownership share of the city.

HOW POWER COMPANIES ARE ASSESSED

Three indicators of value are used to estimate the fair cash value of Utah Power & Light. These three valuation methods and the percentage of weight applied to each is as follows:

Cost	50%
Income	45%
Stock & Debt	5%

The stock & debt indicator of value is not used for any power company other than Utah Power & Light. For most other power companies, equal weight is given the cost and capitalized net income indicators of value.

The unitary approach is used in valuating interstate power companies; this means the value of the entire company is determined, whether it spans over several counties or several states. The value of the total company is then allocated to Utah and the values in various counties are then apportioned to the taxing districts.

COST APPROACH

Net book value, which is original cost minus depreciation, is used. Original cost is used rather than replacement cost, because original costs are utilized in the determination of the rate base for regulation purposes. A public utility can earn no more than its rate base times the allowed rate of return. Since the utility can earn no more than its original cost less depreciation times rate of return, the value of the utility can be no more than the original costs.

CAPITALIZED NET INCOME

Simply stated, capitalized net income = net income – capitalization rate. Although the formula is simple, the procedures for determining net income and the capitalization rate are lengthy and complicated.

An appropriate income stream is not derived by merely subtracting expenses from gross income. That is only one net income figure which may be considered. Other income additives are calculated by including the present value of construction work in progress in the income stream, and/or by projecting net income based on performance ratios. Projections of income are computed for growth utility companies because their net income for the previous year would not be a reliable estimate of future income.

The first net income figure mentioned above is derived in the following manner:

- -Operating Revenue
- -Operating Expenses
- Depreciation (Federal Energy Regulatory Commission Rates)
- -Taxes other than Income
- -Federal and State Income Tax
- -Provision for Deferred Income Taxes
- —Investment Tax Credit

= Net Operating Income

In determining the net income of Utah Power & Light, twelve estimations were computed. The assessor judged what an accurate figure should be based on the twelve estimations.

The net income figure for other power companies may be the past year's net operating income, a three-year or five-year average of net income, or a three-year or five-year weighted average.

CAPITALIZATION RATE

A capitalization rate is computed for Utah Power & Light and one or more points are added to derive the capitalization rate for the small power companies which are also associated with greater risk.

The band of investment method is used in calculating the capitalization rate.

Example

Debt = 40%

Equity = 60%

Direction: rising

UP & L = 15%

A = 18%

AA = 15%

AAA = 13%

 $12 \times .40 = 4.8$

 $15 \times .60 = 9$

Average weekly yield = 11%

Estimated bond yield = 12%

Estimated stock yield = 15%

13.8% =

capitalization rate

1. The first step is to determine the capital structure of the company-the percentage of debt and the percentage of equity.

2. Secondly a bond yield must be estimated. The average weekly yield on public utility bonds as reported by Moody's is considered along with the direction of the yield.

3. An estimated stock yield is computed. The assessor creates a sample of A, AA, and AAA rated power companies. The price earnings ratios of their stocks are converted to rates of return. UP & L's rate of return is compared to other rates of return and a stock yield is chosen which best reflects the rate of return demanded by investors.

4. The estimated bond yield is multiplied by the percentage of debt and the estimated stock yield is multiplied by the percentage of equity. The sum of these two figures is the capitalization rate.

STOCK AND DEBT METHOD

This market value indicator is designed to measure value of securities and debt supported by underlying property. The method is generally considered a direct substitute for sales value of the properties themselves.

The basic approach consists of the use of representative price levels applied to the number of outstanding shares of stock and units of debt. The reasoning is that a purchase of all interests represents essentially an acquisition of all assets.

TAXPAYER'S STATEMENT

To save paperwork by the power companies, for property tax purposes they submit to the State Tax Commission a copy of their report to the Federal Energy Regulatory Commission. The FERC report is deemed fairly reliable because FERC auditors are constantly auditing utilities.

ALLOCATION

After a unitary assessment is made of a power company operating in more than one state, the next step is to allocate the portion of the total value belonging to Utah. To illustrate this process, the allocation of a fictional company is provided below. The name of the company is Four Corners Electric Company. It operates in Utah, New Mexico, Colorado, and Arizona.

1. Compute unitary value.

2. A separate valuation of the entire company is calculated based on historical cost and adjusted for production and sales. The method of valuation for allocation purposes illustrated is similar to the method used with Utah Power & Light.

= 500,000Capitalized Net Income \times 45% = 950,000 $\times 45\% = 427,500$ Stock and Debt Value × 5% $= 900,000 \times 5\%$ = 45,000 = Unitary Value = \$972,500

 $= 1.000.000 \times 50\%$

Net Book Value × 50%

Production Plants

75% × historical cost $10\% \times capacity$ 15% × kilowatt hours generated

Distribution Plants

 $50\% \times$ historical cost 10% × kilowatt hours sold $40\% \times gross revenue$

Other Plants

	VIIIOI I IAIIIO
	— 100% historical cost Transmission General offices Construction work in progress Plant held for future use Materials and supplies Steam heat
	Production Plants = \$372,500 Distribution Plants = 300,000 + Other Plants = 200,000
	Value of Plants in Total Company = \$872,500
3. Since this valuation is con- structed by summing the values	Production Plants in Utah \$ 0
of plants and equipment, it is	Distribution Plants
easy to separate out the value	in Utah 100,000
located in Utah.	+ Other Plants in Utah = 0
	Value of Plants in Utah = \$100,000

4. The percentage of plant value located in Utah is calculated

\$100,000 = 11.5% = Percent of plant \$872.500 in Utah

5. This percentage is multiplied by the total value derived by the unitary valuation method. The resulting amount is value allocated to Utah.

 $972,500 \times 11.5\% =$ \$111,837.50 = Value Allocated to Utah

APPORTIONMENT

The value allocated to Utah is multiplied by 20% to determine the assessed value of the company in Utah.

Value of Four Corners		Assessed Value
Allocated to		of Four Corners
\$111,837	× 20% =	\$22,367

The next task is to apportion the assessed value to the various counties. This procedure involves several steps. The example of Four Corners Electric Company will continue.

1. The state Tax Commission has an appraiser appraise the market value of the company's land and major buildings.

personal property.

2. The market values of the land and major buildings is each	Market Value Assessed of Land Value
multiplied by 20% to determine the assessed values of the land	$10,000 \times 20\% = 2,000$
and buildings any statutory ad-	
justments necessary for equali-	Major Buildings Value
zation.	$40,000 \times 20\% = 80,000$
3. The assessed value of the	\$22,367
land and major buildings is sub-	- 2,000
tracted from the total assessed	- 8,000
value in Utah to determine the assessed value of remaining	= \$12,367 = Assessed value

of the remaining personal property.

4. The power companies submit returns to the State Tax Commission which list all their land, buildings, and other personal property, their locations, and original costs. From these returns the state assessor computes total cost of all property, cost of land, and cost of the major buildings.

5. The land cost and major building cost are subtracted from the total cost to calculate cost of the remaining personal = \$ 68,000 = Cost of remaining property.

6. The assessed value of the remaining personal property and buildings is divided by the cost of the remaining personal property and buildings to compute a percentage. This figure shows how the assessed value of the remaining personal property compares to the cost of the remaining property. The assessed value is a percentage of the cost.

7. This percentage is multiplied by the cost for each remaining item of personal property and the cost of buildings which were not appraised.

8. The assessed values of the land, major buildings, and remaining personal property and buildings are then apportioned to the counties according to the locations of the properties.

Cost of Total Property = \$100,000 Cost of Land 7,000 = Cost of Major Buildings 25,000 =

\$100,000 - 7,000 - 25,000

personal property and major buildings

 $\frac{12,367}{12,367} = 18.1\%$ \$68,000

Assessed value = 18.1% of the cost

Cost Assessed Value of Computer of Computer $4,000 \times 18.1\% = 724$

The task of apportioning each item of Utah Power & Light's property is monumental. To ease the burden of the State Tax Commission, the company has agreed to apportion the assessed values themselves. The State Tax Commission provides UP & L with the assessed value of the land and major buildings and the percentage to multiply with the cost of the remaining items of personal property.

COMPARISON OF METALLIFEROUS, NON-METALLIFEROUS, AND OIL AND GAS ASSESSMENT IN BRIEF

Metalliferous	Non-Metalliferous	Oil and Gas
Revenue from Ore Produced and Sold + Value of Ore Produced but not Sold	Revenue from Minerals Sold + Value of Self-Consumed Minerals + All Other Sources of Income	Revenue from Oil and Gas Sold + Value of Unsold Oil and Gas – Windfall Profits Tax
= Gross Proceeds	= Gross Income	= Gross Realization
 Wages, Salaries of Management (Corporate Officers excluded) Payroll Taxes and Benefits Supplies, Tools, Power Maintenance and Repair Office, Engineering Assaying, Sampling, Milling, Concentrating¹ Transportation of Ore Workmen's Compensation Depreciation (Same as Federal Return) Utah State and Local Taxes State Unemployment 	 Wages, Salaries of Management (Including % of Corporate Salaries Pertaining to Utah) Payroll Taxes and Benefits Supplies, Tools, Power Maintenance and Repair Office, Engineering Assaying, Sampling, Treatment Transportation of Minerals Workmen's Compensation Depreciation (Straight Line) Taxes (Excluding Federal and State Income Taxes) Legal Fees Royalties Depletion General Insurance Development Expenses 	– Compression Charges (when applicable)
= Net Proceeds	= Net Income for Ad Valorem	= Value at Well
2 × 3-Year Average Net Proceeds ² + \$10/Acre + 20% Value of Fee Land + 20% Value of Machinery and Improvements	5-Year Average of Net Income – Capitalization Rate (Safe Rate + Risk Rate + Tax Factor + Liquidity Factor) × Assessment Level	Value at Well × Percentage of non-Exempt Ownership Interests × 80% + Value of Well Equipment ⁵ × 20% + 20% of Value of Buildings
= Assessed Value	= Assessed Value ³	= Assessed Value

¹Milling and further treatment is not deducted if the facilities are used exclusively for the mine owner's use. (i.e., Kennecott)

²The value of net proceeds never is less than 0.

³The assessed value can never be less than the value of a non-producing mine. In the event the capitalized net Income method leads to a value less than a non-producing mine, then the assessed value is equivalent to 20% of the fair cash value of the land, machinery, and improvements. ⁴Typically oil and gas properties are located on government land and a 12.5% royalty is paid.

⁵Flat well schedules are set for flowing and pumping wells.
